>Now wait a minute here, Podner. CEbers know all about rules,
>regulations and safety. They just ignore them.

Your right, so I guess we can forget about them also for testing, I guess were finally down to what is Modern and in the 21st Century. So I guess my suggestion before makes sense, lets just have an application that asks for name, adreesse, and what would you like your Handle to be.
Then when there License arrives they could also attach a WEB Addreesse for ARRL. Where they could go and read about REGS and so forth if they wanted to know. The above makes sense since we are being told that this is just an entry point for learning. And since CW is just a Mode, like any other Mode, if they want to operate CW then they can learn CW when they fell like it, if they so desire. Same principle should hold true with Theory, if at some point in the future, they decide they would like to learn about theory they can learn then. So again tell me why we really need any kind of TESTING.

3443. The way it was (in Canada)

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-08 07:35:25 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <9nchnt$69t$1@news.hawaii.edu>
Source record: 19687

Was deleting old files and found this:

My own first experience was in Canada with the Department of Transport examiner in Montreal. I remember it very well. The test consisted of several parts, including an oral grilling. The first element was CW receiving. In those days the examiners were real Radio Inspectors and know their stuff. They were very intimidating. They had all been radio operators before getting office jobs. The RIs in the Montreal office used CW as a form of intercom. Each had a key and oscillator on their desks. I was ushered to the RI's desk and he handed be several sheets of paper and a pencil. "Wait here" he told me and walked away. I remember seeing what looked like a couple of 51J-(3 or 4 receivers in a rack (obligatory Collins content!). A few minutes later I heard some code coming from his intercom speaker. It was a message for him about some regulation change so I copied it down for him as a last minute practice session. When he returned I handed him the message and he told me I had just passed my Morse Code receiving test.

Then I was given the key and told to send. He made me do it for five minutes at 10 WPM. Then the written, three elements, regs, theory and eight schematic (not block!) diagrams. Finally the RI collected my sheets and told em to wait. It wasn't over - there was the final element - the oral! It seemed like an hour but in reality was about ten minutes of questions based on my schematic diagrams with a few regulatory questions thrown in for good measure.

I only found out I passed five days later when my Certificate of Proficiency in Radio arrived by Registered Mail. I was then "invited" to go down to the DoT office to apply for a station licence which I did immediately.

There was no two meter CB as we know it today. Repeaters were just starting to be built and all equipment was ex-commercial gear. Most of us had little or no interest in VHF. Most of the action was on HF with some six meters thrown in for good measure. My first licence authorized A1 only up to 30 Megacycles. After six months we were allowed to take our log down to the DoT to prove that we were operating out stations on a regular basis to apply for an endorsement to operate A3 on 10 Meters. After a full year had elapsed we were allowed to sit for the Amateur Advanced certificate which allowed full phone privileges. The test was nothing compared to the first one.

Today's amateurs don't know what they missed! Wouldn't trade the experience for a fist full of "slow code extra" tickets!

Thanks for the memories, guys!

>> Why do you insist on everyone being equipped for CW/Morse if
>> you never expect it to be the best choice for emergencies?

>"Expect the unexpected"

Why, then, do you not insist on everyone being equipped with a *station* to be used in emergencies? Why do you feel that knowing Morse code is more valuable than having a transmitter?

Are you sure you don't want them to know Morse code just because you want some of them to operate your favorite mode and think that no one will unless a licensing requirements requires them to learn it? IMHO, it the issue really were emergency preparedness, there are a lot more important things to require than learning the code, yet you don't seem to want to require any of them.

I don't know as I had "all that much" to do with it, and you are right -- I do have plenty to do otherwise, but I have been steadily bringing my input literally to the table as the HQ question-pool team all find time with plenty to do otherwise and meet in the cafeteria and put together ARRL's input to the QPC. I will continue to do so.

And, you know it is true because I told you about it. :-)

Dick may have been "persistent," but I don't think he has been whining. (I wouldn't necessarily say that about everybody that posts here...) And his having decided that the question pools are not without merit does not mean that he, and I, don't still see room for improvement. I don't think you or I ever doubted that -- we just disagreed that it was practical to learn all that material.

Are you sure your question wasn't intended more to keep the disagreement going than to result in productive change in all of our ways of thinking?

>If and when S25.5 goes away, how long do you think the USA will have code
>testing for any class of ham license? I say it will last just as long as it
>takes FCC to act on the paperwork to eliminate it.

More than likely, but the "fat lady singing" in this case will when the treaty change, assuming it happens, is ratified by the Senate. I know an organization that has the petition ready to file.

>The FCC has said more than once that the ONLY reason code testing is retained
>is because of S25.5. Do you think they will keep code testing without S25.5?
>I don't.

Nor do I. For that reason, the only method that hams will have to encourage others to learn and use the mode is to do the same thing that proponents of other modes do to encouage the use of their favorte modes -- encourage others to use it.

For that reason, I believe those that support the continued use of Morse code in the Amateur bands, and I count myself among them, should be careful that the words they choose today about Morse code, in what I believe to be a futile attempt to preseve code testing, are such that their words today would serve to encouage others to learn and use the mode in the absence of a code test.

>Game over. Thank you for playing.

When it comes to code use, the game will not be over for as long as this old brasspounder can still toggle the paddles on his keyer. :-)

>been on the air. Why would you think that is an achievement?

EE degrees are more than a dime a dozen, and it takes 2 years of full-time study to get the most basic one. And 50 years as a ham may mean that someone passed his entrance exam and has had a five-decade long career of operating, learning and contributing. Why would you presume that it is not an achievement.

I would wager that more 50-year hams have passed their exams have been on the air than cheated on their exams then never operated.

Source record: 19697

BUT I don't think that is justification for having the CW mode be a part of any amateur radio operating license, nor do I believe that is justification for a "mandate" that all in emergency communications should know (note the use of the word 'should') CW.

I think that the heavy emphasis on CW as this magical, mystical emergency communications mode causes a great deal of confusion. I can't help but wonder why someone who loves the mode has no argument for its inclusion in testing other than that it will benefit emergency communication [paraphrased]. *IF* passion for emergency communication for the benefit of public safety is the motivation, then why not support and realize that no one mode should be advocated--*all* modes available should be advocated? The argument that CW "will get through" when no other mode will just doesn't fly any more. There are so many other modes available, some even with video.

That is my reticence to have CW be a part of the testing scheme: it proves no technical aptitude [if that is what we're testing for have the testee design, build and implement a packet station or some such]; CW proves nothing in the way of being a better communicator [if that's what we're testing for have the testee sit with an elmer and break through some pileups, send formal written traffic, and act as ANCS during a training net]; and CW knowledge has little to do with the overall hobby of ham radio [if that is what we are testing for have the testee know the history of ham radio].

On the other hand, if CW testing is supposed to be a filter to keep unmotivated individuals out of the hobby then keep it because it does work well for that. The attitudes of some people, concerning the restructuring step that decreased the focus from CW, is obvious testimony to that.

Seems you are pretty disgusted with ham radio, eh? Tell us why you insist on being involved with something that makes you so miserable. And, why in the world would you be placing yourself among those whom you see as being beneath you? It's much more challenging if you'll find a group of people you respect and admire and hope to become equal with. Taking the easy way, are you?

>> band (CB) radio). Home-based businesses may also operate radio
>> stations. This fact sheet addresses inspection of radio stations in
>> both the commercial and residential settings.
>>
>> Frequently Asked Questions Related to Residential Inspection
>>
>> of Radio Equipment by the FCC
>>
>> Q: Why must operators of radio frequency devices allow the FCC to
>> inspect their equipment?
>>
>> A: The Commission must ascertain essential facts pertaining to the
>> operation of a station which may be vital to the resolution of a
>> number of questions, including interference problems involving
>> public safety. For this reason, the FCC must be able to check all
>> covered equipment that have the potential to emit radio frequencies.
>> Section 303(n) of the Communications Act gives the FCC this
>> authority.
>>
>> Q: What happens if I do not allow the FCC agent to inspect my
>> equipment?
>>
>> A: Failure to allow inspection forecloses the opportunity to resolve
>> the problem. Thus, refusal to allow inspection is a serious
>> challenge to the Commission's authority to inspect radio stations
>> and is a violation of the Rules. Such a refusal may lead to
>> revocation of a license, maximum monetary forfeiture, or other
>> Commission sanctions.
>>
>> Q: The FCC Agent standing at my door does not have a search warrant,
>> so I don't have to let him in, right?
>>
>> A: Wrong. Search warrants are needed for entry involving criminal
>> matters. One of the requirements as a licensee, or non-licensee
>> subject to the Commission's Rules, is to allow inspection of your

>> radio equipment by FCC personnel. Whether you operate an amateur
>> station or any other radio device, your authorization from the
>> Commission comes with the obligation to allow inspection. Even radio
>> stations licensed under a "blanket" rule or approval, such as
>> Citizen's Band (CB) Radio, are subject to the Commission's
>> inspection requirement.
>>
>> Q: Well then, if I am a low-power broadcaster and don't have an FCC
>> license, they need a search warrant, right?
>>
>> A: Wrong again. The FCC agents have the authority to inspect all
>> radio equipment; even if you do not have a license, the FCC can
>> still inspect your equipment. Section 303(n) of the Act gives the
>> FCC the right to inspect all "stations required to be licensed."
>> This language covers your low-power radio station. The FCC agents
>> are inspecting the equipment, not searching your house.
>>
>> Q: Okay, I understand now why the Agent doesn't need a search
>> warrant, but how do I know what the Agent will do next?
>>
>> A: Once you open the door, the agents should show their FCC
>> identification card and badge, identify themselves by name and
>> agency, and should state the purpose of the visit. They then should
>> request permission to inspect the radio station. The agents may also
>> ask to see records such as licenses for the station or operator.
>> Agents, however, should never open private cabinets, drawers, or
>> other private items in the search for license documents.
>>
>> Q: Can the agents come to my residence at any hour of the day or
>> night to conduct an inspection?
>>
>> A: FCC Agents inspect during the hours of operation. If you are
>> operating your station during late or unusual hours you cannot use
>> the time element as justification for refusing to permit an
>> inspection at that time. You cannot avoid an inspection by electing
>> to operate only during late or unusual hours.
>>
>> Q: The FCC Agent said that I had to allow inspection of my radio
>> station without unnecessary delay. What does "without unnecessary
>> delay" mean?
>>
>> A: Immediate on-the-spot inspections are generally necessary. In
>> most cases, any delay can result in changed conditions of the
>> transmitting equipment or its operation, adversely affecting the
>> efficacy of the inspections. For that reason, Agents cannot return
>> at a later time to accommodate the operator, cannot wait for the
>> operator to make any adjustments to the equipment, and cannot spend
>> time repeating the reasons for the inspection.
>>
>> Q: Why don't the FCC's agents have to make an appointment with me to

>> inspect my equipment?
>>
>> A: The Commission has no means of determining whether a station is
>> being operated as licensed except through immediate on-the-spot
>> inspection. To establish the amount of operating power of a station,
>> the input power of the last radio stage of the transmitter must be
>> actually measured with test equipment. To delay an inspection for
>> the convenience of a licensee would allow the licensee time in which
>> to modify or restore the transmitter to its licensed condition, thus
>> permitting the licensee to avoid detection. This same theory also
>> applies in the case of whether a station is operating with an
>> unapproved type of transmitter.
>>
>> Q: What can happen to me if the agent determines that I am using
>> illegal or unauthorized equipment?
>>
>> A: There are several different ways that this situation can be
>> handled. You may volunteer to surrender the equipment to the agent
>> who will then destroy it under FCC procedure. If you choose not to
>> surrender the equipment, the FCC can bring a proceeding against you
>> to take the equipment. This is known as an in rem (i.e., property)
>> forfeiture proceeding . Additionally, if you choose not to surrender
>> the equipment, you can be issued a civil monetary forfeiture
>> penalty. See 1997 Forfeiture Policy Statement 12 FCC Rcd
>> 17087(1997).
>>
>> Q: Am I required to surrender any illegal or unauthorized equipment
>> to the agent?
>>
>> A: No, surrender is voluntary. However, it is the best way to avoid
>> a large monetary forfeiture.
>>
>> Q: Is the inspection procedure for various services different? Is
>> the procedure different for licensees and non-licensees?
>>
>> A: The inspection procedure is essentially the same for all of the
>> services. Similarly, the inspection procedure is the same for
>> licensed and non-licensed stations. This is because the FCC has the
>> right to inspect ALL covered radio equipment.
>>
>> Frequently Asked Questions for the Business Environment
>>
>> Q: FCC Agents arrived to inspect the radio at my office. My boss
>> isn't here. Should I call my boss to be present for the inspection?
>>
>> A: You may call your boss if you wish. If the company is open for
>> business, however, the inspection should be permitted regardless of
>> whether your boss is present. This is not an acceptable reason to
>> delay an inspection.
>>

>> Q: My boss didn't tell me anyone would come by to inspect our radio
>> so I don't have to let the FCC inspectors in, right?
>>
>> A: Wrong. The licensee is responsible for knowing the rules and
>> those include the FCC's right to inspect. Because the employer is
>> responsible for the acts of the employee, it is up to the
>> licensee-employer to inform its staff as to its responsibilities
>> concerning the operation of the radio station.
>>
>> Q: I run a small daytime only AM station. Do I have to allow the
>> agents to inspect the station late at night?
>>
>> A: The FCC inspects during hours of operation. Thus, a day time
>> station, by definition, should not be operating at night. If FCC
>> agents determine that radio signals are emitting from the daytime
>> station during night time hours, however, an inspection must be
>> allowed if requested by an FCC agent.
>>
>> Q: How do I know that these are really agents from the FCC?
>>
>> A: FCC Agents have a badge and credentials with their names and the
>> FCC seal which they will present to you when requesting your
>> permission to inspect. If you would like to further confirm their
>> identity, you may call the FCC's Crisis Management and
>> Communications Room in Washington, D.C., at (202)632-6975. It is
>> open 24 hours a day, 365 days a year.
>>
>> Q: If an agent is testing my FCC authorized equipment and the
>> equipment breaks or malfunctions during the tests, is the FCC
>> liable?
>>
>> A: If the agent was negligent, you may have a claim under the
>> Federal Tort Claims Act (FTCA) to recover damages for your property.
>> The FCC will make the initial determination whether the agent was

That's my argument, Ed. It's the "long career of operating,
learning and contributing" that is important. By itself, the
length of time someone has been licensed is unimportant. It's
not how long that is important. It is what was accomplished
that is important.

>Kim W5TIT

Bragging rights were codified in law with the so-called Incentive License plan and firmly cemented with the Vanity Call sub-parts of Part 97. US amateur radio didn't die then...but it CHANGED to make the bragging LEGAL. :-)

Kelly is having a fun time trying to make fun of others less skilled at morse code and a long time-in-grade as an extra. That's a form of bragging, a form of showing "superiority" over others...for the braggist's personal pleasure.

Such bragging does irritate me, yes, but only to a minor degree. What does and has bothered me for years, on and off, is the continual insistence that such qualities ("ham radio is all about CW on HF," and other Morse Myths) somehow "define" amateur radio's "experts." What really happened is that these old-timers managed to get into a position of influence at the ARRL and had the ARRL lobby the FCC to keep those "standards." They did that for years but the newer access to the government via the Internet, the dissemination of rule-change notices through the Internet has bypassed the ARRL. US radio amateurs no longer have to get information second-hand nor do they have to go through (by the League's insistence) their Section Director to "communicate their desires." Everyone, ham or non-ham, can go DIRECT to the FCC. The control of influence/lobbying of the FCC by the ARRL has eroded. This disturbs many who Believe in Big Brother to do the lobbying for them. Tough. The PUBLIC spoke and the FCC listened. 99-412 happened.

I'm going for Amateur Extra "out of the box." Maybe I'll make it, maybe not. The personal point is irrelevant. What 99-412 really means is that there is no longer any time-in-grade "seniority" nor any morsemanship that indicates "superiority" of those bragextras. That applies to EVERYONE who wants to try...without all the artificialities of adhering to standards and practices of the 1930s held in place by old men trying to relive their youth by bravado and braggadoccio.

I'm another "old man," a retired professional in radio-electronics engineering. Some of those tenured old men of US ham radio don't seem to want anyone with practical, professional and academic skill in radio and electronics technology. They seem to fear those who have industry-proven capabilities because that doesn't fit into their standards...or because they are

insecure in not really knowing what goes on behind
the front-panel of their factory-built equipment. They
have difficulty in trying to put down those who know
practical theory so they try to make fun of them
instead...using their license paper as a "diploma"
and their HF CW tenure as some kind of "PhD" or
"professorship" of radio. Radio theory is somehow
imbued by spending hours working rare DX at high
rates, therefore some of those old men are "expert."
:-)

When 99-412 goes into real restructuring in April, it
won't change some of those tenured old men of US
ham radio. They will be bitter, boastful, and express
contempt of newcomers, some of which will have the
exact same government-granted rank/status/privilege
as all those old men who claimed they "worked" for
theirs. Human nature doesn't change. Neither have
they.

Len

END QUOTE

I don't see you writing the word "if" anywhere in that post. Where is it?

>There isn't one, is there?

You did not specify a date. That does not change the fact that you haven't done
what you said you were going to do.
>
>Has James Miccolis ALWAYS said what he is going to
>do and ALWAYS accomplished that?

In other words, you admit that you said you were going to do it and haven't. To
distract attention from that point, you attack me, using my full name.

> Get real, no
>human is that "perfect."
>
How do you know? We're talking about something you said you were going to do,
here, in public, on rrap. Hasn't happened yet.

>Now...how about I challenge you?

Why go through the motions?

> Let's see YOU take
>some of the tests I did in the past and see how well
>you can do?

There you go again, Len - focusing on the tests YOU took. Why do you want to
live in the past?

This is an amateur radio newsgroup. The discussion is about tests for an amateur radio license.

>You can't do it, Jimmy, can't pass them.

The ones that are not available cannot be passed by anyone.
>
>Do you really want to live in the past?

You seem to - focusing on the tests YOU took so long ago.

> If so, get off the
>newsgroup stuff and go invent a time machine.

In other words, you want me to shut up because I point out the facts too often.
>
>Oh, and you DID say I was "full of myself" in a recent
>posting. [see some irrelevant discussions of electronic
>experiments and projects on oscillators] :-)

When? Provide the post, like I did. C'mon, Len, you say you know something about computers. Go to google and dig up the post where I wrote that.
>
>Now that you've lived happily in the past for a while, why
>not come out to the present and live for the future?

Ah, the old ad hominem attack when shown the truth. Shoot the messenger. Typical.

Lennie, you have to be The King Of Cowardly Excuses.

>Has James Miccolis ALWAYS said what he is going to
>do and ALWAYS accomplished that? Get real, no
>human is that "perfect."

No...they are not. But this was one specific task which you said you WERE
going to do. You haven't done it, not that anyone here expected you to live up
to it.

We (yes, WE) didn't expect you to live up to it and you didn't let us down.
I expect your entire life has been a lot of half-hearted promises to do
something left yet undone. That explains your lack of accomplishment here.

>Now that you've lived happily in the past for a while, why
>not come out to the present and live for the future?

This "challenge" made by someone who can't make ANY point without
regressing to 1950-something and reminding us of his dallying with KW HF
stations in the Army.

Lennie, you switch your two faces so fast I need to hold on to something
to keep from losing my balance.

As always...

>effective speeds close to that of voice radio.

This is not true. When I read this post I had to try an experiment. Put on any broadcast
radio station and count how many words there are in a 1 minute of time. It will be way
above 120 wpm. Even if you listen to a radio talk show, the people that call in talk at 120
wpm. To state that a good operator can send and receive code at 120 wpm or faster is
absurd. Next try talking at 60 wpm. That is one word per second. You will sound like you
had a stroke. I am not a big fan of code, but I do realize there is a place for it. If you are
going to argue for code, don’t make statements that are untrue

Why not? Just how far do you really want to take this?

>
> Are you sure you don't want them to know Morse code just because you want some
> of them to operate your favorite mode and think that no one will unless a
> licensing requirements requires them to learn it?

Yeah, I'm sure, Ed. I suppose I have a different outlook on hams
knowing and being able to *use* CW than the average. No doubt it's from
my life experiences, for I know that this viewpoint developed over time.
I haven't always had that belief. I know that 15 or 20 yers ago if you
had asked I'd have said that the code will be gone by the turn of the
century. However,after experiencing a couple of major failures of more
modern comm systems, a good look at a really modern trunked system, with
its glowing attributes and also a look at what happens when it *really*
stop working-at that point you really ARE out of communications-these
things are what altered my opinion over time. Then consider that every
HF ham rig built has CW capibility automatically built into it, sitting
there ready for an operator to use, and consider that CW works in
conditions where voice modes cannot, coupled with the knowledge that
other digital modes require much more hardware/software overhead which
means that they are not available more often than not, it just makes
sense for hams to equip themselves to be able to handle traffic on CW.
Anything less shows that hams who refuse to do so are irresponsible.

IMHO, it the issue really
> were emergency preparedness, there are a lot more important things to require
> than learning the code, yet you don't seem to want to require any of them.

IMO the FCC would be well within its charter to require licensed hams
to keep station equipment for use as long as they hold an active
license. Of course that won't happen and no one is suggesting it should.
But is is curious how any ham can expect to communicate on radio without

equipment.

>
> I think that the heavy emphasis on CW as this magical, mystical emergency
> communications mode causes a great deal of confusion.

Yeah, you're confused, all right, no surprise there. No one ever said
any such thing, nor in any way implied it. CW is no panacea, it is just
the most simple, most basic RF Communications mode, that works under
conditions which put voice modes out of business. But it *does* require
an operator to discipline himself to learn to use it. The fact that you
and others refuse to undestand this simple fact says a lot about your
selfcentered attitude toward the entire emergency communications issue
within ham radio.

I can't help but
> wonder why someone who loves the mode has no argument for its inclusion in
> testing other than that it will benefit emergency communication
> [paraphrased].

You *assume* I love it, wrongly as it turns out. You (many of you)
assume that because I advocate hams knowing how to use CW that it is
because I love CW. No. I appreciate it for what it is- the most basic,
simple to implement radiocommunications mode. If I "loved" it, I would
be a 35-40 WPM operator instead of a nominal 20 WPM op who doesn't havt
that much time to devote to it- but I have too many other things going
on, yeah, in retirement.How many TNC's do YOU have? I have three, and
three computers with sound cards. I still do occasionally get down on CW
and make an occasional contact. SOmetimes I'll tune in code practice
just to keep some resemblance of skill. (hey, no one needs more than
5wpm anymore to keep legal, you know. You could do that-Couldn't you?

IF passion for emergency communication for the benefit of
> public safety is the motivation, then why not support and realize that no
> one mode should be advocated--*all* modes available should be advocated?

Where ya been? Not reading my posts on this newsgroup, that's for sure.

> The argument that CW "will get through" when no other mode will just doesn't
> fly any more.

And it nerver did! Can't you read? It CAN get through far better than voice modes in austere conditions, which often accompany times where those emergency communications are needed. Did you ever listen to HF when there is a hurricane around? I'd bet not. So you really don't have a clue what you're talking about, you're just tossing out verbiage.

Who do we know that is doing any of that??? I thought we all concluded
here long ago that the code test was moot, gone, all that remains is for
the treaty to go away. The FCC said as much.
There is a difference in stating why there *should* be a code test,
and realizing that there will not be one. I think you seriously
misunderstand my
effort.

John, John, John.... PLEASE. Your experiement proved only that you have no idea what Jim was talking about. Do it again and try to get every work written down ON PAPER with 100% accuracy. But this time you must go down on the AM band and look for a weak, fading station that is coming and going, such that you are not able to hear some words, thus you must insist that the talker spell each word phonetically and repeat each and every word that you miss or are even mildly unsure about. THAT is more in line with traffic handling. And that is what Jim was talking about. You wure won't get that at 120 WPM.

FCC has already dropped most code testing. All that's left is a single test, kept alive by S25.5 and nothing else.

"Promoting" CW needs to take many forms. Demos are one way - show 'em, don't tell 'em.

>2. I want to eliminate the morse code test for an amateur license.

You also wrote (Jan 19, 2000):

3. "I'm going for Amateur Extra "out of the box." Maybe I'll make it, maybe not. The personal point is irrelevant. What 99-412 really means is that there is no longer any time-in-grade "seniority" nor any morsemanship that indicates "superiority" of those bragextras. That applies to EVERYONE who wants to try...without all the artificialities of adhering to standards and practices of the 1930s held in place by old men trying to relive their youth by bravado and braggadoccio."

4. "I'm another "old man," a retired professional in radio-electronics engineering. Some of those tenured old men of US ham radio don't seem to want anyone with practical, professional and academic skill in radio and electronics technology. They seem to fear those who have industry-proven capabilities because that doesn't fit into their standards...or because they are insecure in not really knowing what goes on behind the front-panel of their factory-built equipment. They have difficulty in trying to put down those who know practical theory so they try to make fun of them instead...using their license paper as a "diploma" and their HF CW tenure as some kind of "PhD" or "professorship" of radio. Radio theory is somehow

imbued by spending hours working rare DX at high
rates, therefore some of those old men are "expert."
:-)"
>
>They are not "anded," interlocked or otherwise connected.

Your many posts on the subject show otherwise.
>
>Those who attempt countering what I've said about (2) by
>connecting it with (1) are doing so deliberately and maliciously.

Even if what they say is true?

I think I know what really bugs you about the code test, Len. The following discussion is about US regulations only.

There are many people in modern society with enough knowledge of radio and electronics to pass the tests for a US ham license. Many more can easily pick up the required familiarity by reviewing the Q&A pools, which are widely available and free for the download. Any of these folks who wants a ham license can pass the writtens with almost no preparation.

Morse code is another matter. Only a tiny percentage of would-be hams already know the code well enough to pass the test. And unlike the written test, most people cannot learn enough Morse to pass the test by reading a book, watching a video or surfing some websites. Learning Morse usually takes a bit of dedicated study of the subject matter.

End result is that the Morse test functions as a "Great Equalizer" in which almost all prospective HF/MF hams have to queue up to the same starting line, learning the characters, building up speed, etc. Today there are more and better learning tools than ever, making the process easier and quicker, but the basic test remains.

From your many many many posts on the subject, Len, it's clear that you don't like the Great Equalizer. It's obvious that you don't want to have to start at the beginning of something like learning Morse. Anyone can see that you don't want to be lumped in with the great unwashed masses of hamdom, particularly those like me who have both technical knowledge and Morse skill. Instead, it seems you want instant recognition and status, based not on amateur radio accomplishments but on "other radio" accomplishments. And the code test stands in the way of all that.

If the shoe fits....

>the commissioners.

Precisely. The BOD is in a tough corner - on the one hand, support of S25.5
among other amateur societies is all but gone, as evidenced by last years
Region 3 IARU meeting. Many other countries have reduced their code test
requirements to 5 wpm. On the other hand, feedback, surveys and the comments to
the FCC show that a majority of US hams, ARRL members and others interested in
the subject support code testing.

So the BOD walks the narrow line shown in their policy. The support for
continued testing without S25.5 is just a bone tossed to the majority. When the
FCC drops 5 wpm, the BOD can say "We opposed that".

Yeah, but you better be able to demonstrate that there was absolutely no other option for communications and that it is pretty much a life or death type of emergency. Part 97.430 (or is it 97.340, something like that anyhow) allows for the use of any type of radio as long as specific conditions are met. Any other common, normal comms would otherwise be illegal.

Bill, Then don't use the radio, they have that right because they tell you this going in you know when you buy the radio what the rules are right, at least thats what everyone in here says. They all say they know the rules well the rules clearly state that the authority has the right to inspect your station. Why is this a problem, most law abiding citizens don't have a problem with it if you are operating legal Why would a visit from the FCC be mentioned in the same breath as Jews and nazi and burning people. No one is telling you to use a radio, if you don't like the rules don't use the service. Do you take your car in for its annual motor vehicle inspection (for those states that do) ? Don't wanna get pulled over by the cops on the highway, don't drive. Its your choice. You don't have to like all the rules you just have to abide by them.

In spite of your insults and snippets below, I did end up reading most of what you posted, Dick. No, I choose not to operate CW and have never had an interest in CW beyond what I had to know to get my amateur radio license.

However, being EC for Hunt County, living and breathing emergency communication preparations every spare moment that I have, a burning desire to see more than a handful of amateurs involved for the benefit of their communities, and providing leadership and essential organizing skills to the county is everything I give back to amateur radio--as much and more than I can personally afford out of my spare time. I have two TNC's, many, many talkies that are there for the asking on any public service event, a 70' tower up in the backyard with nothing on top of it, but lots off to the sides of it, have a 40' pushup pole for my homebuilt 2M quad beam, served in MARS for two years, one year as Net Control (NNN0YCD is the call), have just spent from March to next weekend and about $1500 (that I have made by working many overtime hours at my job) putting together an all day planning session for Hunt County ARES to try and get loads more people involved, have taken the Levels I, II, and III ARRL Emergency Communications courses, have mentored one Level I class, one Level II class (ongoing), and have spent what time I could helping develop the Level III class with others working for the ARRL. I have helped elderly hams get antennas back into working order, disabled hams establish stations by giving away radios, getting crews together that will help erect antennas, etc. I will be donating a full working computer station, a radio, and a antenna if it is needed to our newly established EOC, and that is just the tip of the iceberg for my ham radio stuff--just this year. I have a wonderful husband whose patience goes beyond standard to see his wife out running around until all hours of the night helping other hams become excited, better hams and people by encouraging them to think outside the box and get their elbows bent doing some community work. I will do all I feel I can do for the communities I live in, through ham radio, and hopefully will grow the hobby in the process.

But, because I don't like to operate CW; and because I don't think it should be part of the licensing structure, you, and people like you such as almighty and powerful Larry think that people like me are not real hams. We're more hams than many on this newsgroup; and we don't ask a damned thing back from this hobby, either. We don't ask for your respect, your idolatry, your anything. We just keep on trying whatever we can to help our communities realize that ham radio is advantageous, fun, and could save lives in the while.

I am a real ham, Dick, with or without CW. Self-centered, huh? I think you need to take a good, long, hard look at what is happening in this hobby all across the United States. In spite of people like you, there are people

like me who are out there working hard to get this hobby woke up.

Jim is assuming that it is not conversational English but instead
requires many phonetic spellings. For instance, he is assuming that
my name would be Charlie Echo Charlie India Lima which takes
approximately the same time as -.-. . -.-. .. .-.. in Morse.
Morse is about the same throughput as spelling out English words
using letters and/or phonetics. It's mostly a strawman argument.

So back to my original answer: They perform a geometrical transform.
The Smith Chart is an example of a geometrical transform where infinity
is transformed into existence onto a piece of paper. A sphere can easily
be transformed into a flat surface and boundary conditions can ensure
five sides to that flat surface.

It's usefulness is certainly limited by the fact that 99.9% of the
human race doesn't understand it. Wonder why the military has abandoned
CW for day-to-day use and how they manage to get their digitized voice/data
modes through in a perfectly acceptable manner?

> You *assume* I love it (CW), wrongly as it turns out.

You can say that again. Anyone who loved CW would not state that
it has so little merit that it needs to be forced on all HF hams
by a federal affirmative action program.

I heard that our torpedos' engines had a high failure rate, but I suppose we had more than enough to make up for that. probably the biggest thing in our favor was that we cracked their secret codes; something they never believed we'd ever be able to do. Of course we had to ration our knowledge gained, picking what battles were critical to win, and losing the ones that didn't matter. Else they'd
realize that their code was cracked.

You have stated that CW/Morse doesn't have enough merits to exist
without a federal affirmative action program. Ed and I have said
that it does. So which of us is trying to turn new hams off to
CW and which of us is trying to turn new hams on to CW? Your
vinegar is just not working, Dick. Try some honey.

> Most of they are already here, it turns out.

So there were not hordes of CBers and freebanders after restructuring
because they are already here???? Then what the hell was all your
whining and moaning about? If the sky fell in 1985, why are you
still shouting that the sky is falling and/or is going to fall?

If ham radio is screwed up, Dick, it was screwed up long before you
ever thought about taking a ham exam. Ham radio, like any other human
endeavor, is not perfect and never has been, not even with you in it.

>No question about it, the FCC claims the right to bypass the 4th
>Amendment,

An FCC inspection is not an "unreasonable search or seizure" as prohibited by the Fourth Amendment. Read the part of the Public Notice about what agents can and cannot inspect. Operating the radio or mere holding a license (if required) triggers the authority to inspect provided for in Section 303(n) of the Comm Act.

In real life, the FCC agent will identify him/herself (yes, there ARE lady agents) and make a request for inspection. The FCC agent does not have authority to make an entry by force, therefore there's no Fourth Amendment violation.

Refusal to allow an inspection - one of the most serious actions dissing the FCC's authority - result in anything from issuance of a Notice of Violation enmeshing the operator in the wheels of the bureaucracy, to a Monetary Forfeiture enmeshing the operator's wallet into that same bureaucracy, to a visit by the US Marshal with a court order (warrant) which grants the authority for entry "with force deemed appropriate" to make a seizure and/or arrest.

The FCC never loses...

Not so....if there's proof that radio signals came from the
premises, and the operator claims (or even shows) "mo equipment
here", the operator is cited for failure to permit a complete
inspection.

"The dog ate it" defense doesn;t hold up.

Gosh and gee whilickers, JM, I never did state a date of
when that would be done, did I?

Tsk, tsk, I sense petulant whining from you on the
insistence to Do It Now!!! :-)

>>Those who attempt countering what I've said about (2) by
>>connecting it with (1) are doing so deliberately and maliciously.
>
>Even if what they say is true?

They aren't "true," JM. You WANT it to be true, I'm sure,
because you have strong feelings about CW and the
near-absolute traditions that go with it. It must bug the
hell out of you that anyone Dares to speak the least
thing against your opinions. :-)

>I think I know what really bugs you about the code test, Len.

Is it true that passing a ham test bestows Telepathic abilities?

If so, I might run out and get one on Monday. Mind-reading sounds like a cool tool and, if it comes free with the test, even better!

>The following discussion is about US regulations only.

Really?!? :-)

>There are many people in modern society with enough knowledge of radio and
>electronics to pass the tests for a US ham license.

Really? Isn't amateur radio different/superior to other radio?

>Many more can easily pick
>up the required familiarity by reviewing the Q&A pools, which are widely
>available and free for the download. Any of these folks who wants a ham
>license can pass the writtens with almost no preparation.

No preparation? How about bathing and dressing in clean clothes?

Oops, I got facetions there. My apologies.

>Morse code is another matter. Only a tiny percentage of would-be hams already
>know the code well enough to pass the test. And unlike the written test, most
>people cannot learn enough Morse to pass the test by reading a book, watching
>a video or surfing some websites. Learning Morse usually takes a bit of
>dedicated study of the subject matter.

But, can would-be hams prepare for the writtens by reading a book, watching a video or surfing some websites? Please specify the book, the video, the URL so as to aid the woefully ignorant.

>End result is that the Morse test functions as a "Great Equalizer" in which
>almost all prospective HF/MF hams have to queue up to the same starting line,
>learning the characters, building up speed, etc. Today there are more and
>better learning tools than ever, making the process easier and quicker, but
>the basic test remains.

So...Part 97 explains the "equalizer" part in detail to make it necessary to keep the code test?

The code test MUST remain because (other than some ITU-R ramblings) it "separates the men from the boys?" (difficult and gender disadvanted for females) It shows "dedication and resolve?" (does Part 97 or even Title 47 demand "dedication and resolve?") Is morse ability some secret, sacred necessity of MF-HF licensing that is unstated in any US laws?

Or isn't more like "all the MF-HF privilege radio amateurs had to take a morse test and therefore every would-be amateur has to do it too?"

>From your many many many posts on the subject, Len, it's clear that you don't
>like the Great Equalizer. It's obvious that you don't want to have to start
>at the beginning of something like learning Morse.

Incorrect. NOBODY should "have to start at the beginning of
morse testing" because there is no logical necessity of making
it part of modern-day amateur radio testing.

The FCC determines what the FCC needs in US civil radio
license testing, not the "amateur radio community" or those
that prefer OOK CW mode over all others. The FCC has
said (in 1990 and 1999) that the morse code test does not
serve any FCC purpose in determining whether or not an
amateur license examee should be granted a license.

>Anyone can see that you don't
>want to be lumped in with the great unwashed masses of hamdom, particularly
>those like me who have both technical knowledge and Morse skill.

You shouldn't put yourself down like that, JM. I'm sure you
wash regularly.

>Instead, it
>seems you want instant recognition and status, based not on amateur radio
>accomplishments but on "other radio" accomplishments. And the code test
>stands in the way of all that.

Tsk, tsk, you have it all wrong again, JM.

A written FCC examination is not "instant." Not for any radio
operator license, commercial or amateur.

One cannot have "amateur radio accomplishments" until an
amateur radio license is granted. Before then, it is
"impossible" to have any "acoomplishments" without
being a legal, licensed, certificated and credentialled radio
amateur. Haven't you seen what others have been
shouting on that subject? :-)

A code test is not necessary for a Technician class
license.

Try working that ploy again in your next tirade... :-)

>If the shoe fits....

Are you "built to last?!?" * :-)

LHA

* For the humor-impaired, a "last" is a form used by
shoemakers to fabricate a shoe to an individual's foot.
Many will be outraged by the use of puns in here, but,
remember: "When puns are outlawed, only outlaws
will have puns."

>>
>>>You said you were going to do it, but you haven't. Actions speak louder
>>> than words.

I've never posted a date.

Sounds like whiny irritation at work that the PCTAs attribute
to the NCTAs: "Whaa, whaa, I want it NOW!" :-)

>>Has James Miccolis ALWAYS said what he is going to
>>do and ALWAYS accomplished that?
>
>In other words, you admit that you said you were going to do it and haven't.
>To distract attention from that point, you attack me, using my full name.

"Attack?!?" My, my, you are a very, very sensitive soul,
aren't you?

Let's see...James (NMI?) Miccolis makes a big thing out of
past postings, so much so that it becomes some sort of
battle royal in words ("go to Google and pull out the quote
that 'proves' someone said something!"). You have a penchant
for that pedantry of living in the past, "forcing" others to go
over old ground again and again until they tire of your past-
posting tirades. When others quit you can feel vindicated
that you have "proved" something...but all you've done is to
irritate others enough so that they quit posting replies.

You can make an avocational career out of "going to
Google" and arguing endlessly about PAST postings,
their wording, analyzing things phrase by phrase by
word by word. Some folks like that. James (NMI?)
Miccolis seems to. :-)

>> Get real, no human is that "perfect."
>>
>How do you know?

You are getting petulant there. Is James (NMI?) Miccolis
perfect? If so, please present proof from disinterested
sources.

>We're talking about something you said you were going to do,
>here, in public, on rrap. Hasn't happened yet.

Yes, I said that. I did not specify a date. I'll still hold to that
original statement but I'm not going to state any date now or
in the future. Live with that...but I don't think you can.

>>Now...how about I challenge you?
>
>Why go through the motions?

Why not? You Demand this of others and now try to get
out of it when the same thing is applied to yourself.

Tsk, tsk. :-)

>There you go again, Len - focusing on the tests YOU took. Why do you want to
>live in the past?

What I tried to point out is the same as what you Demanded
of others..."take the same tests I took." :-)

>This is an amateur radio newsgroup. The discussion is about tests for an
>amateur radio license.

Is it?!? :-) I thought it was about Old history of ham radio,
presidential politics, domestic versus foreign autos, Old
newsgroup postings, and, especially, about how superior
OOK CW is to every other mode.

>>You can't do it, Jimmy, can't pass them.
>
>The ones that are not available cannot be passed by anyone.

Correct...but you seem to want to dwell on such things. :-)

>>Do you really want to live in the past?
>
>You seem to - focusing on the tests YOU took so long ago.

I was focussing on "tests" done recently and have done so
for at least two years...those "tests" at work where the
"passing grade" was receiving a regular paycheck. Those
never resulted in a personal callsign but they were "tests"
nonetheless.

James (NMI?) Miccolis isists on my immediate testing for
the amateur radio service. Is that to "lend credence" to
all postings? :-) Will opinions remain the same after an
amateur radio test passing or is there some magical,
transcendental experience which opens up radio. Such a
revelation might be interesting to experience! :-)

>In other words, you want me to shut up because I point out the facts too
>often.

Oh, my, no! Jimmy, you take too many myths as "facts"
and make your personal opinions into "facts." Many of the
things you write are unbelievable as "facts" but you are
free to write them as long as you maintain an ISP. :-)

You make so many errors of "facts" (which are not real
facts) that it takes too much time to spend in corrections.
Feel absolutely free to make as many errors as you wish.

>>Now that you've lived happily in the past for a while, why
>>not come out to the present and live for the future?
>
>Ah, the old ad hominem attack when shown the truth. Shoot the messenger.
>Typical.

Well, I have to apologize for accusing you of living in the past.
You do that, but civility requires my apologizing for saying so. :-)

Suggestion: Post from the Google site. That way you would
have immediate access to all newsgroup messages instead of
just the 30 day limit at AOL. Then you can argue exact
previous postings' sentences, phrases, words, etc., with
impunity and righteousness against all who write against
your opinions and "facts."

Oh, and keep watching the amateur radio license databases.
There's no telling who may show up there in the future... :-)

Exactly what good is Morse code skill without a transmitter?
What is wrong with freedom of choice in a hobby in a free country?

> IMO the FCC would be well within its charter to require licensed hams
> to keep station equipment for use as long as they hold an active
> license.

Oh Boy, what ham radio needs is more governmental requirements and
regulations. A ham couldn't legally sell his rig in order to feed
his family during hard times. What a way to encourage newcomers - NOT!

The FCC has that requirement for private land-mobile radio licensees
who have one year to build and load/use the licensed facilities.

Many foreign governments have that rule for amateurs as well under
the theory that if you don't have any equipment you don't need a
license.

Dream on, Dick. We have officers of the law in Florida planting guns
on citizens after they shot them and officers of the law in California
murdering citizens to obtain their possessions under the RICO laws.
And that's obviously just the tip of the iceberg. The Police State
is already here. You just haven't realized it yet. Anytime they choose
to take you down, they can do it with relative impunity with very little
chance of getting caught. Happy fascism.

It was the magnetic detonators on the torpedo heads. The motors ran
great, the torps didn't explode in a dead on hit or exploded prematurely

Because although we loathe what they might say, we defend their
right to say it. The first ammendment essentially agrees with
the old saying, "Sticks and stones may break my bones but words
can never hurt me." And freedom is always better than fascism.

>Message-id: <20010908202211.17422.00003784@nso-bj.aol.com>

(Multiple "He Siad-She-Said" Quotes Snipped)

>I've never posted a date.

No, you haven't. But you said you'd do it, and you haven't. The time frame alluded to ("...out of the box") would have caused the reasonably well read participant to expect that you would do it as it was made available.

You are never, as always, without an excuse.

>You have a penchant
>for that pedantry of living in the past, "forcing" others to go
>over old ground again and again until they tire of your past-
>posting tirades.

Again, the King of The 1950's HF KW's scolds another for dong that which HE is so famous. (Or was that INfamous?)

>You can make an avocational career out of "going to
>Google" and arguing endlessly about PAST postings,
>their wording, analyzing things phrase by phrase by
>word by word. Some folks like that. James (NMI?)
>Miccolis seems to.

Mr. Miccolis "seems" to...You DO...! ! !

>Yes, I said that. I did not specify a date. I'll still hold to that
>original statement but I'm not going to state any date now or
>in the future. Live with that...but I don't think you can

Yes, Jim, why should we expect this lying sack of spurious emissions to do anything he said he would?

He's already been caught with his virtual britches down claiming to have NOT said something only to be spoon fed his own words....He's not about to live up to any of it now just to be contrary.

Guess he can run out and get that Yaesu FT-1000 now and listen to us on the air.

Maybe if we started a "Bash Lennie" net on 40 fone he'd finally gt a licnese so he could get in there and "defend" himself. Of course he'd only "answer" in here, but then the REST of Amateur Radio (those who are LICENSED

and ON the air) would only hear OUR side of it...

>James (NMI?) Miccolis isists on my immediate testing for
>the amateur radio service. Is that to "lend credence" to
>all postings?

How about to ANY posting, Lennie? So far, anything that exceeds electronics theory is pretty much just speculation and opinion on your part.

You are pretty skoshi on facts.

>Will opinions remain the same after an
>amateur radio test passing or is there some magical,
>transcendental experience which opens up radio.

In as much as you MIGHT then have a basis from which to formulate an INFORMED opinion (assuming, of course, you actually PARTICIPATE in Amateur Radio) some of yours might change.

And if you DID get a license, 90% of the "confrontational" exchanges that occur herein would no longer be founded.

>>In other words, you want me to shut up because I point out the facts too
>>often.

>Oh, my, no! Jimmy, you take too many myths as "facts"
>and make your personal opinions into "facts."

FACT: Leonard H. Anderson asserted that he never stated that he would obtain an Amateur Radio license.

FACT: N2EY proved he was lying.

FACT: Lennie is still stinging from it.

OH..That HAD to hurt!

>You make so many errors of "facts" (which are not real
>facts) that it takes too much time to spend in corrections.
>Feel absolutely free to make as many errors as you wish.

So far his ONLY error is assuming you are a man of your word.

We know better.

>Suggestion: Post from the Google site. That way you would
>have immediate access to all newsgroup messages instead of
>just the 30 day limit at AOL.

Hmmm...He did that over 24 hours ago...Posted your January 2000 rant in which you assert that you will obtain an Amateur Radio license. (that HAS been more than 30 days, hasn't it?) You still haven't obtained said license.

Assuming a VE test is available somewhere within 100 miles at least once a weekend, that's over 80 chances missed. Not a very enviable record for a "professional"

>Then you can argue exact
>previous postings' sentences, phrases, words, etc., with
>impunity and righteousness against all who write against
>your opinions and "facts."

I read the post from Google. he got it right. 100%. Your "response"
is to cower and lie.

Typical.

>Oh, and keep watching the amateur radio license databases.
>There's no telling who may show up there in the future.

It won't be YOU, but we'll look anyway.

>>3. "I'm going for Amateur Extra "out of the box." Maybe I'll
>>make it, maybe not. The personal point is irrelevant.
>
>Gosh and gee whilickers, JM, I never did state a date of
>when that would be done, did I?

Again...an educated person would have taken your "out of the box" comment to mean within a relatively short period of time after the availability of the test.

That was 1 year and four months ago. (that the test was available)

Not a very enviable record.

>Mind-reading
>sounds like a cool tool and, if it comes free with the test,
>even better!

I'll ask the Wizard to give you one along with the strawman. (A mind, that is...)

> The FCC has
>said (in 1990 and 1999) that the morse code test does not
>serve any FCC purpose in determining whether or not an
>amateur license examee should be granted a license.

And they hae also said thier hands are tied by the treaty (that YOU insist the US is not obligated to recognize) in that matter.

Contrary to your "lodge hall" and "secret society" rants, they have already stated that it's going away.

Only YOU continue to use it as a launching pad for more rants.

>One cannot have "amateur radio accomplishments" until an
>amateur radio license is granted. Before then, it is
>"impossible" to have any "acoomplishments" without
>being a legal, licensed, certificated and credentialled radio
>amateur.

YOU said it, Lennie! You can't have any "acoomplishments" without the license.

From your keyboard to our eyes!

>A code test is not necessary for a Technician class
>license.

Then why don't you have one?

>Try working that ploy again in your next tirade.

Back at ya, Big Boy.

You've got to be kidding. What about the guys in Florida upon whom
the police planted a gun after they shot them in cold blood? How
about the California guy who was murdered so the sheriff's department
could seize his possessions under the RICO laws? You don't have to
do the deed. All you have to do is be in the wrong place at the
wrong time.

Sorry Phil, your as wrong as two left feet on this one. To claim that "the FCC does not have the authority to force (I assume you mean physically?) its way in without a warrant" and then gleefully proclaim:

"Refusal to allow an inspection - one of the most serious actions dissing the FCC's authority - result in anything from issuance of a Notice of Violation enmeshing the operator in the wheels of the bureaucracy, to a Monetary Forfeiture enmeshing the operator's wallet into that same bureaucracy, to a visit by the US Marshal with a court order (warrant) which grants the authority for entry "with force deemed appropriate" to make a seizure and/or arrest."

This is no more "righteous" than coercing a sexual favor from a subordinate by threatening their job and then claiming the encounter was consentual, please. Phil, I respect your views, but you're dancing like a lawyer right now. It'd be nice if the FCC's rules and regs were legislated like any other laws...especially in light of the huge disproportionate fines levied. The FCC should be in the enforcement business, not the legislation business. Take care and 73.

>gun on them.

Cecil:

Well, I certainly don't endorse that sort of behavior on the part of police officers. I was referring to a person who was actually witnessed to be carrying a firearm while in the attempt or actual process of committing a criminal act. Should this person flee from a police officer, I don't believe it would be a good idea to allow him to do so, if the officer can, with reasonable safety to the general public, use his own firearm to prevent the suspect's escape. Bad cops that plant guns on unarmed suspects aren't in agreement with me on anything at all. If I were a cop, and didn't actually see a gun in a crime suspect's hand, I would not shoot him under any circumstances. Would you?

>to be involved in a Big Lie. It will never fly.

Cecil:

The FCC can say that reducing code testing requirements is not
dumbing down the ARS all it wants. That does not mean that what
they say is true, or that I believe it. The FCC, like any other bureaucracy,
will state whatever it needs to state in order to support it's own
objectives. Right now, one of their objectives is to rid itself of the
regulatory burden of a radio service which has no substantial
significance to the U.S. economy, in order to focus their limited
resources on those which do. The FCC thinks they "own" the ARS,
so they can say anything about it that they want to. However, in
actual fact, the ARS "belongs" to radio amateurs -- and it is what
radio amateurs make of it. That is the real-world, practical reality.

The FCC regulations only define the legal limitations of what radio
amateurs can do with the spectrum allocated to them. Defining the
true nature of the service is something that exists on a higher plane,
and must be the result of the total experience of radio amateurs.
Therefore, the FCC can't really say what "dumbing down" our service
is or is not, since they don't control the perceptions of radio
amateurs -- just how far they can spin their VFO knobs and power
output controls. The fact that they wrote this into the Restructuring
R&O doesn't mean that the ham community has to accept it as
the unalloyed truth.

In article <WCxm7.59299$tb.5085285@news02.optonline.net>,
StopTheHate1@netzero.net writes:

>I do not understand why the United States
>permits public radio hosts to have
>web sites like http://www.halturnershow.com .

I think Hal Turner is nothing more than typical knuckle-dragging,
slope-headed, drooling, ignorant white trash. However, in the
United States, we have this wonderful thing called Freedom of
Speech -- which allows hate mongers like Turner to spew their
venom on-the-air, and also allows good people like ourselves
to call him what he truly is!

Snipped: A revolting, and accurate, description of Turner's
radio trash.

>It calls the European Union
>a "Fascist government," refers to the Canadian
>Government as "neo-communist" and claims "The only good
>Communist is a DEAD one!"

Above are the few items in which I believe Turner may have a point;
however, that point is not well taken in view of the remainder of his
racist attacks.

>Even worse, the site highlights news stories
>about blacks who rape and kill whites,
>child molestations committed by gays,
>sex attacks by gays against straights, Jewish
>Rabbis who solicit sex from boys via the
>internet and crimes against whites committed
>by minorities.

If these stories are taken from the news, and are factual, why
would you object to Mr. Turner's use of them on his web site?
The liberal media, with it's socialist agenda, does not report
such stories, therefore perpetrating a lie through omission.

>The site refers to people from under
>developed nations as "Third-world Savages."
>
>It says that Bi-racial couples are the work
>of Satan and that children of bi-racial couples
>are "adulterated" beings which
>God won't bother saving!

Yes, he does say these things, and these things are totally wrong. Therefore, it is the responsibility of well-meaning people such as ourselves to point out these fallacies, and object to them in the proper manner. Suggesting that Mr. Turner have his First Amendment rights cancelled is not the proper way to proceed.

>Please help me shut down this virulent hate site.

I would do that by writing to any advertisers who sponsor his radio show and/or web site, and state that they will lose my business if they continue to provide financial support to Mr. Turner's hate mongering.

>This man's radio show broadcasts to the entire
>world. Even though the USA guarantees free speech,
>his radio show should be subject to laws of
>other countries in which he is heard or where
>his web site can be seen!

If the broadcast originates in the United States, then it is subject to the laws of the United States with regard to content. And since the First Amendment is the law of *our* land, you, as a non-American, must oppose the likes of Hal Turner the same way other Americans would -- by stating your displeasure to the sponsors of the broadcast. Hit the man where he lives -- in his pocketbook. That is the American way. We don't go around abrogating people's civil rights just because we don't like what other people think, do, or say. THAT is something that is done in the "Third World" countries you defend so ardently.

>Sensitive, tolerant people of the world UNITE. Stop The
>Hal Turner Radio Show!

What is it we're supposed to be "sensitive" and "tolerant" of? Totalitarian control of our media? I think not. If you dislike the Hal Turner Show (and I don't blame you if you do), then do what the United States government does when other countries violate the civil rights of their citizens -- impose economic sanctions on him! State your objections to his sponsors! I guarantee you -- you won't get him off the air any other way!

>Why do you insist on everyone being equipped for CW/Morse if
>you never expect it to be the best choice for emergencies?

Cecil:

My idea of the "best choice" mode for emergencies would be a high-
speed digital mode, capable of moving a great deal of traffic in minimum
time with maximum accuracy. Therefore, if the station receiving my
traffic were compatible, I would choose PACTOR, AMTOR, PSK-31,
and RTTY -- in that order. Were these modes not available at the
other end, I'd use HF phone, since it is the most ubiquitous mode.
Then, if conditions degraded to such a level that phone operation
were no longer possible or practical, I'd still have CW to fall back
on, since I happen to know how to use it. Therefore, as you can
see, my individual capabilities as an emergency communicator
have a lot of "depth." When I get down to the point where I no longer
have the fuel for a generator to run my HF station *and* a computer,
I can still communicate using low-power CW for quite a long
while after a ham without CW ability would have had to go QRT.
Without the code testing requirements in place at the time I
ascended "through the ranks" of the amateur license structure,
I would have been just another QRT phone or computer-
dependent ham.

Sooo -- who do you want around "…When All Else Fails?" Me, or
a Nickle Extra who never made an on-the-air CW contact?

>going to allow him to do that. You cannot keep him from doing that with
>just a keyboard. So I repeat. How are you going to keep him from doing
>that? Shoot him?

Cecil:

No matter how you convolute what I've said, I have absolutely no
intention of doing any sort of physical violence to anyone, anywhere.
You, however, seem to be obsessed with the notion of shooting
people. Perhaps the authorities in your area should be notified, and
any and all firearms you own should be confiscated until you can
prove that you do not intend to shoot anyone. If you own a gun,
Cecil, how do you intend to prove you don't intend to shoot anyone?
After all, since you are egging me on to shoot someone, I can only
guess that you want to see someone get shot -- therefore, since I
won't shoot anyone, you are likely to do it yourself! You are a
dangerous person, who should not possess firearms. Your apparent
obsession with shooting people is all the justification some liberal
judge would need to cancel your Second Amendment rights. So,
are you going to keep going on about shooting people, or what?

>
> And it makes PACTOR II superior to CW.

But of course the problem is that far, far more CW rigs available,
simple as they can be constructed, and since they are universially
present in HF rigs, than PACTOR. The questionis not "should it be that
way" but it is the reality. And is almost certain to remain unchanged
for the forseeable future. Most hams want to use voice or CW. Some much
smaller percentage keep digital rigs in service at their home stations,
and even they rarely use them mobile or portable when camping, etc. It
just makes sense to try to keep CW available as a mode of common use for
emergencies.

It's a euphemism, Cecil. Brasspounders toggle their keyers.

When I quote someone, I put quotation marks around the quote.

> What you inferred was not what I implied. Will you never learn?

Your "implication" said that the Civil War was not about slavery. There's
not a lot of wiggle room there, Cecil. Do you understand the concept of a
logical "not"?

"Actually need"? Is that like "from each according to ability, to
each according to need"? Who gets to decide how much of a person's
earnings is actually needed? Wouldn't the person who earned it be
in a better position to figure that out?

>See:
>http://www.cbpp.org/5-26-01tax2.htm
>http://www.ctj.org/html/gwblater.htm

You might want to read through these entirely.

Your assertion isn't true at all for this year's tax cut, which
is what I thought the topic of conversation was. This year's cut
takes 1% off each of the tax rates, drops the rate for those with
less than $12,000 taxable from 29% to 10% and increases the child
credit. All of this means, the less you earn the bigger your
percentage cut. More than this, capital gains and AMT are unchanged.
I'll bet I pay more taxes than you do, and I'll also bet you are
getting a bigger refund check than I am, because I'm not getting one.
Zilch. Nada. Next year I'll get a small cut, but I'll bet
it is still a lot less than yours. Somehow your quality analyses
aren't showing up in my pocket.

Your assertion also isn't true for any living person. What neither
of those "quality analyses" points out explicitly is that the only
part of this tax cut which actually provides a disproportionate
benefit to people who have more (everything else is the other way
around) are the cuts to the estate tax. It goes from 55% (!) now
down to 45% in 2007, then goes away in 2010, then goes back up to
55% in 2011. This has a disproportionate effect because the exemption

is large enough that a lot of people don't die with enough to be taxed, which the government makes up for by taking an outrageous amount from those who do have enough. The trouble is, the only way a wealthy American can take advantage of this incredibly valuable tax cut benefit is if he dies. What kind of benefit is that? If you are wealthy either you live until 2011, in which case you get a smaller tax cut and less additional cash in your pocket than everyone else, or you die before then, in which case you're dead. Boy, are those rich guys ever lucky.

Since you are basing your "wealthy Americans get more" assertion solely on the changes to the estate tax, let's look at that tax for a bit. The estate tax now is 55% of whatever you have when you die which exceeds your lifetime exemption. Except, if you leave the money to someone something like 37.5 years younger than you, or probably someone out of the country, then you also pay the Generation Skipping Tax, which is an additional 55% of the 45% that was left after the first 55%, for a total of 80% to the government and 20% to anyone else. And note that the money being taxed is money the guy who died already paid income tax on, so in the worst case the government already got 40% of the actual earnings, plus 80% of the 60% left, which gives the government 88% of the original earnings, with 12% going to someone the person who died wanted to leave it to. In fact you don't even have to die, if you give it away before you die you pay the same tax, they just call it "Gift Tax" instead. And you pay the same tax no matter how poor the individuals you want to give the money to might be.

So the estate tax doesn't take money from some rich guy, he's dead already and has no use for it. What it does instead is to take a substantial fraction of the money, if not nearly all of it, away from whomever it is that the person whose wealth it was wanted to have it, substituting the government's choice of who to give it to instead, and it does this regardless of how much the people for whom the money was intended "actually need" it or any other consideration. As if this even matters, it's money someone already paid taxes on and was frugal enough to not spend during his lifetime, so what right does the government have to substitute its own judgement of who is needy over that of the person whose earnings this was?

The estate tax is unfair. I'm no lover of Republicans, but if lowering the estate tax for a while is the worst thing you can find to complain about them I might change my mind.

>> As long as the money gets spent or saved, it doesn't matter to the

>
>With all that "punishment" going on, I take it, then, that you'd
>rather be poor than rich in this country? Certainly sounds like a

>better deal to me.

You are the one asserting that this is a tax cut for the rich because of how much they'll save if they die in 2010. I'd rather be poor then I would to take advantage of that tax cut, thanks.

No, YOU said that. I said that propective hams will not learn it
without it being a test requirement. After all, first and formost they
want to get the license and talk, so they do what is required to get the
license. If learning the Morse code isn't included they won't do it.
Most will never do it, simply becuse they will never take the time to do
so, and will never be exposed to CW to the point where they find out
what it really is.
Why this is so obscure a concept is so obscure a concept to you is
really strange, or would be if you were openminded. Clearly you are not.

No Cecil, the Internet fell in the mid 90's for most of the USA. That
was enough to keep a large number of people out of ham radio.
Otherwise it started falling in 85 and just took several years to get
it done.

>had
>more than enough to make up for that.

The Mark 14 submarine torpedo had a large number of flaws at the beginning of WW2, but engine trouble wasn't one of them. The Mark 14 was a "steam" torpedo that burned alcohol and compressed air in a turbine.

The best-known problems were the following:

- The magnetic exploder, which was supposed to detect the magnetic field of a ship and detonate the warhead as the torpedo passed underneath the enemy ship's keel, was prone to premature detonation or no detonation at all. It was a marvelous and ingenious invention but impractical in actual combat.

- The contact exploder, which was supposed to detonate the warhead if a torpedo actually hit the side of an enemy ship, had a high failure rate due to poor design. When a torpedo going more than 46 knots plows into the side of an armored ship, there is tremendous deceleration, which results in high G forces on all parts of the torpedo. In many cases the contact exploder mechanism parts would be bent or jammed before they could do their job.

- The depth settings were unreliable, and Mark 14s would tend to run much deeper than set, In addition, they would not keep a constant depth but would vary depth like a sine wave.

- Some torpedoes would make circular runs and even sink the sub that fired them.

The later Mark 18 electric torpedoes suffered from all of the above flaws, and also had the disadvantage of being slower and having less range. They were temperature sensitive, being slower in cold water. However, Mark 18s were quieter and left almost no wake, compared to Mark 18s.

WW2 USN "fleet submarines" typically carried up to 24 torpedoes (ten in the tubes and the rest as reloads) but early in the war production could not keep up with demand and many subs patrolled with less than a full load.

The magnetic exploder was a complete failure and was eventually deactivated. The contact exploder was improved to the point of acceptable reliability. The depth problem was partially fixed and the sub captains learned to allow for it.

Why were these problems not detected long before Pearl Harbor? One reason was inertia, another was secrecy and the third was cost.

> probably the biggest thing in our favor
>was that we cracked their secret codes; something they never believed we'd

>realize that their code was cracked.
>
Always a problem.

The German codes were broken by teams at Bletchley Park, in England. The supposedly unbreakable Enigma codes were broken to the extent that often Bletchley Park knew the contents of an intercepted German message before the intended German recipient did.

The Japanese codes were broken by a team in Hawaii. The Japanese JN-26 and "purple" codes were broken early in the war.

But breaking codes was not the total solution because the Japanese did things like use code names for places. For example, in the spring of 1942, intercepted messages indicated that the Japanese intended to attack and invade a location referred to only as "Butterfly". Some USN analysts thought "Butterfly" was the Aleutians, some thought it was Australia, some thought it was Pearl Harbor, and some thought it was Midway. The Navy did not have anywhere near enough forces to defend all of the possible locations of "Butterfly", and no direct way to find out where it was. The best guess was Midway, but confirmation was needed.

So a phony message was sent by radio from Midway to Pearl Harbor using unsecure methods. (I think they used an old code that they knew the Japanese could read). The message said that the water distillers on Midway had failed, and to send parts and water ASAP.

The Japanese picked up the message and relayed it to their fleet, telling them that there was a water shortage on "Butterfly". The Navy had confirmation that "Butterfly" was actually Midway, and could concentrate the available forces

there.

As I understand it, if you have an FCC license - any sort of FCC station license will do - you've already given the FCC permission to inspect your station. At any "reasonable time" (usually interpreted as typical business hours) OR any time the station is in operation.

You gave them permission when you applied for the license, plain and simple. It's one of the "conditions of grant" for the privilege of operating a radio transmitter. This is nothing new - it goes back much longer than I've had a license (34 years).

Anybody with any class of ham license has already given the FCC permission to inspect.

For the past several years, I have led the CW effort at the local FD outing. Before me, there was little or no CW activity at the local club's Field Days. With the aid of a few local hams, we put a dedicated CW station on the air and kept it going around the clock. This station was in a tent and made many points for the club.

This year we upped the ante to TWO dedicated CW stations. W3RV led the effort for a second station, and put it right in the middle of the main operating area. It was so situated that visitors would see this CW station first. Lots of interest from both hams and nonhams.

In all cases we found that many people had never seen a real CW station in full operation, churning out the QSOs as fast or faster than the voice stations.

FISTS has begun setting up booths at some of the larger hamfests. The result has been lots of interest and lots of new members.

>This is not true.

I'm afraid it is true. I've done it myself.

>When I read this post I had to try an experiment. Put on
>any
>broadcast
>radio station and count how many words there are in a 1 minute of time. It
>will
>be way
>above 120 wpm. Even if you listen to a radio talk show, the people that call
>in
>talk at 120
>wpm.

That's about right - most people talk about 100 to 150 wpm. Broadcasters tend to be at the high end of the range because broadcast time is money and "dead air" is a cardinal sin in that industry. Also, most broadcasts use lots of prerecorded stuff.

So let's say 120 wpm for the average person talking.

>To state that a good operator can send and receive code at 120 wpm or
>faster is
>absurd.

Yep. But that's not what I said. Here it is again:

"Operators with decent skills can converse at effective speeds close to that of voice radio."

Note the term "EFFECTIVE speeds". What this means is that through the use of abbreviations and prosigns the CW ops can communicate faster.

For example, suppose I say the following on voice:

"Good morning, Bill. Good to hear you again. Are you going to the hamfest tomorrow? I want to go if the weather is good."

That's 24 words, and on voice at 120 wpm it would take 12 seconds to say if there are no pauses, umms or ahhs, etc.

Now try it on CW. There are about 100 characters in those sentences. In Morse speed calculations "word" is 5 characters, so we have 20 words. At 30 wpm (decent skills) that works out to 40 seconds - less than 1/3 the speed on voice.

But skilled CW ops would not pound out each word. The above would be sent as follows:

"GM BILL. GUD TO HR U AGN. U GG TO HMFST TMW? I WNT TO GO IF WX GUD."

49 characters in that - compression of 50 percent without loss of any meaning. At 30 wpm the above would take 20 seconds to send.

> Next try talking at 60 wpm. That is one word per second. You will
>sound
>like you
>had a stroke.

That depends on what is being said. If you have to repeat, spell out and phoneticize words on voice, the actual transmission speed drops like a stone. Sure, you are saying a lot of words, but the effective communication speed is far less.

> I am not a big fan of code, but I do realize there is a place
>for
>it. If you are
>going to argue for code, don’t make statements that are untrue

What have I written that is untrue?

Listen to a typical ham voice QSO. Lots of pauses, repeats and spelling out is needed to be clear in most cases.

Don't the broadcast services also have the requirement of "use it or lose it" attached to their licenses?
>
> Many foreign governments have that rule for amateurs as well under
> the theory that if you don't have any equipment you don't need a

Yup. In fact, some foreign governments required that a prospective ham first build
(not buy) equipment, and demonstrate skill in its use and an understanding of its design as a prerequisite for a license.

No Cecil, you know better if you are truly an experienced ham. Accuracy is the most important part of traffic handling. When using voice that means the use of phonetics when there is any question whatever of spelling or ANY other accuracy issue, and to be certain that the message was passed exactly as received.

You can still drive your car after someone else runs out of gas.
So what? It should be up to each individual how he/she prepares
for an emergency. The hams who choose CW should be free to use
it and the hams who don't choose CW should be free not to use
it. How is it that you dislike governmental control of guns
and like governmental control of amateur modes?

That's big of you, Larry, to give the FCC permission to say that.
Since the FCC makes the rules, what the FCC ultimately says is
all that matters.

It may or may not be a problem. You see, I don't need a calculator to extract square roots (and didn't use one on my exam when I went from zero to extra in one setting). Obviously, you will not be able to use a computer to decode the CW for you - you will only be able to use a word processor. Whether or not you can use a computer will depend upon the VEs administering the exam. Computers are not forbidden, per se, BUT - they can't contain the formulas for the written tests nor can they decode morse for you. Not everyone needs a computer to copy morse at 30, 40, or 50 words per minute.

>Mark, maybe because he is a legal counselor
>

Yes, I know Phil has donned his share of law enforcement caps and was (is?) an attorney for the FCC, (I hope I got that right, Phil.) hence my comment. Use the "letter of the law" in a courtroom, but don't try to demonstrate its righteousness on a USENET newsgroup in one breath while illustrating how the FCC holds a pistol loaded with a "bureaucratic an financial" bullet to the head of John Q. Public in another. "We didn't force our way in so it was voluntary." Yeah, ok.

I think the FCC does a great job, but I'd like to see them conform to the "normal" legislative protocol. Remember the Tucker family club callsign fiasco? Although I disagree with Mr. Tuckers reasoning, he did follow the "letter of th law" to obtain an inordinate number of club callsigns. Riley then decided that this violated the "spirit" of the rule and ordered some of the calls be taken away. Sorry Riley, but you know what?...Tucker beat you fair and square. If you don't like a loophole in your rules, then change the rule using the correct protocol, like any of us would have to do. prevent the next guy, but this one's through the gate already. Can you imagine this principle applied in a "real" court? If John Q. can't make up the rules as he goes along, then neither should Riley. Perhaps you statement applies to Riley as well, he is an attorney too. Lawyers make errors in judgement too, particularly when their views are biased in the direction of where their bread is (was?) buttered. This post is not a knock on Phil, we just disagree. It is a knock on Riley, he made a booboo. IMHO. Take care and 73.

Here's at least one corroboration of that. I tested for General (and passed, thank you) at the Houston FCC District office. The surroundings were "early bureaucracy", certainly, but I have no complaints about how I was received and treated.

Now after all these years, I totally agree with the original poster. My HF station is being sold on consignment, and I'm off the air. Life's way too short to spend it fending off all the dipsticks on the bands these days. It didn't used to be like that.

CW is a mighty popular mode. Why do you think that any such popular mode
should be excluded from the tests entirely?

> nor do I believe that is justification for a "mandate" that all in emergency
> communications should know (note the use of the word 'should') CW.

I don't think that anyone has proposed a rules change that would mandate
knowledge of CW. The present rule only mandates a one-time demonstration of
the ability to manually decode 5 wpm CW. I know a number of 20-wpm No Code
Extras who literally had the code key burying ceremony in their back yards
surrounded by all their friends.

APRS is a mighty popular mode, PSK31 (and all its derivatives) are mighty popular modes, etc. My point is that I think the licensing process should not include anything but written exams, none of which should be generated from the transmission of any particular mode (i.e., take CW out as a mode and simply ask questions on whatever would be asked about that mode).

Well, truly there is not a mandate, else all licenses would require knowledge of CW. However, my reference is to those individuals who herald CW as the save-all for emergency communication and who equate that with how serious one is about emergency communication preparedness.

Two other comments: what is a 20-wpm No Code Extra? They can't be No Code if they didn't take a CW test (without a waiver that is); and

I just can't imagine anyone being so affected by something such as a "mode" that they would bury equipment. But, there are nitwits on both sides of the CW debate and it is such a pity because it is such a devisive distraction.

>

Regarding focus, the FCC has had little focus on the amateur radio service
for many, many years. I think part of what you say, above, is correct. I
also think the FCC is responding to changes in technology, and changes in
the radio "business" in general. It wasn't until the de-emphasis on CW from
the military that this restructuring took place. I don't think that is
coincidental, but that is my opinion.

>

No one, Larry, "can really say" what dumbing down our service is or is not.
Not the FCC, not you, not anyone. Yours is nothing but a personal opinion,
more like just a vent for you to take out the daily frustrations you
encounter. One thing the FCC can do is demonstrate their confidence that
radio amateurs are quite capable and worthy of licensing without a beefed up
CW program--maybe without any CW program. I don't think they've been asleep
for the past several years. As a "self-policing" organization, it is also
self-evident that those who enter into the amateur radio service and take it
lightly on the air by acting like jerks are soon gone--because they can't
find anyone who'll talk to them after a while.

I don't know why you feel the need to state the obvious. The fact that you
espouse your negativism toward the amateur radio service and people also
doesn't mean that the ham community has to accept it as the truth, Larry.
So, we are well practiced in that area.

For one of the best submarine stories of WW2, read "Clear the Bridge" by the late Richard O'Kane, commander of the Tang.

After a hugely successful career, the Tang was sunk by just such a circular torpedo run with the loss of nearly all hands. Commander O'Kane survived the sinking and spent the remainder of the war as a prisoner of war. He was quite bitter that American torpedoes did not have a mechanism to detect circular runs and disable themselves.

I don't know what this has to do with rrap, but it's great reading anyway.

Often the Brits are given sole credit for breaking the German Enigma
codes, but the truth is they were able to do it only because the Polish
captured an Enigma machine and gave it to them.

I'm just wondering if stuff like this happens in other areas besides mine. Do you have repeater pinkos in your area that shut down the repeater if someone kerchunks (keys) it just once without IDing? You know the kind. And then that very same pinko who gets mad at you for not IDing shuts the repeater down proceeds not to ID before typing in the DTMF code to shut the repeater off? Ten minutes later, still no ID... Any other similar acts of pinkoism that you want to share with us? This is not ham radio. This is craziness. This is Pinkoism. We need to stop repeater PINKOISM!! NOW!!

The answer should be obvious - if you choose a three-dimensional
to two-dimensional mathematical transform, then the final results
will be that the earth (and everything else) is flat, i.e. two-
dimensional. I have a map of the earth hanging on my wall and it
is flat!

Everyone has their likes and dislikes. For the past quarter century,
hams who prefer CW over SSB have been in the minority. But I don't
expect that minority to diminish radically if the code requirement
is dropped. There's no law requiring cilantro yet some people love
it while others hate it.

Why do you think that popularity is an appropriate criteria whether a particular topic is selected for amateur examination? English is probably the most popular language used in amateur radio, yet I am unaware of any administration that includes an English grammar test in any of their amateur examinations.

Even if popularity were a consideration, it fails on the fundamental consideration for testing of determining and individual's competence for the operation of an amateur station - the avoidance of, or mitigation of interference or both. The on-off keying of the transmitter is an abiding concern of spectrum managers, but the encoding method is inappropropriate. If that were the case, then amateurs would be tested with the accented letters, or even kata kana.

>
It's true that the Poles gave the British a three wheel Enigma machine, and
that having such a machine was vital to the Enigma codebreaking effort. I
understand that a number of Polish code experts managed to escape poland before
it fell, and joined the Bletchley Park teams.

But having an Enigma machine is only part of the puzzle, because the machine
was ingeniously complex, yet simple and rugged. The coding/decoding sequence
was determined by four things:

1) Which rotors were selected to be used in the machine
2) Where each rotor was placed
3) Initial position of each rotor
4) Jumper settings on the plugboard

All of these changed every day, so even if an Enigma machine fell into enemy
hands it was useless without the daily settings. What the Brits actually
developed were methods for determining the above settings from intercepted
messages.

Later in the war, the Germans came out with a four-rotor Enigma machine, which
made the Bletchley Park team's job an order of magnitude tougher. The Germans
also used other encoding schemes, many of which were broken without the
codebreakers having any samples of the actual machines used.

One wonders how the Battle of the North Atalntic would have turned out if the
Polish, or the Bletchley park folks, had not done what they did.

I don't know, Steve. But I see several factors:

1) Has the Senate ever NOT ratified changes to the ITU treaty, particularly with respect to the ARS?

2) How long does ratification typically take?

3) If most of the other countries who are part of the ITU accept elimination of S25.5, the FCC could argue that S25.5 doesn't really exist anymore, even if the Senate hasn't ratified yet.

I can see ratification as a "rubber stamp" item on the Senate agenda. Also, I can see the FCC, if asked, having everything in place to eliminate Element 1 as soon as ratification happens, if not before.

And you can be sure that the FCC will be asked to do whatever it can as fast as it can if S25.5 goes away. My good friend Bill Sohl, K2UNK, will see to that.

The techniques used for FCC dfing can differentiate between two CB
antenna eight feet apart.

>I mean, hey...we enforce the same "laws" we make

The enforcement folks at the FCC have just about zero input to
making the regs (and a lot of times the reg writers actually ignore
their real-word experience) and of course have zero connection to
statutes passed by The Congress and incorporated into the
Communications Act.

>so; "We don't need no stinking warrant."

As I pointed out before - maybe not clearly enough - the FCC does
not and cannot under the law make entries and inspection by force,
which is the only time a warrant is necessary unless it falls into
one of the seven recognized exceptions for warrantless searches. By
directives of the U S Justice Department and FCC management, these
exceptions may not be used by FCC agents.

If the request for inspection is refused, there are other remedies
that the FCC can bring to bear, but the agents cannot force their
way into an inspection.

>You wouldn't happen to be a lawyer, Phil...would you? :-)

Some of my critics may wonder but yes, I am an attorney (and a
registered professional engineer) specializing in communications
regulatory compliance. I am retired from a career at the FCC,
lastly as the District Director in the San Francisco Field Office.
My specialty at the FCC was field enfocement procedures, warrant and
affidavit review, and management of asset seizures and forfeitures.

In the San Francisco FCC office we used that method from long before
I joined them in 1967 until we couldn't get any ancient tubes for
the oscillator in the mid-1970s. The first things that a new
receptionist learned was the dozen or so letters for each of the
staff members (to let us know we had a phone call) and not to put
her hand across the key contacts.

I don't know, Steve. But I see several factors:

1) Has the Senate ever NOT ratified changes to the ITU treaty, particularly with respect to the ARS?

2) How long does ratification typically take?

3) If most of the other countries who are part of the ITU accept elimination of S25.5, the FCC could argue that S25.5 doesn't really exist anymore, even if the Senate hasn't ratified yet.

I can see ratification as a "rubber stamp" item on the Senate agenda. Also, I can see the FCC, if asked, having everything in place to eliminate Element 1 as soon as ratification happens, if not before.

And you can be sure that the FCC will be asked to do whatever it can as fast as it can if S25.5 goes away. My good friend Bill Sohl, K2UNK, will see to that.

Hello All.

I have gotten lots of e mails in the last few years requesting a QSO for Sequatchie County, TN. There are precious few active hams here, and only two (including me) that are even remotely active on HF.

I am moving 15 September 01, and will be QRT from this QTH 13 September....Last call, y'all !

RSVP direct to k4yz@aol.com, please. QRV on 40, 30, 20, 17 and 15 meters...10 is kind of "iffy". Sorry, can't get on 80 right now. CW or SSB ok, but no digital modes at present.

Well, my tech (plus) test wasn't anywhere as stringent, but back then
you had to pass CW *and* written in the one visit. No partial credit,
i.e., no CSCEs. I did it at the NYC FCC office in some old building
I've heard is now condos in Manhattan. I had to send CW as well as
receive lots of 5 letter words. Then there was the general written.
Strangely enough, being a EE student in college at the time, I expected
to have a hard time with CW and not have much trouble with the written.
And pretty much aced the CW and almost failed the written! The
written had a question that required both regulatory and electronic theory
to answer. Something like "The B+ on your transmitter is 800V on the
final, up to how much current can the final draw?" IIRC, at the time the
regulations said "max 1 kilowatt fed to the final output tube" and you
needed to know that volts times amps in a DC environment = watts.
Multiple choice answers though.

The point I'm trying to make is that repeaters get keyed all the time by accident or people seeing if they are in range -- its not that big of a deal. Plus, I've got 10 minutes to ID, so what if I key the mic to see if I'm in range, then the next thing I know the machine is being shut down just before I am about to make a call. Its crazy, and its even worse when the people shutting down the machine don't ID at all.

Or, what if there is an emergency but I'm in a bad spot at the moment, or I need to adjust my power? To them it appears I am just keying the mic, but really I'm just out of range. But they shut it down anyway. So when I try again to call for help, there is no way I'm going to get it.

The Japanese code machines were based on Enigma with a lot of mods. One of the guys doing the codebreaking for the US Navy built one from his idea of how it 'had' to work and was proven dead on the nuts at the end of the war. Incidentally, the original came from International Telephone and Telegraph who tried to sell them for commercial encryption in the early 30s and gave up; kind of like the Christy drive on the Russian T-34.

We had a similar machine that is or at least was at the Field Museum in Chicago. Incidentally, the only unit evacuated intact from Corregidor was a Navy Codebreaking bunch. Probably really wanted them and had to take MacArthur as an afterthought.

I've read it both ways. I don't know where "Butterfly" came from, but I suspect
it may be an Allied code word or maybe have some significance in Japanese.

Either way, the story shows how the use of a little disinformation can have BIG
results.

This is the opening line of "Help Me Rhonda", a hit for the Beach Boys in the early 1960s. It is an atypical BB tune because it involves neither cars nor surfing, It is interesting because it can be classed as both a Song People Get Wrong and a Weenie Song.

Consider what the song is actually about: The singer is entreating Rhonda to help him forget another girl, who has dumped the singer for another guy. The song is almost entirely about the girl who dumped the singer - after the words "Rhonda you looked so fine", the singer alternates between the lost reams of the dumpee and entreaties for Rhonda to help the dumpee forget the dumper. One wonders what response Rhonda had for this thinly disguised request for a pity (deleted).

Just did!

The book is actually a dangerous weapon in the wrong hands. You can ruin someone's weekend by leaving a tape of Captain and Tenille doing "Muskrat Love" (the only known Top 40 ode to rodent sex) in the target's car stereo, set to play when they start the car. By the time the target figures out what is going on, the tune will be playing endlessly inside the target's head. Cruel but effective.

Yup.

Actually, for many years the test method has been to send a typical ham QSO. The person being tested can pass by either answering at least 7 out of 10 questions on the message correctly, OR providing one-solid-minute of copy.

Most would-be HF/MF hams come to ham radio with no Morse skill at all. So the test also measures the willingness and ability of most would-be HF/MF hams to learn something completely new.
>
>>The debate is really about whether those

See above. The FCC has said more than once that those things don't need to be tested. I believe the exact wording is something like:

"serves no regulatory purpose other than compliance with the treaty". Those may not be the FCC's exact words, but I think the FCC would agree with the meaning and intent.

More like 45 years, Bill. The renewal form used to require that a ham affirm that he/she could still pass all of the current tests for the license held. In other words, every 5 years or so, hams had to state that they could still do the code and pass the writtens. That was quietly eliminated in the 1950s.

There also used to be a requirement that hams actually operate a certain number of hours within a few months of the renewal date, but that was also eliminated in the 1950s.

Almost all US Navy submarine radio communications in WW2 was by Morse code.

--

I recommend the Taiho story as the classic example of how one person can make
all the difference.

--

The USN was not the only navy to suffer from circular runs of its torpedoes. At
least one German U-boat (U-869) appears to have sunk itself this way.

See

http://www.pbs.org/wgbh/nova/lostsub/

or search Yahoo on "U-869"

U-869, a Type IX boat, was lost with all hands 60 miles east of the New Jersey
shore, where it lies 230 feet down. The wreck was discovered in 1991 and only
recently positively identified as U-869.

This is bringing back an old game we played with the remote juke box heads in high school: do a dramatic reading of the song title adding 'Under the Sheets' at the end.

Mark Twain described a similar tactic with a jingle that happened to match the click of the rails. It infected everyone until it could be unloaded on someone else: Punch that ticket, punch with care, punch in the presence of the Passengair.

If you need a quick standup act, steal from Irwin Corey and do a dramatic reading of the lyrics to a well-known song. He did Mary Had a Little Lamb but any good Beach Boys tune (usually recorded with Dean Torrance doing the lead BTW) will do. I have used Barbara Ann. Turn it on, wind it out, blow it up, GTO.

My bent of late has been old Army songs, the real ones not those written for WW2. The music is easy because they became good Protestant hymns. BTW the Bonnie Blue Flag looks for Missouri to secede. Might you be familiar with God Save Ireland aka Jesus Loves the Little Children; there is a song out of the Philippine Insurrection that is a minor joy.

One of the big songs they get wrong was the theme to All in the Family, "Gee, the old LaSalle ran great"; that was recorded about 17 times with careful annunciation and it still caused complaints.

I am told that one of the band was picked up real quick to do a song in Spanish and sang One Ton Tomato at appropriate times.

Adios, Anonymous Putz.

Save the stupid stuff on 75 (that's been there since the Earth's crust
cooled anyway) there's hardly any difference in what's on the air.

You look for idiots, you will find them. You look for meaningful
interaction, you will find that too.

I'll give you $50 for the whole station, if you want out so bad.

Or a ditty from the Folk Era re the John Birch Society:

We're after Rosey Clooney, we've gotten Pinky Lee, and when we get Red
Skelton won't that be a victory?

Oh join the John Birch Society and help us fill the ranks. To get this
movement started we need lots of fools and cranks.

When you get some money in the repeater, you have the right to an opinion.
They are not common carriers and can set pretty much any rules they want. I
disagree with most repeater owners: I dislike bloops, beeps, and similar
caliope sounds and the seabag lawyers that infest them. My remedy and yours
as well is to stay the hell off the machine.

Dick N&#65533;BK

For those too young to remember HUAC, a pinko was a junior grade Commie.

Yep. It *is* much easier to decipher a code when you have the machine
that encodes it - and decodes it.

My mind was made up long ago. I'll use the best mode available to me
that works under the prevailing conditions. I assume others will do
likewise. Even if CW is all they've got available to them.

Jim,

That's excellent and it is what CW devotees can, should and will
do if they want to keep CW from slipping into total non-use when
code testing ends. It is clear that you (N2EY) understand that
you and other CW users have the burden of sustaining CW use
as opposed to demanding a government subsidy by mandatory
testing requirements.

Cheers,
Bill K2UNK

Think the lyrics were:

"My gal is red hot" with the reply
"Your gal ain't doodly squat"

I believe it was a J. Geils Band tune.

Yeah. Hey, there's only a few antenna questions, we can skip them. And only a few rules questions, skip them....Ohm's law? Naw, only a couple.....

To quote the late great Sen. Everitt Dirkson, "A billion here, a billion there, after while it adds up to real money."

Yes, and the funny thing about it is that the task, if that is what it is, will actually be easier when the 5wpm disappears. It is a whole lot easier to get a rookie up to journeyman level from scratch than to unlearn what it took to pass a 5wpm test. Ain't life fun????

Luv it.

For some reason there was a jukebox in my high school cafeteria (1968-1972).
Somebody used to sneak in just before lunch and load the thing with nickels,
then punch up "Ballad of The Green Berets" over and over, driving us nuts.
Revenge was exacted by vandals who carefully opened up the jukebox and replaced
"Berets" with Iron Butterfly's immortal "Inna-Gadda-Da-Vida" which ran a LOT
longer than "Berets". It lasted for hours.

Early Springsteen lyrics are excellent for this, especially when read in
Elizabethan or Shakesperean style:

"Baby, this town rips the bone from your back
It's a death trap, it's a suicide rap"

"Wrap your legs 'round these velvet rims
And strap your hands 'cross my engines"

At one point early in her career, Susan Werner (I think) did a version of Tammy
Wynette's "Stand By Your Man" that was a classic. Exact same words but
different tempo and emphasis.Completely inverted the meaning.

I knew I had really misspent my youth when I realized that I understood every
technical term used in any car song.
>
>My bent of late has been old Army songs, the real ones not those written for

I gotta get up to speed on those. I am more familiar with the Spike Jones genre, such as "In Der Fuhrer's Face" and the Phil Harris ditty about the unnamed thing he found floating in the bay (performed in the film "The Wild Blue Yonder"). Truly funny songs, such as "Lydia the Tatooed Lady", "It's a Good Thing He Can't Read My Mind", "I Wish I Were A Lesbian" and "The White Collar Holler" are few and far between.
>
>One of the big songs they get wrong was the theme to All in the Family,
>"Gee, the old LaSalle ran great"; that was recorded about 17 times with
>careful annunciation and it still caused complaints.

"Those Were The Days".

Only after many years and life experiences did I begin to appreciate how perfect that theme was for the show, and the true talent of Caroll O'Connor and Jean Stapleton.

Probably the most inspired use of music in a nonmusical TV show were the choices used by Johnny Fever in "WKRP in Cincinnati", one of the very first ensemble shows and a true comedy classic. It was inexplicably canceled when it was #6 or #7 in the overall ratings, despite repeated time slot changes. The network was afraid of its success, I think, just like Mrs. Carlson. A friend of mine actually put tape on the office floor when management refused to give him walls.

"I am a receptionist. Receptionists receive."
"I don't go for LITTLE gustos, Herb"
"As God is my witness, I thought turkeys could fly"
>

We need more of the same. At one time, wire- and radiotelegraphy were something almost everyone had seen repeatedly. Today that's just not so, and the few depictions in the media are usually fleeting and/or inaccurate.

Consider the 1997 blockbuster movie "Titanic". Millions were spent to insure exact historical accuracy in all areas possible. About the ONLY inacuracies are the fictional characters. But radio is almost totally negelcted - there's one tiny scene where the captain stps by the radio shack and talks to the ops. No depiction of radiotelegraphy at all.

The amateur radio press is almost as bad. When was the last time you saw an in-depth article on CW operation in the pages of a major ham magazine? If someone wants to know how to adjust a bug or straight key, the most recent QST articles I can point them to are from the mid-1950s.

> It is clear that you (N2EY) understand that

I've understood that for decades, Bill. So have many others. That's what FISTS is really all about.

Credit for our second FD station, and its placement, belongs entirely to W3RV. Brian pushed for us to be "front and center" where everyone could see and hear CW in action. It made a difference, lemme tellya.

There were several special purpose machines developed by the Bletchley Park teams for code breaking. Alan Turing was involved in many of them. He was a true genius whose work is very under-appreciated.

Whether any of the machines built were true digital computers is doubtful because they were all special-purpose machines, not general-purpose computers. Worse, many of the details were lost to secrecy. The "Colossus" may have been a true electronic digital computer, but all examples of it were destroyed in the 1950s and the plans and files burned.

No, I'm not assuming that, Cecil. Conversations in Morse are sped up by the use of abbreviations, as demonstrated in another post. 2:1 compression without loss of meaning is easy.

Phoneticization slows down 'phone even more. On CW I send "NAME JIM". On 'phone it's "My name is Jim - that's Juliett India Mike, Jim".

>Morse is about the same throughput as spelling out English words
>using letters and/or phonetics.

Depends on the situation. CWops with decent skills are faster than you describe.

I don't think there's any plea bargaining going on here. All Riley was going to do was modify this guy's ticket. It was implied that if he wanted to fight it, the ticket "might" be revoked. Next thing you know, Riley gets a letter from this guy's attorney claiming that Riley's overstepped his authority and the modification order is null and void and they wish to take it to court, I believe a "real" one, (with real meaning NOT administrative) to prove otherwise. No doubt, this guy's gonna get his clock cleaned. I'll try to find the thread on QRZ and post it. Take care and 73.

3664. Re: Best Six Meter RIG ???

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-10 13:06:03 UTC
From: k5dh@raytheon.com
Message-ID: <%U2n7.2$JB1.117@dfw-service2.ext.raytheon.com>
Source record: 19959
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space,uk.radio.am

Interesting situation here...

As of the time I am posting this, N1RZB had received a total of eight responses to his inquiry, and not one of them had anything to do with answering his question! Instead of helping the guy, everyone gripes and whines about cross-posting!

Yeah, I know that there are both written and unwritten rules of "netiquette", and perhaps N1RZB shouldn't have posted his query to some of the groups that he did post to. But perhaps we need to take a closer look at this. What's happened to the hobby? What's happened to hams being helpful to each other? Instead of getting an answer to his question, all he gets is bitched at by a bunch of self-appointed "interenet cops". We keep hearing that ham radio is "dying out". It's no wonder! When someone can't get a straight answer to a valid ham radio question, or get ANY answer in this case, it ain't hard to see why people aren't sticking with the hobby. I've heard it said that the internet is killing ham radio. This is a perfect example!

I wish I *could* give this gentleman an answer, but I really have no personal experience with six meters. I'm sure I'll be flamed for cross-posting this message, and for being one of the people who isn't giving the guy any help. At least I'm WILLING to help... I'm just not ABLE to help.

At the last Intel talent show at which I performed, I sang "Stand By
Your Man" and "Put Another Log On The Fire". The wives of the guys
I worked with wouldn't even speak to me after that. "If you love him,
you'll forgive him", seems to have a somewhat different meaning when
a man sings it. :-)

Try land surveying and see how far you get with the flat earth concept.
Look at a good plat map and you'll see many corrections and non-standard
sized sections which are necessary to correct for the roundness of the
earth. Flat it's not.

3672. CC&R's -- How easy to avoid?

How easy is it, these days, to find houses to buy that aren't covered
by CC&R's that restrict Amateur Radio?

I'm not limiting my search to new homes or city living.

Just curious,

I've been looking at the new RCI 5054 (over Internet not in person yet) and thinking it didn't look like to bad of a deal ($300), I just wish it had the tone board already installed and not an 'add on' like it is now.

That depends on the area of the country. In areas with lots of older homes, it is relatively easy -- most houses built in the middle of the last century or earlier are CC&R free in New England.

>I'm not limiting my search to new homes or city living.

Almost everywhere, to get a CC&R free home, you will have to either go for an older home (with its generally smaller size than most new homes today; increased maintenance cost, etc.) or live quite far away from the city. How many hams would like to drive 50 miles to get to work? I sure wouldn't.

>ARS down the throats of those who disagree.

First, it was the FCC, not any of us here, that changed the rules.

In what way do those rules changes change what you can do within Amateur Radio?

Why do you call the current requirements dumbed down? You couldn't even answer
a simple question on electromagnetics from the current General Class material.
Perhaps you should study those "dumbed-down" requirements a bit more...

>The FCC regulations only define the legal limitations of what radio
>amateurs can do with the spectrum allocated to them.

Under the present rules, they also define what requirements must be met to obtain access to that spectrum. Or can I infer from your use of the word "only" in the above statement that you believe that they should not define how people enter ham radio, but only what they are permitted to do once they obtain access to the spectrum? Can I also infer that you believe that what we DO within ham radio is more important than what we do to enter it?

>Defining the true nature of the service is something that exists on a higher plane...

Larry, if you are now thinking that you are a higher plane, I think I have to disagree. :-)

>

I will, too, Dick.

What I don't understand is why some hams want to see rules that support making one of those modes more likely to be available to hams when the mode they are trying to promote is not the most effective one.

I think it would make more sense if we first had a rule that required that a ham keep a working station available for emergencies. I am not proposing that the rules do that, but noting that requiring a ham to learn one of the modes available is really starting in the middle -- if the purpose of the CW test is to enhance emergency communications, as stated.

95% of the Very Good Things that you described have nothing to do with CW or your passing a CW test. If the reasons you want to see a CW test really ARE related to emergency communications, perhaps you should seek rules changes aimed at the first through tenth resort rather than the last. Why are you not proposing a rule that requires hams to keep emergency power capability available at all times?

Are you SURE you don't want to see CW testing just to keep your favorite mode alive with affirmative action?

Well, I'm also hoping to get a couple of acres or 10 :^) for a decent antenna farm, which probably means getting something a little out of downtown. I'm also blessed with a wife who's an interior designer; she doesn't think a whole lot of most of the new homes out there, and sees remodeling an older home as something that could be quite worthwhile.

So I'm fairly flexible on this. I had heard that getting a new home was pretty much impossible without a CC&R.

I strongly dislike CC&R's that restrict Amateur Radio, in general, though. As I see it, there's a compelling public interest in letting hams put up reasonable antennas.

>APRS is a mighty popular mode, PSK31 (and all its derivatives) are mighty
>popular modes, etc. My point is that I think the licensing process should
>not include anything but written exams, none of which should be generated
>from the transmission of any particular mode (i.e., take CW out as a mode
>and simply ask questions on whatever would be asked about that mode).

But one of those modes is copied almost exclusively by ear, and it would make sense that a test about that mode include a test of the ability to do so. In PSK-31, etc, the written test is reasonably adequate to test the applicants knowledge of that mode. One could say that the ability to copy phonetics is also done by ear, but, IMHO, a written exam is adequate to cover that subject. One cannot reasonably say that a written test can cover the ability to copy CW. (What is the Morse encoding for the letter J? di-dah, dah-di-dah, etc. -- doesn't cut it.)

So that leaves a test measuring the ability to copy sent test as the most logical way to test the ability to use the mode. The change I would like to see, however, would be for the mode's emphasis to be the same as it is for other modes -- with a reasonable and appropriate number of questions about the content of sent text, with the answers being part of the overall score? Get the PSK-31 questions wrong? Get enough right and you pass. Get the Morse code copy questions wrong? Get enough right elsewhere in the exam and you pass.

My personal speculation is that the FCC will be hard to convince on this one, but having such a copy test, with the right answers being part of the overall score, could, IMHO, be a reasonable compromise.

>mileage on good roads is very easy on a car, while stop-and-go city
>miles on potholed streets is very rough service.

> * * *

>Another factor is climate.

The truck spent the first 15 years of its life in the New Mexico high desert. The old timer who had it didn't put a lot of mileage on it, but the several-mile long dirt road to his residence was, I am sure, brutal. He worked as a caretaker for an abandoned mine, hired cheap and allowed to live in the trailer as part of the deal.

The road to his house was ALMOST as bad as my driveway (200 feet of 15% grade potholes). :-)

Amen Bro. Which brings up how men look at women. They do not understand that Playboy is no threat to them, that there are classes of interest: some you show up with to impress your friends and give them cab fare home, some (Joan Lunden and the morning show ladies) that are perfect and you know they are perfect and about as attractive as yesterday's toast, and some that would be great to know and a lot of fun (Jo Jo), some that affect your gonads about like the exhaust note of a Healy 100-4, and some you can see living with. Bailey was one of those that showed signs of being being one of the latter three without you ever being sure or even which one.

>supporters. Of course we all know what Bill Cross is going to do. And
>the commissioners.

If the majority of ARRL members were to want the ARRL to "offer support" for Morse code testing, that is exactly what I believe the ARRL should do. The positions of the League wrt regulatory matters should NOT be what the Commission will probably do; those positions should be what the League believes to be right for Amateur Radio.

>> The ARRL policy will be ignored by the FCC. End of story.

>Exactly what is expected. One wonders what would happen if something
>threw a wrench into the works.

IMHO, the entire matter is a least a few years away. Although I have iterated the current ARRL policy, IMHO, how, or if, that policy may change over the coming years is wide open. Five years from now, the makeup of the ARRL Board of Directors is apt to be different, as will be the makeup of the ARRL membership. Over the past year, just judging from some of what I have seen, some members have resigned over disagreement with the ARRL asking for for 4 classes of license with a 12 wpm max; others have since joined over the ARRL's decisions that once the rulemaking is over, it is time to get back to ham radio. Both factors have changed the makeup of the membership base.

As the time is approaching, those who have views and would like to influence ARRL's decisions about how to respond to any rulemaking procedure should do just what I am going to do -- let their ARRL Director know what they feel ARRL should do. Those in the New England Division that disagree with me better make sure they cancel my input with their own. :-)

I think that at a transmit rate of about 45 wpm, the statement that the throughput would approach that of voice is exactly correct. Even at a slower rate, the throughput approaches what I would consider to be "conversational" speed.

It is CERTAINLY faster than most people type, but I don't see ANY of arguing about the utility of Internet conversations because they don't occur in real time or at 120 wpm...

> N0YM

Jonathan,

It is tough to find a newer subdivision (from about 1980) that does not have some CC&Rs that could cause problems for antenna installations.

I ran into this problem recently when looking at new construction in my area. No antennas of any kind, other than a small sat dish. There were also prohibitions on the number of pets, and the logos on company vehicles. Sometimes you have to make a choice. I enjoy amateur radio and feel that I need a modest antenna system. My wife shows dogs in Breed and Obedience. These are some of our life's activities that are important to us. In the end we elected to keep our more modest house in an older subdivision where no CC&Rs exist. At some point we might build well out into the county's more rural area on some acreage outside of any established or planned subdivisions.

It has been my experience that if the CC&Rs have not been enforced for a ceetain period of time, they become un-enforceable. There are many desireable older subdivisions. Look for TV antennas on the roof or old TV antenna twoers that have not been taken down. Check out the local pet situation. If you see pets in the back yard, it might be a clue that either CC&Rs either don't exist or are not enforced.

Good luck on your search

Which always makes me gape in awe over the comments of some in here.

Especially those who accuse the ARRL of some sort of dark, back room
policy making that ultimately changes the "policy" of the League. (esp, as of
late, the code issue)

It IS a membership organization...A few years ago the League was staunchly
pro-Code since that was the majority of the membership's preference.

Now it is not, yet some of those who LIKE to take jabs at the League
accuse them of not sticking to thier "original" stance, as if it were engraved
in stone. The League is actually changing to reflect the opinions of the
membership and those who are accomodated get offended...Go figure!

>As the time is approaching, those who have views and would like to influence
>ARRL's decisions about how to respond to any rulemaking procedure should do
>just what I am going to do -- let their ARRL Director know what they feel
>ARRL

Bingo. Get active. Don't expect the Directors to acquire ESP upon
election. Only unlicensed ex-technician types have that skill, and they can't
be voting members of the League without the license.

Oh well...Our loss, I guess....

Even without Q-signals, eliminating all the "uuuh's" and "aaaah's" that "fill" a sentence, you have increased throughput. Further reduce the number of times you have to go back and phonetically clarify similar sounding letters or words, and you improve on that even more.

I commented in that thread. I stayed fairly neutral because I didn't consider
it worthy of "going to battle" over. It got pretty ugly as the thread grew.
It's actually kinda amazing what some people will overlook as long as the end
is to their liking. Here's the thread.

http://www.qrz.com/article.pl?sid=01/07/31/1016224&mode=thread

It's called Problems with Hollingsworth's License Modification. I suspect the
"plaintiff/defendent" doesn't really care about having his license revoked, I
think he just wants to put Mr. Hollingsworth's authority to the test and make
him do it "the long way." (That is, work for it.) Happy reading
.

Thank you for pointing out that a 2 dimensional rendering of a 3
dimensional object is 2 dimensional. The world is now enlightened by
your brilliance.

Well, I suppose, in all honesty, I'd have to add that people boasting
about being "20 wpm Extra"'s is sort of like throwing a gauntlet down
for me. So if rabid pro-coders want to take partial credit for me
wanting to get my code up to speed, that's fair game :)

Still, I like the mode and want to learn it, regardless. I can't
speak for all hams, but my main reason for learning it is because it's
there.

And being able to use IC's doesn't get one away from understanding
basic electronics (IC's are electronic devices, after all),
electromagnetics and antenna construction, etc.

Finally, I'll add that tubes and discrete components still have good
arguments going for them in a number of areas.

First, Bruce, I want to apologize for the harshness of my original
message. It was late, and I was sleep deprived.

But I must confess, you seem to have a real aversion to all things
new. This I don't understand; ham radio has frequently been on the
cutting edge of technology.

Do we have some hams that get their license, buy a radio and do
nothing but talk? Of course. And frankly, I don't see anything wrong
with it -- we are all about communications, after all, and such people
can definitely meet real needs (e.g. public service).

But there are many, many hams out there who are interested in the
technical side of things, as well. And simply because they work with
new technology (rather than rehash old) doesn't invalidate their
efforts.

Forgive me, but you seem to have a very narrow definition of what's
acceptable.

Jonathan

Unlike you, Dean, I don't have any poignant predictions to make about the future of the hobby, but it is VERY clear what will happen to the newsgroups if people aren't discouraged from cross-posting to ten groups at once. THAT insight doesn't require any soul-searching at all.

What the original poster did was every bit as much a part of "the hobby" as tuning up a 2KW transmitter in the middle of the band without bothering to turn on his receiver first. Crossposting to 10 unrelated groups is an act that could only indicate careless naivete on the part of a newbie, or extreme discourtesy on the part of someone who should know better. A quick check of Mr. Moge's extensive posting history on Deja will reveal which of those two options is most likely to apply here.

Followups set to the appropriate group...

>
> I'm not limiting my search to new homes or city living.

The answer is "it depends".

- Develop a clear image of what antennas you want to put up, both now and in the future.

- Find a good realtor and make SURE he/she understands your concerns. Most do not know what ham radio antennas look like, and when you say things like "antenna", "tower" or "beam" to nonhams, they may have no clear idea what you are talking about. Pictures of the kind of installation you want can be a big help.

- Get the services of a competent REAL ESTATE attorney. Most people do this anyway, but it's extra important to have somebody on your side who knows where the bodies...err, ordinances and deed restrictions... are hidden.

- Research the deed restrictions, covenants, homeowner's agreements, codes, zoning, ordinances and other limitations of the places you consider buying, have your realtor and attorney do the same and compare the information from all sources. Learn the differences between the various terms, and whether they can be changed or not.

- INSIST that you get copies of ALL deed restrictions, covenants, homeowner's agreements, community agreements, ordinances, zoning rules, codes, and other applicable limitations on your use of the property. Make all offers and sales contingent on your approval (and your attorney's approval) of this information. In many areas, no one will give you this information unless you specifically demand it by name. They have to give it to you if you ask for it, though.

- Be aware that most development-type housing built since 1970 or so has all sorts of covenants and deed restrictions on it. Almost all newer housing is based on the aesthetic idea that there should be no visible wires or antenna-like things on anybody's property. But even older homes can have restrictions. My current house, built in 1949, has a page and a half of fine print deed restrictions that were put there when the land was subdivided from a farm.

- Check out various articles in the amateur press about the subject. One QST article that I remember clearly had the title "But I Never

Agreed To That!" or something similar.

- Get EVERYTHING in WRITING.

- Be aware that changing things like deed restrictions and covenants can be almost impossible, because they were specifically designed to be unchangeable.

Yes, it's a lot of work, but it's the only way to be SURE you don't buy a place that has hidden restrictions.

Good luck!

Quite inaccurate. That web page is one of several "character biographies" of a computer role-playing game (RPG). It is entirely fictitious. Neither does it have any relation to the Star Trek shows despite the "trekkie" in the web address.

What is interesting and worthwhile to point out here is that this RPG involves "tough combat veterans" who have turned mercenary. All the characters are described in terms of fighting capability...which is indicative of the mentality of those frequenting such sites. In itself this would indicate that Robeson knows of such a game or frequents them. All RPGs are fictitious and trying to compare game characters to real people in this newsgroup further indicates an inability to differentiate between fantasy and reality. Robeson appears to desire "toughness" via military fighting to make his newsgroup points.

Amateur radio policy matters are very much a part of reality and should be treated as such. However, many long-timers seem to prefer the fantasy and myth "traditions" of long-ago amateur radio that they insist should be kept today. That also is an inability to differentiate between fantasy and reality.

>speed.

Interesting comparisons which favor CW over anything else.

The comparisons have a morse letter string using much
abbreviation...then a voice conversation which has been
padded out with more words than usually employed by
voice users.

It may be that "conversational CW" is rapid to the
experienced morsemen but it is only comparable to voice
of some very slow, hesitant talkers unsure of what to say.

For a comparison of "conversational voice" try listening to
the Approach, Departure, or Tower frequencies at urban
area airports. That is "conversational voice" at a rapid rate
using aviation jargon equivalent to high-rate "conversational
CW."

>It is CERTAINLY faster than most people type, but I don't see ANY of arguing
>about the utility of Internet conversations because they don't occur in real
>time or at 120 wpm...

"Most people type" at reasonably high rates if they've had any
touch-type training. While I can "cruise" type at 50+ WPM and
burst-type at 80 WPM equivalent, those who use a typewriter
daily can cruise-type at 60 to 70 WPM and burst at an
equivalent to 100 WPM. Such rates are on mechanical or
electro-mechanical typewriters...or on computer keyboards. The
limit on typing speed seems to approximate individual digital
dexterity plus the visual cognition and reflex transference to
motor nerves in the hands.

For another example of "conversational" typing, see the
"chat rooms" of BBSs of 15 years ago and the "chat
rooms" of some ISPs of today.

A claim that "most people" type slow is not verified by life at keyboards (mechanical or computer) today. Yes, some have never learned to touch type and "think" words directly to a medium (as touch typists do) but they are no longer the norm and may not be the average.

PSK31 by G3PLX was deliberately set at lower rates to accomodate the "hunt-and-peck" typists who rarely reach 40 WPM (see Peter's own explanation). Along with a "microcoding" of characters, this also enabled a low data rate to preserve bandwidth.

Some in here do not consider newsgroups about amateur radio to be "real" amateur radio, therefore any comparison of typing here to the "real" amateur radio involving CW and morse codes is invalid. :-)

>No, I'm not assuming that, Cecil. Conversations in Morse are sped up by the
>use of abbreviations, as demonstrated in another post. 2:1 compression without
>loss of meaning is easy.

Use of abbreviation, jargon, terms unique to a radio service is also
common on voice and also permits a faster throughput than in
"conversational" voice. For an instant example, monitor the
"conversations" on the civil aircraft band (particularly in crowded
urban airspace), police or fire or other public service radio.

No doubt there will be the counter-argument that such "isn't
ham radio" until we get to the following -

>Phoneticization slows down 'phone even more. On CW I send "NAME JIM". On
>'phone it's "My name is Jim - that's Juliett India Mike, Jim".

Monitoring of amateur radio 'phone will reveal that
"phoneticization" (use of the phonetic alphabet) is
not universal nor is the style of phonetics in the
"proper" NATO manner. Some have been heard to
simply spell out the letters so that the above would
come out as "Name is Jim, jay-eye-emm." :-)

>>Morse is about the same throughput as spelling out English words
>>using letters and/or phonetics.

False. Morse may be fun for its devotees and the
experienced code ops can be very rapid, the the rapidity
is really in comparison to "average" morse rates.

>Depends on the situation. CWops with decent skills are faster than you
>describe.

Claim...not verified by numbers.

>> It's mostly a strawman argument.
>
>Not when you've done it, as I have.

About 15 years ago I was at a seminar luncheon when a
couple of hams brought up such claims of "having done
it, also." (seminar was on high-speed data transmission)
The morse speediness was challenged by another long-time
amateur. For a comparison we used a transcript of one
of the preceding day's short presentations, about 15
minutes of talk followed by about 10 minutes of group
questions and answers. One of the non-ham engineers
had recorded the session on a small tape deck so we
could verify the actual time. The presentation itself went
at about 140 WPM equivalent voice and included long
pauses for Vuegraph changes (PowerPoint was yet to
come) and a number of long technical words. The Q&A
session had more pauses and breaks with the voice rate
averaging 110 WPM equivalent. I could double-check the
numbr of words by the double-spaced, typed transcript,
converting them to an equivalent of one word equalling 5
characters and one space. The presenter seemed to talk
at an "average" rate, as were those who asked questions
in the Q&A. A couple of Vuegraphs were re-presented
during the Q&A, taking up more time. Pauses and time
for changing slides were not in the typed transcript.

This example is not based on "amateur radio" but rather
given to give some substance to voice rate. Those who
bother to honestly compare can simply tape some CW
and 'phone conversations on the ham bands and determine
the communications rate off-air. Voice will be faster by a
about a factor of four when using average 'phone and CW
communication examples.

A lot more depends on how you drive it. Short runs that do not allow the engine to heat up are big killers as well as not changing the oil often enough or letting the oil level get low.

I tend to abuse cars and I have to say that my old 1986 Mazda 626 held up well as well as my 1992 Ford Ranger. My dad is an even bigger abuser of vehicles and can only get about 150,000 miles out of a Subaru. The Mazda went 240,000 miles on the original motor, clutch and tranny before we sold it. The Ford I hope will make 200,000 on the original engine, clutch and tranny before I sell it or it dies. On both of those cars I averaged about 12,000 miles per oil change with the occasional No Oil Pressure light coming on from me failing to check the oil level. My drive to work is 33 miles each way up and down canyon roads in the colorado foothills. A set of tires lasts 1 year due to all the hard cornering. I once bought a good set of thires with an 80,000 mile warranty. They lasted 15,000 miles.

My wife's Karman Ghia went 250,000 miles on the original engine (head job at 90,000) before it was totaled from a rear end accident by a Ford F150 . She religously changed the oil every 3 months and it was in Southern CA.

By definition, *amateurs* don't *make their living* as traffic
handlers, CW or otherwise.

> Tghe fact that all of this is foreign to so many hams goes far to
> show that hams by and large don't care much about traffic handling
> or emergency operations.

We're talking about cross-language capabilities here. Since amateur
traffic nets are by law almost exclusively domestic, there is little
need to understand different languages in Morse code (or otherwise).
And I can't recall the last time I heard about emergency operations
conducted on any mode other than voice or image.

With all kind wishes,

Certainly this varies by state, but there are two issues:
1. Are there CC&Rs?
2. Is there an incorporated home owners' association?

In this part of the world, most newer homes have CC&Rs attached. Read them carefully before closing. BUT, also in this area (Texas), city and county governments do not get into the CC&R enforcement business. It is left to individuals and/or HOA's. The neighborhood I live in does not have an incorparated association but by CC&R prohibits free standing basketball hoops, outside storage buildings, satellite dishes, radio antennas, tall fences, and the list goes on. As soon as the other neighbors violated the the dish and building rules, my antenna went up, and nobody sneezed. Find a neighborhood like this and you're in like Flint!

To get an "apples-to-apples" comparison, I dug out our club (W0EF) Field Day logs for the past 6 years. The information exchanged on voice is identical to that exchanged on CW in this contest, and operation is conducted in both modes at the same time, so there is no propagation difference.

We are blessed with several "competition class" voice and CW operators who know how to run a frequency (N0AT, K0AD, K0QB, K0TK, just to name a few).

I compared the "best hour" of the CW tent vs. the "best hour" of the voice tent for each year. On average, the ratio of voice to CW contacts was 3.21:1 over a span of 6 years. The lowest ratio was 2.46:1 (1995) and the highest was 3.93:1 (1997).

This is admittedly a small sample, but since you have access to many more FD logs at HQ, you might randomly select the logs of a few high scoring clubs and make a similar comparison.

You might also compare the "best hour" voice vs. CW of a topnotch SS station like K5ZD, K3LR, K6LL, or W0SD. I'll bet you'll find similar ratios, although they may be skewed because voice and CW weekends are two weeks apart and may have different propagation patterns.

With all kinds wishes,

I think that your estimate is about right for the conditions stipulated. Other factors, though, such as the possible reduced availability of CW contacts to make may be a factor.

A definate factor related to the discussion at hand is that in the Field Day exchange, there is no opportunity to abbreviate any common English words. That may make the CW/voice data rate closer to 2:1, by my guess.

Of course, if one compares data rate to bandwidth, how much data can be exchanged with manually decoded OOK CW in a 2500 Hz bandwidth? :-)

I didn't know I was on such a "thing," Ed.

I'm questioning only the claim about "conversational voice speed"
being approximately that of morse code at high rate with
extensive use of abbreviations in the morse code "text."

I hear slow, halting "conversational voice" at a rate of about
80 to 100 WPM equivalent...in my terms of "conversational
voice" which would be the droning kind of slow speaker
having lots of "ums," "uhs," and "ahs" in it. Your mileagee
no doubt varies.

For that matter, the FCC does NOT reference any standard,
specification, recommendation, or anything else to define
morse code rate. The referenced document for morse code
in Part 97 only establishes recommended dit, dah, and space
timings. Nothing is given for a "word" speed.

>>It may be that "conversational CW" is rapid to the
>>experienced morsemen but it is only comparable to voice
>>of some very slow, hesitant talkers unsure of what to say.
>
>Yes, I think you have correctly interpreted my meaning of "approaches a
>conversational rate."

I don't know. I can establish an equivalent voice word rate for
comparison to data or morse code by using a verbatim
transcript typed double-space on 8 1/2" x 11" paper, doing
a word count and converting that to a character count and

then converting that to 5-character "words" plus a space.

But, there is NO federal document for word rate of morse code given in Part 97.

Everyone is under the impression that it is specified to a "common standard" (5 characters per word plus a space) but nothing in Part 97 specifies that rate.

It is like comparing avocados and orangutangs.

If you want a "conversational voice" rate then have a conversation with actor John Moschitta. [talk about throughput! :-)]

Brand new home without antenna restrictions. The only restriction
I know of is you can't put a mobile home on the property.

> How big's the yard? Big enough for a few 180-foot Rohn's?

It's got a big back yard - 180ft would be no problem. There's two
~400 ft towers and one ~300ft tower within a quarter mile of this
house. At the rear of the back yard is a creek with a cow pasture
on the other side so you could probably even put in some rhombics.

What it is it that is so obscure about "CW is the most simple, easy to
implement and ubiquitous mode, present on every SSB voice rig, in fact
it is the most basic, bottom-line radiocommunications. But it is usable
only if hams know it"?

I don't think he did. At least he shows he really has no experience at handling radio traffic, either at voice or CW. Any mope can type into a TTY terminal or computer keyboard. It takes a trained specialist to accomplish accurate transfer of messages by either voice or Morse code. Clearly Len knows nothing of the requirements to successfully utilize either mode.

Just for the record, I have 20 years direct experience at *accurately* handling message traffic in non-amateur circuits where accuracy was a primary requirement, using both voice and keyboard modes. And NO direct experience at using Morse code to handle such traffic, that has all been amateur experience.

Righto, Bucko, and forsure I didn't intend to indicate otherwise. In
fact I don't think I did. But of course you know that there has been a
body of material available to CW ops over the years designed solely to
convey information in the most universal and accurate way.

A good point, but it does miss some possible reasons why US hams might
need to use CW. Large scale disasters abroad where no mode other than CW
was avaialble to those involved would make necessary that US ops use it,
if the traffic was to be handled. Unlikely to happen under any *normal*
circumstnces, as we all know. We don't know what abnormal circumstances
the future holds, nor for whom.

> And I can't recall the last time I heard about emergency operations
> conducted on any mode other than voice or image.

Routinely, that pretty well takes care of it, as we all know. However
the last round of hurricanes brought out two cases where emergency storm
traffic was relayed to the State EOC when condx deteriorated below
mimimums for SSB. One case was in Savanna, Georgia and the other in
Texas.

I don't think anyone misses your point, Dick. I think many disagree with it, not in terms of the statement itself--but in terms of the efficacy of CW as a viable alternative to other modes of communication in a disaster; or any other time for that matter. If the predominance of individuals do not know CW, then CW is not a viable alternative for communication. There is a predominance of other modes available for emergency communication--each with its own benefits and caveats. None of us can be prepared to use or have available all of them.

Short-run driving mandates regular and lower-mileage oil changes.
Otherwise the moisture that condenses in the crankcase is bad news.

We have a 1990 Chevy S-10 that the XYL drove to work daily for 10 of
those years, all of a mile from home. Then that same mile home after
work. Just far enough to get it loaded up with inevaporated moisture. So
I made sure it got regular 3,000 mile oil changes, more frequent in
colder weather. The engine seems as good as ever, but last spring before
the XYL stopped using it for work I had it's sixth exhaust system
installed! They just rust out and rot way from all the moisture. That
is, all after the catalytic converter. It runs hot enough to dry itself
out.

"Reasonable" is the rub. What is reasonable?
To forstall any unforseeable circumstance that might circumvent their intent, most just forbid any outside antennas, or worse, all added antennas. That is not reasonable, and uch severe restrictions should not be allowed to stand. Unobtrusive wire antennas can't be said to be unsightly since they can be made to be virtually invisible. Towers and large arrays are another matter. Surely there is a "reasonable" accomodation that can be made in favor of ham radio, and some other services as well. There has to be a change in the future of CCR's.

>If you lose, you are still eating lobster!

There is a way to do this.

Jim says Cecil will lose. Ed says Cecil will lose. Cecil says Cecil will win.

Jim, Ed and Cecil meet at a lobster place and Jim stipulates that Cecil wins provisionally. Jim buys the dinner and everyone is happy. (Jim already owes Ed a lobster dinner so two birds are eliminated with one rock).

Suppose that the S25.5 nonsense drags on so long that Cecil (unfortunately) wins. Ed and Jim take comfort in the fact that Cecil did in fact collect on his bet.

Now consider the reverse - S25.5 is eliminated and code testing disappears soon after. Cecil loses the bet. He now owes two lobster dinners - one to pay off the bet, and the other to repay the one he got for provisionally winning. Ed and Cecil and Jim again get together and again enjoy lobster.

Some may argue that the bet is not exactly even, but the basic concept is clear: Stipulate that Cecil wins provisionally, pay off in advance, and if in fact the decision goes the other way, Cecil pays off double.

It's a way to have lobster and eat it, too.

Waddya think, sirs?

All except emergency communications, Dick. That is the function
where ham radio earns its keep and is the only really useful
function remaining IMO.

He needs to get a better lawyer, one who knows how to read the
Communications Act (an act of The Congress, passed by the folks for
whom we vote) and a good practice manual on Federal Administrative
Law.

He will get a hearing on a modification or revocation order before
an ALJ, appealable to the Commission. If he loses then it's off
to U S Court of Appeals who will rule only on the procedural issues
(whether the FCC followed the book or not). There's not enough
pizazz in this case for them to even look at the substantive issues
(what he did and how he got caught).

No big deal. The case will be passed to a litigator who usually
takes on the likes of NBC or ATT, and the licensee will be chewed
up and spit out. I used to like thoae cases because they always
taught me some new wrinkle of law.

641 Washington Street, on the waterfront. The examiner was Charlie Finkelman, complete with bow tie, the prototype for calling FCC folks "Uncle Charlie". I took my Novice, Tech and General tests there (1952 and 1962, respectively) as well as ny Second and First RadioTelephone (1952 and 1953). A close friend of the family worked in the same building as a claims examiner for the Department of Labor, so I would always stop in and see her when I was in the building. In later years she was my mentor and role model for entering Federal service and was a very attractive and charming woman, now deceased.

The rats finally won against the people, so the building was evacuated, gutted, rebuilt, and sold to the private sector as many classic and classy Federal government buildings were under the Carter and Reagan regimes.

>I had to send CW as well as
>receive lots of 5 letter words. Then there was the general written.
>Strangely enough, being a EE student in college at the time,

Where were you attending? I was in EE school in NY (The Cooper Union) at the time I was taking those exams. Several of my classmates were hams.

>I expected
>to have a hard time with CW and not have much trouble with the written.
>And pretty much aced the CW and almost failed the written! The
>written had a question that required both regulatory and electronic theory
>to answer.

My almost undoing on the commercial exam was knowing the frequency tolerances allowed for the various services. Something you couldn't calculate - either you knew it or you didn't. But I passed. Another thing that would throw us nerds was the Commercial Element 1 - which was ten longhand essay questions on radio law where you had to spit out certain buzzwords and catch-phrases exactly, stuff like "What is the obligation of a mobile station to exchange communications?" the answer being "All stations are bound to exchange communications with other stations

regardless of the system employed" (an echo of the "Titanic" fiasco).
Use of a study guide such as Kaufman or Shrader was a necessity.

"Those were the days"

Sure...just as they waived the sending tests.

>1) Has the Senate ever NOT ratified changes to the ITU treaty, particularly
>with respect to the ARS?
>
>2) How long does ratification typically take?

Usually it's tacked on to some other bill and sails through like
salt through a tin horn.

The glaring exception was ratification of the 1979 treaty which was
held up by the then Senator John Glenn (to whom the Senate looked to
on things technical) because of a pizza contest he was having with
some Federal agency over some political aspect of US communications
policy (probably about who was going to tell whom what to spend).

I lost all respect for him from that time on and was appalled at the
foot-kissing that NASA and the American public did when he and Jake
Garm became the first American space junketeers (sorry, Tony Tito).

I think that's the point of it, arguing that Mr. Hollingsworth circumvented the FCC's own procedure. (...not "following the book.") Phil, no offense, but do you think Riley Hollingsworth or the FCC ever do anything wrong? Personally, I have no doubt of it...but I think it would cost Joe Blow a small fortune to prove it. Therin lies the frightening aspect of an "administrative" court. Take it easy and thanks for all the good information.

Although I'm no big Howard Stern fan, I do appreciate the approach they took toward the FCC. They paid the fines and just considered it like a shakedown...the cost of doing business. No doubt, it's dinner time re. this guy's ticket. What would it take to get an amateur case into a real court of law, one with a judge who doesn't work for the FCC AND a jury of one's peers? Oh yeah, one where the onus is on the FCC to prove your guilt rather than you having to prove your innocence, can this occur?

Because the test is supposed to cover topics that are directly involved in amateur radio. CW is such a big part of amateur radio that its inclusion is needed. How much inclusion is a different issue.

>English is probably
>the most popular language used in amateur radio, yet I am unaware of any
>administration that includes an English grammar test in any of their amateur
>examinations.

The tests are effectively tests of ability to understand the language in which they are given. Does Canada give ARS tests in languages other than English and French?

I don't think the FCC gives non-English ARS exams - if a person doesn't know English well enough to understand the tests, they are effectively barred from getting a US ham license
>
>Even if popularity were a consideration, it fails on the fundamental

Bingo - some verbiage like "pending full ratification of the changes, the test
for Element 1 is temporarily waived". Then some explanation referring to the
R&O paragraphs that talked about how the code test served no regulatory purpose
except treaty compliance. No NPRM, just a simple order.

Game over. Thank you for playing.

What Riley is doing is offering the guy a choice: modify the guy's license temporarily, or go through the whole formal enforcement process. The enforcement process could easily result in revocation. I'm no lawyer but that sure looks like a plea bargain to me.

It must always be remembered that a ham radio license is a PRIVILEGE that is granted under certain conditions. The most important condition is that the licensee agrees to play by the rules - all of the rules.

>Next thing you know, Riley gets a letter from
>this guy's attorney claiming that Riley's overstepped his authority and the

Sorry Jim, you're quite correct. In the absence of the option of "going to trial," (in the conventional sense, jury, etc...) it just appears to take on a more "threatening" posture than that of a "bargain."

>It must always be remembered that a ham radio license is a PRIVILEGE that is
>granted under certain conditions.

I agree, this is absolutely correct. Thanks for reminding me.

>The most important condition is that the
>licensee agrees to play by the rules - all of the rules.
>

Funny you should bring this up. I've always believed that an "authority" should lead first by example, don't you? Jim, are you familiar with the Tucker family club callsigns case? Mr. Tucker followed the "letter of the law" in obtaining all those calls. Riley Hollingsworth then determined that this violated the "spirit" of the rule and stripped the Tuckers of some of the calls. If Tucker found a "loophole," shouldn't Riley have to follow "all of the rules" in order to remove said loophole rather than enforce "on the fly," and circumvent the rule making protocol?

after all, You and I can't put up a stop sign on the corner of our block without going through the proper procedure, correct? Just because there's a new school and many kids cross there Driving's a privilige too, and the "spirit" of the safety to pedestrians is a righteous one, but we still must follow the rules to change a rule/law. Just a thought. I'm not disagreeing with you, I'm just offering a slightly different point of view.

>I wanna see a video of when this guy's attorney tells an administrative law
>judge that the administrative court is not a "real" court.

Somehow, I would think an attorney would not speak with the same candor in a courtroom (administrative included) as we might on a USENET newsgroup. ;-) However, in the eyes of many folks, without a jury of their peers...the word "kangaroo" quickly comes to mind. In the legal sense...it's certainly real though.

>You mean the guy whose license is modified, right?
>

Correct.

>The thing that really bothers me about all this is that the ARS looks bad
>because hams like the violator obviously don't even understand the conditions
>under which our licenses are granted.

You are quite correct in your statement. I'd just like to point out that you've already referred to this ham as the "violator." I sincerely doubt that if you or a loved one ever had to go to court to defend against an allegation, (a "real" one) you'd want to be referred to as the "violator." How about the "defendent?" You see how easy it is to disregard procedures that people died for, as long as we agree with the outcome? I think Riley Hollingsworth and the FCC do a great job. That does NOT preclude me from disagreeing with an enforcement action, tactic, or policy, if I truly feel said action/tactic/policy is at fault. I hope you understand that my views should not be misconstrued as condoning ant FCC rule violations. Thanks for the comments. Take care and 73.

I don't agree. There is all plenty of opportunity to abbreviate.
Note the following typical Field Day exchanges; first in voice, and
then in Morse. Even in contesting, Morse exchanges can be made more
terse than exact equivalent voice exchanges, but are at a "throughput
disadvantage".

Voice

(W0EF) CQ Field Day, this is Whiskey Zero Echo Foxtrot
(W1RFI) Double You One Are Eff Eye
(W0EF) Whiskey One Romeo Foxtrot India Copy Two Alfa Minnesota - Over
(W1RFI) Thanks. Please copy One Delta (***static crash***)
(W0EF) Say again Section - Over
(W1RFI) Connecticutt - Charlie Tango - Over
(W0EF) Roger - Thanks - CQ Field Day, this is Whiskey Zero Echo Foxtrot

---
Morse

(W0EF) CQ FD DE W0EF
(W1RFI) W1RFI
(W0EF) W1RFI 2B MN K
(W1RFI) TU 1D (***static crash***)
(W0EF) SEC? K
(W1RFI) CT CT K
(W0EF) R TU - CQ FD DE W0EF

With all kind wishes,

de Hans, K0HB

>again to call for help, there is no way I'm going to get it.

Pinko:

What I'd like to know is -- what's the big problem with giving your
call sign the first time you key the mic -- regardless of the reason?
It doesn't cost anything, keeps you "legal" for an entire ten minutes,
and gives the bad 'ole repeater cop no reason to shut down the
machine on you -- unless he just does it as a conditioned response
in order to gain some wierd form of gratification. I'm a repeater
control operator, and haven't issued a command on our club's
repeater UHF control link in over a month, when I turned the PL on
due to ducting. BTW, the reason you don't hear the control op's
ID is because he's probably using a UHF link to the controller.
I ID all my transmissions -- why don't you?

Steve:

My prediction: The FCC will drop Elment 1 like a hot potato before the ink is dry on the document eliminating S25.5. One less regulatory nightmare for them. I'm sure Bill and the rest of the NCI members have their petitions already written, finalized, and ready to be mailed; but they may as well save the postage. Code testing is a dead duck. At the present 5 WPM level, it is already virtually nonexistant. The FCC will fire the coup d'gras into the corpse's head as soon as the smoke clears from the ITU firing squad's volley.

>Would you really "not shoot him under any circumstances"?

Comrade Cecil:

Hmmm, good point. In the case of a knife, then, yes, I would use
my gun to stop an imminent attack. In the case of a baseball bat,
9-iron, rolling pin, or any other blunt-force implement, I'd shoot only
if an attack on a third party was actually in progress. Any cop
should be able to safely disarm a person wielding such a weapon;
at the very least, the nature of such a weapon would not justify
the use of a firearm unless actual physical violence of a life-
threatening nature were in progress.

>it and the hams who don't choose CW should be free not to use
>it. How is it that you dislike governmental control of guns
>and like governmental control of amateur modes?

Cecil:

I'm glad you akxed. First of all, I am not totally against *all* forms of
gun control. I don't believe that convicted felons should have access
to firearms, I don't believe minors should be able to purchase or own
firearms. I think that an absolute, federally-mandated minimum age
for ever having physical contact with an actual powder-burning
firearm should be set at 14 years. I don't believe that members of
the general public have any need for fully-automatic weapons of any
sort, and I don't think that a criminal background check prior to the
purchase of a handgun is a bad idea. I think that there should be
universal "Shall Issue" concealed-carry weapon licensing in all
50 states, with any law-abiding citizen being able to qualify for such
a license without any need to "justify" it based on need other than
his/her own self-defense. I believe that CCW license holders should
be able to carry their properly licensed and concealed weapons into
post offices, banks, hospitals, or any other state or federally owned
property, in order for the concept to have maximum deterrent effect.
Other than that, we have more than enough gun laws; those already
in effect should either be enforced or repealed. We don't need any
more.

There are certain areas in which the government has a very reasonable
right to regulate the actions of it's citizens for the common good. When
dealing with a finite resource such as the Radio Frequency spectrum,
the need is both obvious and imperative. If hams are no longer
required to learn the Morse Code at a useful proficiency level, most
hams will no longer do so. It's as simple as that. The numerous
benefits and advantages of this mode then become lost to the whole
of the ARS. I've explained this to you many times, Cecil. What part
of it don't you understand -- or is it that you simply reject it because it

doesn't fit your NCTA agenda?

>73 de Jim, N2EY

Jim:

That's the one. The local Honda dealer, which touts "no haggle, no hassle" pricing, puts a multi-thousand dollar "bump" sticker on each Odyssey, listing the usual high-profit, virtually zero dealer-cost add-ons like the "protection package," pinstripes, floor mats, and an "adjusted market value" surcharge. Yet, the things seemingly fly over the curb! Try to find one on a used-car lot, and it was probably repossessed because the buyer couldn't deal with a $600/month payment!

Do you really believe that Morse code has such little merit that people will not learn it unless forced to do so? You clearly do not think the mode to be very useful. Or are you just willing to say that to "win" this debate?

Then why don't you stop trying to convince people that the mode has little merit in a futile attempt to save the test and switch over to a mode where you extoll the virtues of the mode so that people will think it worth learning for its own good uses.

Does anybody know if there is any communication net setup to deal with the terrorist attack this morning?

Here in Detroit the tunnel under the river, and the Bluewater bridge over the river, both connecting to Windsor Canada is now closed down. So is Detroit Metro airport. The only tall building we have is the Renascence Center, which has been closed as well.

Ed:

That's a good point. I believe that such a requirement is reasonable and logical.

>Are you SURE you don't want to see CW testing just to keep your favorite mode
>alive with affirmative action?

I want to see the Morse/CW kept alive in order for radio amateurs to be able exploit the benefits and advantages of that mode. I have no other motivation. I understand that people who "love" the mode, as you say, will always have it at their disposal. I want those who may not yet have discovered that they "love" this mode to be exposed to it enough to give them a chance to do so, or to at least overcome their "hate" for this mode, as I did over 20 years ago.

3815. Sept. 11, 2001 - Terrorism Against The USA

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-11 15:40:16 UTC
From: yodoc@aol.comnospam
Message-ID: <20010911114016.00667.00000535@nso-mq.aol.com>
Source record: 20058

First impressions of an unimaginable tragedy:

Today, Sept. 11, 2001, the United States suffered massive, coordinated terrorist attacks against the World Trade Center in New York City and the Pentagon building in Washington, D.C. Apparently the South Tower of the World Trade Center has completely collapsed. As of this time (10:14 AM EDT) there are no reports of casualties, but loss of life in New York must be massive. The WTC was struck by two large commercial jet airliners, obviously hi-jacked shortly upon take-off; one is reported to have debarted from Boston. All civil commercial airports across the country are closed at this time. On WCBS TV, a camera shot of lower
Manhattan shows the skyline to be completely obliterated by smoke and dust from the WTC. Reports now are that the second tower of the WTC has now collapsed; casualties could be in the multiple tens of thousands.

I am sitting here, glued to my television set, barely able to comprehend the extent of this tragedy. I have no words to express my feelings, other than shock, and my deepest concern and sympathy for the innocent victims of this heinous attack.

One thing I know for sure -- we now live in an entirely different world than we did yesterday.

The World Trade Center must be rebuilt in the memory of all who lost their lives today.

God Bless America!

Unhuh. Then they say "what do those old farts know?"

> They will also hear you say that if Morse code isn't included in the tests,
> they will not use it.

SUbtle but inaccurate quote, as you so often do when you wish to alter
soneone's viewpoint to fit your own Agenda. What I said is that few will
bother to learn it, thus it dissolves as a viable communications mode
within the ARS, much to the delight of codehaters like Karl Stevenson
and Billy Sohl.

I wasn't aware that the digital modes needed any testimonial. It is
novel that you feel they do. But if you think they're bulletproof that
proves your naivette, digital engineeer or not.

Tim,

Thanks for the info. I just got word that the bridge is open but everybody is being checked VERY carefully. I typed the bridge name wrong in the last post, it should have been the Ambassador Bridge. Most of the auto companies have shut down here as well. The one thing that has been done is the entire Dearborn school system has been shut down. Dearborn is an eastern suburb of Detroit, and is the home to the world's largest Arab population, about 250,000, outside of the middle east. The people there are very much afraid of reprisal attacks against innocent people. I can't blame them one bit right now.

Not to fear for me, Dick. So far, there have been no problems here. My sister, a nurse, just left for work, though. One of her coworkers has family who work in the WTC, so she called in. When my sister called in, she learned they were shorthanded, so we aren't going fishing today.

What is yet TBD is what has happened to flight 175, bound from Boston to LAX. It is reported "down" on the news, but so far, not where. If it crashed near LAX, I may not see Bev for a few days. In the overall picture of what is happening today, that doesn't even make the minor sympathy list.

Okay, but keep in mind that many feel it is certain that the FCC will
ultimately drop all code testing. Please make sure that the things you say
today would serve to help people understand why the mode is important to learn
if there were no testing.

If there were no code testing, what would you say to hams to "expose them to
the mode" enough to make them want to learn it? Those are the words you should
be using today. Otherwise, you are driving at least one of the nails in the
coffin.

I am here in Northern Virginia near DC and heard ARES or RACES for Maryland activated on one repeater. I also received two messages from Virginia ARES/RACES so I do believe that some kind of thing has been setup. The email also detailed a 40m HF freq which I don't have by me right now.

I live in Fairfax county and the county PD channels that I can still listen to went over to digital so I would imagine that any non-ham communications will be digital/encrypted.

Just my 2 cents.....

If that is true seems to me it comes under the head of free will
and freedom of choice of modes which is exactly as it should be
within a hobby in a free country. After all, their minds do NOT
belong to you. Do with your mind what you choose to do with it
and allow everyone else that same right.

The reason for not allowing guns in hospitals is to prevent mercy
killings.

> If hams are no longer

> hams will no longer do so.

Most hams are incapable of Morse code at a useful proficiency level
now, Larry. If the feds were serious about Morse code skill, there
would be retesting and CW transceivers required. The hams who like
CW are the ones who use it. That will not change after Morse code
testing is dropped. In fact, I believe that more hams will be
interested in Morse code when it is not shoved down their throats.
Try honey instead of vinegar and see what happens.

Do you have the same attitudes toward sex, Larry? Why can't Morse code,
like sex, be a free will personal choice? Do you think people will enjoy
sex more after being forced the first time?

Leland all our cell phone communications in that area were knocked out I am told the antenna were on the trade center. that was my first indication of trouble. The NJ State Police uses what they call SPEN (state police emergency network) which ties them in with all local law enforcement who participate. I will see what is available.

Allowing radio amateurs to run the ARS would be like allowing
the inmates to run the asylum. The government has to protect
the inalienable rights of the newcomers from hams like you.
Your choice for them would be to learn Morse code or drink
Hemlock.

3840. Re: Sept. 11, 2001 - Terrorism Against The USA

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-11 18:15:05 UTC
From: GG <nbcblue@mailcity.com>
Message-ID: <3B9E4651.8075C8B8@mailcity.com>
Source record: 20084

Often there are other anti-american, anti-government groups who take advantage of something like this to perform copy-cat terrorist acts. One anti-government group is the two stations that call themselves Radio Free Texas. They operate on lower sideband on the bottom end of 40 meters, just a kHz or two inside the band. I would suggest that hams monitor the bottom end of 40 meters and record and report any suspicious transmissions to the FCC. They would really be pretty dumb to say anything on the air that might cause suspicion, but having listened to these two guys their not too bright. They are usually one from approx 7 to 10 pm cst. Usually on the hour. It is time to stop the terrorisum.

SB SPCL @ ARL $ARLX009
ARLX009 FCC, federal agencies shut down after terrorist attacks

ZCZC AX09
QST de W1AW
Special Bulletin 9 ARLX009
>From ARRL Headquarters
Newington CT September 11, 2001
To all radio amateurs

SB SPCL ARL ARLX009
ARLX009 FCC, federal agencies shut down after terrorist attacks

Kenneth Goetz,
N2SQW, reports New York State RACES is operational on 3.993.5 and
7.248 MHz handling emergency and governmental-type traffic. He asked
amateurs to avoid these frequencies.
While no emergency nets are in operation yet,
Gregory said all repeaters would be available as well as 7.243 MHz
and 3.947 MHz on HF.
Should a state of war be declared, Amateur Radio would not
automatically be shut down. This requirement was eliminated prior to
the Gulf War.

Special Bulletin 9 ARLX009
From ARRL Headquarters
Newington CT September 11, 2001
To all radio amateurs

SB SPCL ARL ARLX009
ARLX009 FCC, federal agencies shut down after terrorist attacks

Along with most other federal agencies, the FCC has closed its offices and sent its employees home in the wake of apparent terrorist attacks this morning in New York City, Washington, DC, and elsewhere. The FCC has issued no emergency declaration nor other special instructions to the Amateur Radio community. The ARRL has advised amateurs to stay alert to instructions from local authorities. President George W. Bush has announced that the US military is on high alert in the US and abroad.

US air traffic was shut down after two airliners struck the twin towers of the 110-story World Trade Center in New York City this morning within a short time of each other. The building's towers partially collapsed in the wake of the collisions. An aircraft subsequently crashed into the Pentagon, and another aircraft crashed near Pittsburgh, reportedly after being hijacked. American Airlines and United Airlines both have acknowledged that they have lost planes this morning. More than 260 died in the crashes. Thousands were believed injured in New York City; there's no estimate on the number killed.

New York City-Long Island Section Emergency Coordinator Tom Carrubba, KA2D, said there has been no request for any Amateur Radio Emergency Service response at this time, although hams have been requested to assist the American Red Cross. New York City's emergency management offices are located in the World Trade Center. He said he was alerting all amateurs, especially ARES and Radio Amateur Civil Emergency Service personnel, to get prepared and to stand by. Carrubba said he's in the process of setting up a command channel on a linked repeater system that will cover the area from New York City into Long Island's Suffolk County. Kenneth Goetz, N2SQW, reports New York State RACES is operational on 3.993.5 and 7.248 MHz handling emergency and governmental-type traffic. He asked amateurs to avoid these frequencies.

In the Washington, DC, area, Virginia SEC Tom Gregory, N4NW, says Virginia ARES has been put on alert but has not yet been activated. ''I've asked everyone to monitor the emergency frequencies and to

keep a full tank of gas.'' He said the attack on Washington has resulted in a massive traffic jam as workers in DC attempt to leave the capital; cellular telephone communication was next-to-impossible. While no emergency nets are in operation yet, Gregory said all repeaters would be available as well as 7.243 MHz and 3.947 MHz on HF.

Virginia RACES reportedly has been activated at the state emergency operations center at Virginia State Police headquarters in Richmond as a precautionary measure.

The FCC's Riley Hollingsworth today suggested that the amateur community remain calm but ready. He invited amateurs monitoring any suspicious radio activity to contact him, and he will relay relevant information to the FCC duty team. He advised monitors to tape such radio traffic, if possible.

Should a state of war be declared, Amateur Radio would not automatically be shut down. This requirement was eliminated prior to the Gulf War.

Did it say a state of war has been declared? Try and read it again, it says "should a state of war be declared". If this act can be definitely connected with another government entity, there very well may be a state of war declared.

With any luck, that number could be a fair bit lower. It sounds like
the attacks occurred a little earlier than many people arrive for
work, and of those who were there, a good number got out.

It is a reality that a state of war could possibly be declared. What part of that do you not understand?

Who does Sharon bust so admiringly, whenever Joie infects the
flat telephone very inadvertently? Other worthwhile
erect thoughts will manage sadly beneath sattelite phones. The
bizarre BASIC rarely saves William, it moans Guglielmo instead. Who
interfaces incredibly, when David proliferates the
ignorant data haven under the watcher? I was deleting
MPEGs to idle Edwin, who's recycling throughout the
ActiveX's frame relay. For Roger disc's filthy, with me it's
bright, whereas throughout you it's flowing old. One more
shiny sly function tolerates postmasters under Edna's
odd rumour. Get your weekly contradicting president
outside my FBI. It's very outer today, I'll crawl
steadily or Liz will facilitate the condors. A lot of
desktops firmly produce the minor /dev/null. My strange
email won't substantiate before I learn it. Joe, still
starting, disconnects almost virtually, as the workstation
vends around their output. It outwited, you defiled, yet
Anastasia never usably distributed to the email. Orin's
blackbird engulfs with our JPEG after we kick beneath it. Are you
important, I mean, preserving throughout tall newbies?
Nowadays, it propagates a FORTRAN too idiotic around her
cosmetic website. Try not to inflate compleatly while you're
restoring on a vulnerable secure shell. One more hard
clients burst Elisabeth, and they annually corrupt
Frederick too. They are generating against the complaint desk now, won't
confront texts later. If you'll collaborate Blanche's
market with Pascals, it'll seemingly negotiate the
ethernet. Hey Gavin will close the toffee, and if
Madeleine bimonthly smiles it too, the protocol will
post throughout the cold field. These days, go twist a
LAN! Why doesn't Ricky train cruelly? Who will you
kill the loud quiet Javas before Beryl does? Jon jumps once,
spools globally, then disrupts without the advisor
over the house. She'd rather interface hatefully than
eliminate with Eliza's insecure operator.

The main HF frequency is on 20M at 14.300 MHz. There is some Red Cross traffic up the band a bit. Also there is supposed to be RACES on 80M at 3993.5 KHz, and on 40M at 7248 KHz per a ARRL news bulletin sent by E-mail. I have monitored those two frequencies, but I don't hear any activity.

Watch yourself! The last I heard over 200 fire, police etc. personnel are missing when the two towers collapsed. I would hate for you to end up that way.

I hope Bush has been reviewing those nuke release codes. I think the time has come to show some dirty buggers what "Terrorism" really is when there is no place to hide from our bomb. Enough is enough, press that big red button and lets see if it really works!

People think it's that rich Arab terrorist. I don't think it is. My money is on Iraq. They have access to trained pilots, both military and civilian, who could have flown those jets easy. Given their past ability to get material for their military programs secretly, planing the kind of attack we saw today would not be beyond them.

Iraq also has a bone to pick with Bush, the older one, over the Gulf War. That would explain the attack on the Pentagon, and the apparent attempt to crash a jet on Camp David. That would please the Iraqi leadership to no end if they could kill the son, now our current president, of the former US president whose military still occupies Iraqi soil and beat the crap out of the Iraqi army.

I know some of those people that are missing too :/ As I said in a post on
another thread, our Red Cross chapter is now manned 24 hours a day handeling
emergency message traffic for Family Welfare Inquirey, and Armed Forces
Emergency Services, we are also hosting emergency blood drives to augment
the blood supplies needed for this tragic situation. I encourage all of you
in the US, to support the local blood drives, the people who were injured,
many have serious injuries that will require many operations.

To those of you who are in the military, have been in the military, or have relatives in the military, my hats off to you. Again as I said in another thread, my cousin is a US Navy Seal who is part of the Counter Terrorist team. I know he is already involved in this one way or another, Troy, I salute you, kick ass cuz.

The main HF frequency is on 20M at 14.300 MHz. There is some Red Cross
traffic up the band a bit. Also there is supposed to be RACES on 80M at
3993.5 KHz, and on 40M at 7248 KHz per a ARRL news bulletin sent by E-mail.
I have monitored those two frequencies, but I don't hear any activity.

You guys are incredible. You can't seem to keep from lying, by your definitions. YOU are who says that CW doesn't have enough merit to survive without code testing. WE say that most hams won't bother with learning it if it isn't a requirement. And we try to show that it is a valid and useful mode worth keeping. All the while you trivialize it into a status that would attract no one to learning it, as just a "fun novelty".
How so very disingenious of you and Ed.

No Ed, that's not what either Larry or I have said, not even close,
though you and Cecil keep parroting that invalid line.

You clearly do not think the mode to be
> very useful.

Exactly 180 degrees out of phase, Larry and I are doing our best to
point out that it IS a very useful mode, but ***ONLY IF HAMS LEARN TO
USE IT***!!! Otherwise, it is virtually useless to ask "questions about
it" on any exam.

Your milquetoast approach of coddling them into an "understanding" that
it is well, a "fun" thing to do, not really of any use, but novel, like
horseback riding is clearly accomplishing what you accuse us of doing.

> Or are you just willing to say that to "win" this debate?

Are you acting as the ARRL Minister of Propaganda, by any chance?

BOG you really are an idiot. In the states the amateur community is often heavily involved in the provision of communications support in the event of civil emergencies - and I would have to say that this terrorist attack just might possibly come under that heading. Stop making stupid comments and piss off back to your horse rooting.

Idiotic! It is more than clear from the experience of the past years
that very few prospective hams kow anything whatever about CW, and only
learned it minimally, enough to get the license. In so doing some find
they like it enough to gain skill. When no test is necessary, none will
learn it in advance of licensing, and only a very small number will ever
devote the time and effort to learn it. Do you so easily forget tall the
moaning and whining about "I hust don't have the time..." which actually
means "I just don't have the interest...." So what makes you think they
will suddenly have a change of heart? Just because it is no longer a
requirement? Yeah, Right!!!

Watch yourself! The last I heard over 200 fire, police etc. personnel are missing when the two towers collapsed. I would hate for you to end up that way.

I hope Bush has been reviewing those nuke release codes. I think the time has come to show some dirty buggers what "Terrorism" really is when there is no place to hide from our bomb. Enough is enough, press that big red button and lets see if it really works!

People think it's that rich Arab terrorist. I don't think it is. My money is on Iraq. They have access to trained pilots, both military and civilian, who could have flown those jets easy. Given their past ability to get material for their military programs secretly, planing the kind of attack we saw today would not be beyond them.

Iraq also has a bone to pick with Bush, the older one, over the Gulf War. That would explain the attack on the Pentagon, and the apparent attempt to crash a jet on Camp David. That would please the Iraqi leadership to no end if they could kill the son, now our current president, of the former US president whose military still occupies Iraqi soil and beat the crap out of the Iraqi army.

>of any amateur radio operating license, nor do I believe that is
>justification for a "mandate" that all in emergency communications should
>know (note the use of the word 'should') CW.

Kim:

Obviously you would not see code testing requirements as justified, since
you object to having to make the effort required to learn and attain
useful proficiency in the Morse/CW mode. If any other mode required a
similar learning experience, you would object to requirements to know it as
well. The code/no-code debate is about the laziness of the NCTA, and
you represent this as well as any other NCTA in this newsgroup.

>I think that the heavy emphasis on CW as this magical, mystical emergency
>communications mode causes a great deal of confusion.

Perhaps, but only to those on the NCTA, who object to it because of the
effort required to learn it. For everyone else, there is no "magic" or
"mystery" involved. The robust characteristics of the Morse/CW mode are
well known, long proven, and absolutely understood by those who have
gained useful proficiency and experience with this mode.

>I can't help but
>wonder why someone who loves the mode has no argument for its inclusion in
>testing other than that it will benefit emergency communication
>[paraphrased].

Actually, it (Morse/CW) benefits *all* types of radio communication, whether
there is an emergency or not. However, it is because amateur radio
operators have a charter to be prepared for and participate in providing
backup emergency communications services that we must emphasize the
benefits and advantages of the Morse/CW mode in this context. I, for one,
happen to believe that *all* modes have their place in emergency
communications, and my first choices in an emergency situation would
be to utilize high-speed digital modes or voice, simply because they
permit the passage of traffic at higher speeds under normal operating
conditions.

As a ham with 20 years of on-the-air experience, I have had many
situations occur when voice and digital modes failed to allow me to
continue a QSO, but was able to take up where I left off using CW.
However, I was only able to do this when the person I was in QSO with
was also a proficient CW operator. There's the rub when it comes to
CW -- you can't use it if you don't know it, or the person you're in

communication with doesn't know it. Under an emergency situation,
your voice or data link may fail, but you are very likely to be able to
continue to communicate using CW. However, if you or the guy on
the other end don't possess this skill, this option is off the table. It
is for this reason that I support the continuation of code testing
as a requirement for higher amateur privileges, and the restoration
of 13- and 20-WPM code testing for the General and Extra class
licenses.

>*IF* passion for emergency communication for the benefit of
>public safety is the motivation, then why not support and realize that no
>one mode should be advocated--*all* modes available should be advocated?

Those of us on the PCTA are not actively opposed to *any* mode of
operation. We simply understand the value of the Morse/CW mode, and
know that code testing is what makes radio amateurs learn this skill
at a useful proficiency level.

>The argument that CW "will get through" when no other mode will just doesn't
>fly any more. There are so many other modes available, some even with
>video.

The *fact* that CW "will get through" when no other mode will is a simple,
proven, documented FACT. Again, no one is advocating the abolition
of other modes, or denying the fact that advanced digital modes have their
rightful place as primary modes to utilize under conditions when they can
adequately support the communications desired. However, there are
numerous situations where Morse/CW is simply the best choice; such
as when maximum conversation of electrical power is necessary, or when
propagation conditions render other modes inoperable. We can't use
PACTOR unless we know how to do so, have the equipment to support
the mode, and the guy at the other end cooperates by doing the same.
Same with CW -- but CW requires that the individual ham possess a
physical skill in order to utilize it. Acquisition of this skill requires a
great deal of motivation and dedicated effort on the part of the prospective
CW user, and therefore, the code testing requirement, with higher
operating privileges as the incentive for increasing skill in this mode,
make sense. The fact that you don't see this is only a reflection of your
self-serving motive to not be subject to the requirement. This is the
underlying truth behind all of your standard NCTA objections, regardless
of how poorly you state them.

>That is my reticence to have CW be a part of the testing scheme: it proves
>no technical aptitude [if that is what we're testing for have the testee
>design, build and implement a packet station or some such]; CW proves
>nothing in the way of being a better communicator [if that's what we're
>testing for have the testee sit with an elmer and break through some
>pileups, send formal written traffic, and act as ANCS during a training
>net]; and CW knowledge has little to do with the overall hobby of ham radio
>[if that is what we are testing for have the testee know the history of ham
>radio].

All of these arguments have nothing to do with the code/no-code debate.
Technical knowledge and CW knowledge are tested separately, for a
reason; that reason being that they are, in fact, not related to each other and
deserve to be treated as separate issues. The PCTA does not deny this;
yet it is one of the most well worn, and weakest, arguments of the NCTA.

>On the other hand, if CW testing is supposed to be a filter to keep
>unmotivated individuals out of the hobby then keep it because it does work
>well for that.

The present Extra-class written test is having the same effect right now.
The "filters" being used are self-imposed upon those prospective hams
who don't wish to expend the effort required to gain useful knowledge
and communications skills.

>The attitudes of some people, concerning the restructuring
>step that decreased the focus from CW, is obvious testimony to that.

I would not argue that point; however, laziness is a very universal human
trait. It is those of us who are able to overcome it who deserve our
privileges; everyone else is consigned to waiting until their whining
finally pays off in a further dumbing-down of licensing requirements.

Cecil:

A properly licensed CCW holder will not jeopardize his license by committing a mercy killing. In any event, at least in my own local hospital, a gun could easily be brought in for that (or any other) purpose. Emergency rooms usually don't have metal detectors at the doors, and I can walk from the ER entrance to any other part of the hospital without being challenged by anyone.

A few Technician friends of mine in the local area have always claimed that; and now that the Morse Code is not being "shoved down their throats" at a speed higher than 5 WPM, they have still shown no interest in learning it in order to gain full HF privileges. Whether one uses honey or vinegar doesn't apply to the code/no-code debate, since it is the effort required to open the bottle which is at issue.

George:

Yep -- got the ruler over the knuckles many times, in addition to
the long, wooden pointer with the black tip over the head! Then
one nun, Sister John Marie, (forgot the order), used to like to use
the knuckle of her index finger to poke (hard) into your temples --
very painful. My experiences in Catholic school from 1957 to
1966 would today result in all the teachers being jailed and a
multi-million dollar lawsuit against the school district. They have
also affected my life in such a way as I can now directly
attribute any lack of success to the mistreatment I received at
the hands of so-called "religious" people. You see, I was singled
out for particularly heinous treatment, since I was the oldest
son of one of the few lawyers in town, and the only one in the
parish at the time. Because my father was rich, successful, and
a powerful influence in the community, I was singled out for
retribution by petty, jealous people who were singularly unqualified
for teaching, except for the fact that they were Catholic. I would
like to say that this is now water under the bridge, but the
emotional scars of the degradation I suffered at the hands of my
elementary-school teachers have never healed, and have had
a lifelong effect.

> How so very disingenious of you and Ed.

Dick:

You've got to keep in mind that Ed and the NCTA have to pander
to the wishes of the lowest common denominator. This is Political
Correctness in action. In Ed's case, it is necessary to avoid
offending potential hams who may choose to become ARRL members.
The ARRL has decided to walk the low road when it comes to
amateur licensing requirements. The truth is, if they had gone
the other way, they'd probably experience more growth in their
numbers than by having taken their current course. Meanwhile,
Ed has to keep on mocking us PCTA's with his supercilious,
arrogant replies to our well-reasoned arguments. In so doing, he
displays a true side of his character which we never suspected
before, and engenders no sympathy in return. The net effect is
to reinforce an already widely-held opinion of ARRL HQ staffers
as being generally disdainful of the rank-and-file membership, and
pursuing the courses of action which they think best serve to
keep themselves in the position of making a living at their hobby.
I'm about ready to send him two lobsters via FedEx, to pay off my
debt to him, and make him the first and only person I filter out of this
newsgroup. The only problem with that is that he is such a classic
example of ARRL HQ arrogance, he's actually quite amusing to read!

>Although I'm no big Howard Stern fan, I do appreciate the approach they took
>toward the FCC. They paid the fines and just considered it like a
>shakedown...the cost of doing business.

Until it happens two or three times and then it's license jerk
time. If it's really bad, the FCC goes into Federal District Court
after the first time and gets an injunction - an order from the
court forbidding the defendant to violate the rules/statute.
Failure to comply with an injunction is one of the few things that
really disses a judge, who can then jail the defendant.

>What would it take to get an amateur case into a real court of
>law, one with a judge who doesn't work for the FCC AND a jury of one's peers?

The Congress specified the path for administrative compliance. The
first Federal court that a licensee would see would be the U S Court
of Appeals if s/he claims that a Commission finding/order handed
down by an ALJ or ubder delegated authority and reviewed and
confirmed by the Commission would cause harm to said licensee.

The Federal Rules of Civil and Criminal Procedure allow a jury trial
only in criminal cases or where the value of damages in a civil case
is over a certain minimal amount. This is is total compliance with
the Bill of Rights. One does not get a jury trial over an injunction,
a license dispute, or an interpretaion of FCC Rules.

>Oh yeah, one where the onus is on the FCC to prove your guilt rather than you
>having to prove your innocence, can this occur?

At all steps of a Commission adjudicative proceeding, the Bureau
bringing the case must state and prove a credible case and the
burden of proof and the burden of going forward is on the Bureau.

The book requires that the Commmission propose an action and offer
the licensee an opportunity to be heard on the proposal beforeit
becmes final (procedural due process).

Did he fail to do so?

>Phil, no offense, but do you think Riley Hollingsworth or the FCC ever
>do anything wrong?

Stupid? Quite often. Wrong? Not too often. It's so easy to
follow "the book".

>Therin lies the frightening aspect of an "administrative" court.

An admin hearing is only the first step, but it is in fact an
evidentiary proceeding where the gvb'mint has to make its case or
the respondant walks. Although ther ALJ apparently works for the
FCC, in real life most of them look very sharply to make sure that
the GCC has followed the book.

Stay well.

That wasn't limited to only Catholic schools.

When I was in the 5th grade in the New York City Public Schools (late 1940s), I remember being jerked out of my seat from behind by the teacher who then screamed at me "Alvin, I told you.....". Then she looked at my face, said "You're not Alvin" and dropped me back into my seat. (Alvin and I were wearing the same color shirt that day.)

Lest it appear that that teacher was an ogre, she was one of the best and most respected (by me) as I got older and learned to respect her as an adult, notwithstanding her futile attempts to get me to keep quiet in class by pasting a large label over my mouth.

I won the QLF contest at the Wheeling hamfest a few years back though
the non-dominant foot rule was also agreed to in my case since I'm a
natural lefty. I observed that all other entrants were seated and asked
if this was mandatory. When told that it was not, I opted for the
"stork" method--standing on my left foot while keying the four foot long
key with my right. I still have the prize TV in my shack.

The truth can no longer be accepted by ED.

3896. 10 Meter Intruders

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-12 13:40:38 UTC
From: yrac@aol.com
Message-ID: <20010912094038.06781.00000022@mb-bj.aol.com>
Source record: 20140

Some CB operators have moved into the frequencies which lie between the regular 40 channels and the 10 meter ham band. They refer to this as "freebanding". Often, you hear the effect of this as "splatter" into the lower portion of 10 Meters. Occasionally, you will hear one of these fellows attempt to "break in" on your QSO. Meanwhile, some trucking companies have adopted 28.085 as a "company channel". They use it as an intercom to get away from Channel 19. (See the FCC Enforcement Logs for details about how one trucker was by FCC).

In recent months, there has been a steady stream of letters pouring into the FCC offices from 10 Meter operators who want to be able to enjoy the band without interference from illegal stations.

If you are concerned about this, please become involved. Monitor and document illegal signals. If you locate the source, gather as much data as you can and forward it to Riley. Write to radio publications urging fellow amateurs to become supportive.

You either are a PLAYER or a VICTIM. In other words, you are helping direct matters, or you simply sit back and take whatever the players force upon you.

Don't roll over and play dead concerning 10 Meters! If you don't think the radio "terrorists" have their sights on taking over our band, stop by a CB radio shop and look at the frequency chart on the wall. The export radio manufacturers have designated "channels" every 10 KHz from 26MHZ all the way through the 10 Meter SSB band. And unlicensed people are buying these radios every day. If this doesn't get your attention, you should check your pulse!

Yrac

All you had to do was check the box on the form that you met those requirements whether you did or not. It did not prove anything.

Hey, lookit, everyone, telling the TRUTH is now called "pushing buttons!"

*I'm" simply pushing buttons, Ed? Right. Well, at least I should thank you for a classic example of the pot calling the kettle "black!" You've done more than your share of "button-pushing" here, which is what prompted my above quoted response. ARRL HQ personnel have treated me with arrogant disrespect from my very first contact with them. I arrive there eager, excited, enthusiastic, and curious -- and they treat me like something found under a rock, or, at best, as a terribly inconvenient waste of their valuable time! My first impressions were bad enough, but every subsequent experience I've had with ARRL HQ staffers since has been largely the same, with two notable exceptions: Rick Palm, and, when I first met him, a nice guy I used to know by the name of Ed Hare. I'm sure Rick has stayed the same, but then again, he doesn't participate in this newsgroup, where he must deal with people like Dick and myself, who speak the TRUTH about things like code testing.

My impression of the attitude of ARRL HQ staffers toward rank-and-file members is more widely-held than you suspect, I'm sure.

>There is absolutely no reason I should tolerate it, and
>I will no longer do so.

Whew! It's a damn good thing you didn't say that to Cecil, or he'd be claiming you just made a death threat!

>This post makes it perfectly clear that this forum is
>no longer a place for rational discussion.

Well, if that's the case, Ed, then don't let the door hit you in the ass on your way out! If you choose to stay, then you'll have to decide if you're going to be part of the problem, or part of the solution. Keep in mind, I'm not going to stop telling the TRUTH about code testing or the ARRL, no matter how much it upsets you to see it. So, if you can't take the heat, get out of the kitchen -- but watch out for that swinging door!

Not here in EPA. They charge the sticker price, because they can get
it. The options are often tossed in at dealer cost. The only bad thing
about the Odyssey is that buyers often have to wait for them.

> Yet, the things seemingly fly over the curb!

It's called the free market. Would you restrict the seller's right to
set the price at "what the market will bear"?

> Try to find one on a used-car lot, and it was probably repossessed
> because the buyer couldn't deal with a $600/month payment!

Compare the Odyssey to similarly-equipped Dodge Caravans (less safe)
and Ford Windstars (less reliable).

Actually it proved that you were willing to swear to a lie if you had
not.
No doubt it happened. Not everyone takes their affidavits seriously.

If I believed that your approach had any better chance of succeeding
than mine, I would support yours. But yours lacks information on CW
beyond how much fun some hams find it to be. If it has no communications
value and is only fun, then it is gone anyway, for how many of those new
hams have any idea of its communications attributes? Among those
postering here, virtually none do.

The IHM nuns were not teachers at all. They treated the kids like
prisoners. The idea that Catholic schools back then were better was
just propaganda. For example, I had one nun who never taught at all.
Just made the whole class read the textbook out loud.

> >Most of the stories about rulers in 50s and 60s Catholic schools are

That's nothing. SOM nuns - buncha weenies.

Typical IHM nun tactics:

- Verbal abuse that would make a DI look nice

- Grabbing the hair on the top of a kid's head and dribbling his head
against a slate blackboard

- Beating a kid with a 15 inch wooden ruler until the ruler broke.
Then making the kid go to a particular store, buy a replacement ruler
of the exact same type (with his own money) and bring it to school the
next day. Then the nun finished beating the kid with the replacement
ruler.

- Hauling a kid out of the desk by the ear or hair.

- Smacking a kid's open hand with a metal-edged ruler.

- Holding one side of a kid's face with the left hand so that the slapping administered with the right hand is more effective, then switching hands.

- Forcing a kid to roll up his pantlegs and kneel on gravel.

- Sneaking up behind a kid and whacking him on the back of the head with a heavy hardcover book, often knocking the kid's head into the wooden desktop. Hard.

There was one kid who developed a form of petit-mal epilepsy that caused him to stare off into space for about 15 seconds every so often. The nun would beat him over and about the head whenever she caught him having a seizure. The nun and the school would not accept the instructions of the parents and the kid's doctors that the seizures were involuntary and that the kid should not be punished for them. Nor would they accept the idea (from a neurologist) that beating anyone over and about the head is not a good idea.

The parents were so indoctrinated by "Holy Mother The Church" that it was pointless for the kids to report or protest - the kids would usually get another beating from the parents if they spoke up. In some cases the parents thought the kids must be lying, and in other cases they believed the nuns' claims that children need regular violent punishment to avoid turning into criminals.

Only boys were punished this way, though. (The term "kid" in this post refers to boys only). Girls were oppressed in other ways, mostly psychological.

And this was elementary school - grades 1-8. High school was actually much less physically abusive. Instead, the methods focused on psychological and emotional methods.

The results of all this were not what the nuns expected. Most of the kids stopped being Catholics ASAP. By the 3rd or 4th grade, no kid would rat out another kid - it was "us against them". Many kids developed distrust of all authority figures. Kids figured out ingenious methods of protest - one class of kids learned to whistle the "Colonel Bogey March" in unison, and would do so whenever marching in formation without the nun leading them.

Natural disasters often knock out telephones, cellphones, and
electricity. That's when amateur radio can still shine. Of course,
satellite-based cellphones could also solve that problem.

I totally agree with you glenn. 2 years ago we were even needed in a major forest fire for evacuees and locations. they could not use their cell phones or normal radios. due to the fact that everyone was evicted to 300 km or more away. a normal 2 meter repeater could reack farther then that onour hill tops. gee.

oh. why not get our 4x4's and try talking on 11 meters. hu huh. that would really help in a city like NY. Lots thinks hams are useless. but after a few disasters. NOT like the washington one. but the smallones here. We as hams were used. We are co ordinated and usually trained and done for free. emergency communications. we had people use their cell phones. and vhf radios. but. all that did was lost people that were sopposed to be on a list and location of the person. made families worried not knowing where their loved one was. jsut cause someone thought we were useless. and this was one of the people in PEP. my god. Most hams don't need credit or to even be on the news to help. Just knowing that you passed on a communication transmission that made another happy is all that really counts. I say most. but that is most of the hams I know. I don't care being plastered all over the news. I am more happy just knowing that I did a good deed to someone that may of thought they lost someone.

Go back into the sewers Dave. where you and other trolls live.

73 to all that know that our hobby still does matter some days. All depends on the disaster.

Nothing is that much different from how it has always been, Bill. Not
that many hams have ever found themselves in circumstances where they
need to handle emergency traffic, but readiness for it should be
expected of all of us.

A couple of questions for zz4@webtv.net AKA ww7a@yahoo.com.

#1, Why do you want to use someone else's identity for your email address?

#2, Just how did WW7A find out about you and your email address?

It sounds like there is more going on here than your telling us.

I have to agree with Bill here. The way things are today, a ham radio
operator showing up at a disaster site with HT in hand will probably
be handed a shovel and told to fill sandbags or get the hell out of the
way. Someone with a complete, power-independent, portable HF
station with all mode (including Digital and CW) capability will probably
be given some meaningful communicating to do, usually passing Health
and Welfare traffic or providing support communications for a Red Cross
or other shelter. However, for the most part, emergency communications
are carried out over professionally built, professionally maintained, and
taxpayer funded 800 MHz trunked radio systems using $4,000 Motorola
"bricks" that make our HT's look like toy walkie-talkies!

If you, by some coincidence, happened to choose a group of letters
and numbers which could be configured into an amateur radio station
call sign, then use it as an e-mail address, there is nothing that
particular radio amateur can do about it. What I would do, if I were
you, is try to find out how much it is worth to him!

Ya know, Dave's got a point, here...two days into the Attack on America,
and not a single story of an eager young ham saving the day with HT
in hand! I am, however, impressed that so much information was able
to be passed by cell phone inside aircraft in flight. I gotta get me one
of them things someday!

Well, I forgot, I do have one. It's an old "bag phone" that I keep in the
trunk of my car just to use on 911 or #77 for highway emergencies. It's
not "activated" for any other normal use, however.

I have the same attitudes towards Morse and sex:

- I enjoy both, particularly when the other people involved are skilled
- I think others should enjoy both
- I hope to stay active in both for many years to come
- I enjoy learning new things and improving my skills involving them

Many people, when they first encounter descriptions of either activity, wonder why anyone would want to do such things.

It takes most people a bit of time and effort to learn Morse, and to learn to enjoy it, though. The same is not true for sex.

The ham renewing the license signed the form, certifying that the information
was true and correct.

I don't know when the activity requirement ended, but my 1971 License Manual
shows that it was still needed in that year.

Oddly enough, activity was only needed to renew an operator license, not a
station license.

On the subject of emergency communications, Cecil...

Two days of continuous TV news broadcasts of the evil terrorist acts have shown that TV remotes can indeed operate during an emergency. Note: The WTC had eight major TV broadcast towers that were grounded on the collapse of the twin towers; CBS kept their old tower and transmitter on the Empire State building.

At least two survivors in the WTC rubble were calling for help on cellphones...from within the rubble. Cell phones were evident on everyone's TV screens and in use all over lower Manhattan.

At least seven (perhaps eight) victims IN the aircraft that crashed used cellphones to call out (NBC late Wednesday afternoon), their family members recalling their last words. Cellphones "did not go out" before or after the crashes.

I saw at least two different radio service HTs in use on Fox Cable news broadcasts of the scene. NY National Guard were shown along with at least one Humvee with a high-HF whip, although no sign of its radio being used. Military HTs were evident around the Pentagon along with cellphones used by both military and civilian personnel.

Given at least 40 hours of continuous news telecasting (to the time of this writing) there has been no daylight or early night coverage of amateur radio health and welfare operations by CBS, NBC, ABC, CNN, Fox, or MSNBC TV networks. It would be a boon to all the amateurs "emergency radio" proponents if some network could show that. It would be a good "human interest"

cutaway on day Two or day Three.

Seven years ago the Northridge Earthquake happened here, knocking out ALL primary power to about 10 million subscribers. Where was all the "emergency communications" by radio amateurs then? TV was on the spot then along with all the professionals. FEMA had their roll-away terminals for video health and welfare transmissions and that was shown on TV. No hams seen.

REAL emergency preparedness in amateur communications involves having emergency power available to operate...and integration with the authorities who ARE equipped, DO train for many eventualities, and CAN do their job. That example lesson seems lost on those who only want to throw out their chests in bragging but aren't prepared to show the world how good they are (or at least claim to be).

Agreed, this disaster was unlike Andrew. But the need during Andrew was for HF communication, not necessarily for amateur HF communication. Local authorities should have dedicated HF equipment available for just such emergencies. It's not that expensive and a minimum of training plus regular on the air tests would do the job.

This stuff should be left to the professionals. If a ham wants to become a professional, fine. Most of the ones on this newsgroup just want to be the radioman on the Titanic.

There's no logical implication there, Dick. It appears that what Ed
is predicting is what the FCC is going to do. There's no cause and
effect. Ed just seems to be good at predicting.

There's one thing that hasn't been mentioned yet in this thread: Sometimes CC&R's have "self-destruct" provisions.

The CC&R's for my neighborhood had two such provisions:
- They must be renewed periodically (the period is rather long - on the order of 25+ years), and
- There are certain property transfers (mortgage repossessions and inheritances which follow certain steps) which cause the CC&R's to become void with respect to a parcel in the property (and this is the one that I used to kill them off with).

So, even if you're told that a property has a set of CC&R's that goes with it, you need to check the property's history to see if they've been self-destructed or otherwise voided. Then, it doesn't matter.

I have my ham certification. I have not turned the darn boring
thing on since I bought my first computer in 1995. I come up for
renewal next year and dont even see reason to waste my time.
I just dont see the insistance on archaiac means of communication
such as morse code in an age when video, audio, and information
rich content is available at your fingertips. Erect a gigantic antenna
to talk half way around the world and then not even be guaranteed
success. Why bother. I can plug into a simple phone jack and go
anywhere I want. Its this insistance and refusal to "get on with it"
that will be the demise of ham radio. The communication spectrum
is dwindling and I forsee amateur radio being forced out in the future
to make room for newer technologies. Sure, amateur radio has been
responsible for a lot of what we take for granted nowadays - but, it
just isnt keeping up in the long run. The cell repeaters can be back
on the air just as fast as an amateur can erect a repeater system.
I would much rather have a cell phone with me under that pile of
rubble or on a hijacked plane than an amateur radio. I think I only
view amateur radio as a form of socializing anymore. It just isnt
anything to be proud of in this day and age. If hams ran the auto
industry we would all still be riding around on wooden spoke wheels
today. I just do not see any of our younger generations finding any
interest in amateur radio today. Perhaps, like an old horse dying of
old age, we should just shoot it and put it out of its misery.

For those who think ham radio has served no use during the current situation, this post is from qrz.com:

In the action

by 9y4raj (ab2mh@arrl.net) on Wednesday September 12, @11:14AM EDT

Hello all.

I just came from an extended shift as the "radio man" at an emergency shelter. Hams are truly coming out in their numbers and supporting us at NYC ARES/RACES and ARES/RACES in general. Net Control on 147.000 MHz last night was done by Adam Fine, AB2IZ, and today and yesterday during the day by Guy Richman, KC2AYG. There were many other hams, from New York metro, other areas in New York state, and tons of ham volunteers from out of New York State, from all over the US, many of them Red Cross volunteers.

Red cross headquarters was manned by John Kiernan, KE2UN among others. Charles Hargrove, N2NOV is on full duty from the makeshift OEM office. The original OEM (Office of Emergency Management of the City of New York) was housed at 7 world trade center and was destroyed in the explosion. It is truly a phenomenal sight to see, from Red Cross headquarters all the way down to southern Manhattan below 14th street. It truly embodies our ham spirit and shows that despite all the bickering, code vs. no code, regardless of race or creed or license class, we all banded together to help out in times of tragedy.

It makes me feel especially good as a ham, as a New Yorker and as a member of ARES.

73
AB2MH.

Bill, I WAS a professional Public Safety communicator for 2/3 of my 30 year career.

The Titanic has nothing to do with anything, and hasn't had for 90 years.

When the professionals lose their communications capabilities, hams can and do fill in, regularly. I'm surprised you're not better informed.

Dick W0EX

From an unknown writer at CBS New York

They pay me to provide words that help make sense of that which troubles the American soul. But in this moment of airless shock when hot tears sting disbelieving eyes, the only thing I can find to say, the only words that seem to fit, must be addressed to the unknown author of this suffering.

You monster. You beast. You unspeakable bastard.
What lesson did you hope to teach us by your coward's attack on our World Trade Center, our Pentagon, us? What was it you hoped we would learn? Whatever it was, please know that you failed.
Did you want us to respect your cause? You just damned your cause.
Did you want to make us fear? You just steeled our resolve.
Did you want to tear us apart? You just brought us together.
Let me tell you about my people. We are a vast and quarrelsome family, a family rent by racial, social, political and class division, but a family nonetheless. We're frivolous, yes, capable of expending tremendous emotional energy on pop cultural minutiae -- a singer's revealing dress, a ball team's misfortune, a cartoon mouse. We're wealthy, too, spoiled by the ready availability of trinkets and material goods, and maybe because of that, we walk through life with a certain sense of blithe entitlement. We are fundamentally decent, though -- peace-loving and compassionate. We struggle to know the right thing and to do it. And we are, the overwhelming majority of us, people of faith, believers in a just and loving God.
Some people -- you, perhaps -- think that any or all of this makes us weak. You're mistaken. We are not weak. Indeed, we are strong in ways that cannot be measured by arsenals.

IN PAIN
Yes, we're in pain now. We are in mourning and we are in shock. We're still grappling with the unreality of the awful thing you did, still working to make ourselves understand that this isn't a special effect from some Hollywood blockbuster, isn't the plot development from a Tom Clancy novel. Both in terms of the awful scope of their ambition and the probable final death toll, your attacks are likely to go down as the worst acts of terrorism in the history of the United States and, probably, the history of the world. You've bloodied us as we have never been bloodied before.
But there's a gulf of difference between making us bloody and making us fall. This is the lesson Japan was taught to its bitter sorrow the last time anyone hit us this hard, the last time anyone brought us such abrupt and monumental pain. When roused, we are righteous in our outrage, terrible in our force. When provoked by this level of

barbarism, we will bear any suffering, pay any cost, go to any length, in the pursuit of justice.
I tell you this without fear of contradiction. I know my people, as you, I think, do not. What I know reassures me. It also causes me to tremble with dread of the future.
In the days to come, there will be recrimination and accusation, fingers pointing to determine whose failure allowed this to happen and what can be done to prevent it from happening again. There will be heightened security, misguided talk of revoking basic freedoms. We'll go forward from this moment sobered, chastened, sad. But determined, too. Unimaginably determined.

THE STEEL IN US
You see, the steel in us is not always readily apparent. That aspect of our character is seldom understood by people who don't know us well. On this day, the family's bickering is put on hold.
As Americans we will weep, as Americans we will mourn, and as Americans, we will rise in defense of all that we cherish.
So I ask again: What was it you hoped to teach us? It occurs to me that maybe you just wanted us to know the depths of your hatred. If that's the case, consider the message received. And take this message in exchange: You don't know my people. You don't know what we're capable of.

You don't know what you just started. But you're about to learn.

Leland C. Scott <no-spam@junk-mail.net> wrote in message
news:Xdyn7.65376$Hm.720779@typhoon.mw.mediaone.net...

People think it's that rich Arab terrorist. I don't think it is. My money
is on Iraq. They have access to trained pilots, both military and civilian,
who could have flown those jets easy. Given their past ability to get
material for their military programs secretly, planing the kind of attack
we saw today would not be beyond them.

Iraq also has a bone to pick with Bush, the older one, over the Gulf War.
That would explain the attack on the Pentagon, and the apparent attempt to
crash a jet on Camp David. That would please the Iraqi leadership to no end
if they could kill the son, now our current president, of the former US
president whose military still occupies Iraqi soil and beat the crap out of
the Iraqi army.

I too was thinking of Iraq, but with some other reasons...

In the gulf war, the first thing that was taken out was their air
capabilities.
The gulf war was followed with "sanctions" which hit them finantially.
Wasn't one of Saddams buildings attacked?

This would seem to have been echoed with the attacks on your country.
If this is the reason, then we in the UK had better watch out.

Regards,

Brainbuster.

> My point is: Why even MENTION SUCH A THING in a so called "Official
> Bullitin", unless it is reality.

Probably because several of our leading congressmen and Senators already
brought the subject up (In interviews on TV).
They called the attacks "Acts of War" and said that "should" we be able to
trace the actions to a specific country there is that possibility. (Or to a
country giving safe haven to those behind the attacks)

The President even made the statement that the US (NATO has agreed to treat it as an attack on all NATO nations) that any nation harbouring the individual or group responsible would be treated the same as that individual or group.

>

So there is a sound basis for including that in the bulletin.

Quite a few years back when they made their first big expansion...The one
that was too big for them to handle...<:-)) Their service went to pot.
(disconnects in a few minutes when you were able to finally get a
connection) When threatened with a lawsuit they told those who wanted to
cancel to call in...Unfortunately it seemed as if only a few were able to
get through...We canceled the payments through the credit card
company...So...AOL sent us bills....It took nearly three months to get the
account canceled. Then about a year later...They sent us a bill for a
years service.

Never has another company (although some have tried) grown so large by
mistreating customers. They are customers even if they do call them
members.
Once they got our number they were worse than telemarketers, Except they
were billing us.

>why would Ham Radio be needed in an area so small everyone can shout to each
>other?
>

Because they can't just shout at each other. If a Red Cross aid station needs
supplies that
are just a few blocks away, and the Red Cross personal are taking care of
people that are
in need of first aid, Food and Water they can't afford to send their staff out
to get
supplies. That is where Hams come in with operators at all the locations they
are
manning. I is quote obvious that you do not know anything about the functions
of ham
radio operators during an emergency.
Also, do you think that Red Cross, Police, and Fire personal have time to
help victims and their famillies with health and wellfare information.

>You're not talking about a State-wide or even a city- wide disaster here-
>

Not city wide, every hospital in New York is filled with injured. Then consider
all the
other people in the city that need emergency help. You really are and idiot.
You should
just troll down to hell.

>Where does your information come from?

Just because the media does not mention something, it does not mean it is not being used. The media covers the stories that are of most importance to the viewing public. The Red Cross has used Ham radio for years, the Salvation army also uses ham radio. Troll away, Troll

Like everyone else in a disaster situation, you come with what you have.
This one did not require transmitters of any kind, the pro systems work

well.

Having had some experience with govt you must be, as I am, impressed with the ability of NYC to arrange such things as where to put the building rubble while you are digging and how to keep the general public off your back. The mobilization of barges, ferries, tugs and the re-opening of a New Jersey landfill to handle it was and is a first-rate response. The hospital system appears to have done a first-rate job up to and including some information for relatives.

I, for one, am thoroughly impressed with the response of NYC to what has to be beyond the extremes of any disaster planning.

No, it's absolutely correct. It IS common for govt. agencies to require tests for things whose use is not mandated.

>What is illogical is for any government to mandate
>a test for some activity that is not itself mandated.

I disagree. But hold that thought....
>
>The FCC does not mandate that morse code modes be used
>by radio amateurs over and above any other mode. US amateurs
>are given the option of using any allocated mode...or not using
>them.

The ONLY thing that US radio amateurs are mandated to do is follow FCC rules. But that mandate is not limited to hams - all are mandated to follow those rules. By LHA logic, there should be no test of any kind for an amateur radio license.
>
>>For example, most driving tests require that the person being tested

>>requirement to park that way "in real life".
>
>Heh heh...try parking diagonally in a parallel-parking area or
>vice-versa. :-)

So? There is no mandate to park either place.

You wrote: "What is illogical is for any government to mandate a test for some activity that is not itself mandated."

Since parallel parking is not mandated (one can always park somewhere else), you're saying the parallel parking test is illogical.
>

>>Graduation from high school in most places requires passing grades in
>>all subjects, even though there is no requirement that the subjects be
>>used by the graduate, and many of the subjects are required, not
>>elective. Education standards are set by government bodies.
>
>That paragraph is mixing avocados and orangutangs.

Nope.

You wrote: "What is illogical is for any government to mandate a test for some activity that is not itself mandated."

Since many of the required subjects in high school are not mandated activities after high school, you think the test requirementss for those subjects are illogical.

>>> Non-professional (amateur) radio is not a guild or union

Re: being threatened

Group: rec.radio.amateur.policy Date: Wed, Sep 12, 2001, 10:50pm (EDT-1)
From: kb9tmp@my-deja.com (WW - KB9TMP)
"internet-terminal zz4" <zz4@webtv.net> wrote in message
news:20154-3B9FC032-20@storefull-134.iap.bryant.webtv.net...
I am getting these threatening emails saying because I have had an email
address of ww7a@yahoo.com for years a so-called amateur radio licensee
ww7a OWNS my email address..i.e.owns ww7a on the internet.
Does he own ww7a on the internet? Where do I take these threats?
<SNIP>
Regards
Dr. Andrew Forsberg WW7A
A couple of questions for zz4@webtv.net AKA ww7a@yahoo.com.

  #1, Why do you want to use someone else's identity for your email
address?

No Offense but this involves allot of brains? Someone elses identity?
The internet consists of choosing USER NAMES for whatever service you
might sign up for...be it a freebie or a pay service....Some places
allow a minimum of 4 digits..some three. Sometimes it is easier with 4
digit user names than
dfhdfhfghjfxghxrtyuuudr5674s6uaze5y54uys4675474ry@yahoo.com I think
yahoo requires at least 4 digits. If my parents named me george bush am
I using somebody elses name? I presume I could go to court and change my
name to anything desired if that be the case.

This issue does not involve amateur radio !!!! I chose numerous 4
digit user names years ago when signing up for various internet
services.I think I have several more email addresses with user name
ww7a.(theres still hundreds of free email locations)

As to domains I have not even checked on ww7a but if available I really
have no desire for it. ok.... http://www.register.com/ I see
all ww7a domains are available. Would it not make sense to get the
domain vs. telling everybody on the internet the ww7a user name is
legally theirs and playing like an officer of the court? You could be
anybody@ww7a.com Go to http://www.registerclub.com/ and pay
$10 and its yours.(next buy some web space and set up email services)
Heres a good one http://www.valuablehost.com/ $35 a year..200mb

I have had ww7a@yahoo.com for years. The brilliant thing is if I
surrendered it I don't think the user name is availble for years.I've
had user names at yahoo 4 years ago that have not been re-issued yet.I
go there today and although all email gone I get a prompt if I wish to

reactivate it.

I never tried other large free services like Hotmail. Is ww7a
available at Hotmail? At aol?

I now use msn as an isp.I got a 3 digit user name..Is ww7a taken?
Don't know. I also pay $5 a month for the webtv.(being an msn
subscriber) Years ago I chose 6 3 digit user names with the webtv
service.

#2, Just how did WW7A find out about you and your email address?

I presume he wanted an email address at Yahoo..one of the larger email
services that offer other free services like websites,photo
storage,messageboards,clubs,etc. (ps..they are possibly going from free
to pay-pay)

It sounds like there is more going on here than your telling us.
--
'73' From KB9TMP

NO..I get an email as I have c/c/p telling me to quit using ww7a on the
internet and using language as if I'm going to be dragged to court or
arrested.It does say I am a federal criminal. Maybe I am
over-reacting? I have so many problems here and so busy I don't need
others. Now I have to take the time to research this matter and write to
fcc and all that stuff. AGAIN..THE FUNNY THING---if I gave up ww7a
under threats it might be years before available for others.---maybe
thats not it...don't use ww7a anywhere on internet?

http://www.geocities.com/ww7a/

Actually I don't even care about ww7a..maybe I can get another 4 digit
user name at yahoo? It would take months to correct my address on record
around the internet.

And WHICH communications system was "gridlocked" less than 30 seconds after
the attacks?

>How are the rescuers finding people who are still alive under the
>debris? Answer: Cell phone calls from the victims.

And Ham Radio was used "like" this how in the past?

>In fact, there has been no televised story of emergency communications
>which involved ham radio at all after two days of reporting terrible
>tragedy.

Yeah...let's skip past the trivial stuff like trapped firefighters,
financial crisis and lost loved ones to see what kind of radios are in use at
the Red Cross.

>I don't see any
>evidence that your hobby was ever needed.

I make quite a deal over the use of profanity on this NG, however I think
it's warranted here.....

Your lack of "evidence" is most likely due to the unusual placement of
your head up your ass.

Putz.

Not hardly. You haven't been paying attention.

>Someone made a comment about a 20 meter net assisting in collecting
>blood. Think about what a waste of air time that was. And that was
>apparently the high point.

"Waste of time"? I have heard of at least 3 Red Cross chapters helping
to coordinate movement of supplies via Amateur Radio.

THAT'S a "waste of time"? Hold that thought the next time a loved one of
yours is getting a transfusion. Ask yourself how many volunteers, some of them
licensed Amateurs, that helped get that unit of PRBC's into your neighborhood
ER.

>As much as I love ham radio, its time of value in an emergency has all
>but passed.

I reiterate...You haven't been paying attention.

agreed, this is really becoming a mess. you should also note the following about the intruders who have made it up into the 10m band recently. there are many truckers using modified radios that go well up into the 10m band. most of these use AM and are frequently found on 28085 (aka ch-19 'up 1') and 28535 (aka ch-19 'up 2'), but are also spread out between 28100 and 28300. they do seem to avoid 28300-28500 but occasionally i have heard them as high as 28650 or so (ch-40 up 2 is somewhere in there). most of these are small groups of long haul truckers travelling close together, because of this it is almost impossible to interfer with them.

taping them is not a bad idea, but unless you are lucky enough to be running tape when one of them gives out his cell phone number or something like that it won't help. if you listen to them for a while you can often identify their location to within an exit or two on an interstate, the best help then would be to get someone on the road to physically sight them, get license plates and company names and also record them. that information would then be useful in getting something done. i feel that it will only take a couple fcc actions or even just warning letters to trucking companies to shut most of these guys down, after all why would they risk their jobs and trucks just for a quiet radio channel. I have tried to get this kind of real time info into the right areas using the dx spotting network in the past, while this is the most logical method to use for this purpose many users and sysops feel it is an abuse of the network.

i have tried to request help from both the fcc and arrl but have been told they can't help... they seem to be too busy chasing 2.4ghz cell phone intruders to bother with hf intruders right now.

news:20154-3B9FC032-20@storefull-134.iap.bryant.webtv.net...
I am getting these threatening emails saying because I have had an email
address of ww7a@yahoo.com for years a so-called amateur radio licensee
ww7a OWNS my email address..i.e.owns ww7a on the internet.
Does he own ww7a on the internet? Where do I take these threats?
<SNIP>
Regards
Dr. Andrew Forsberg WW7A
A couple of questions for zz4@webtv.net AKA ww7a@yahoo.com.

#1, Why do you want to use someone else's identity for your email
address?

No Offense but this involves allot of brains? Someone elses identity?
The internet consists of choosing USER NAMES for whatever service you
might sign up for...be it a freebie or a pay service....Some places
allow a minimum of 4 digits..some three. Sometimes it is easier with 4
digit user names than
dfhdfhfghjfxghxrtyuuudr5674s6uaze5y54uys4675474ry@yahoo.com I think
yahoo requires at least 4 digits. If my parents named me george bush am
I using somebody elses name? I presume I could go to court and change my
name to anything desired if that be the case.

As long as your not using the ww7a to pose as Dr. Andrew Forsberg WW7A
there isn't a problem. I've been served papers for another person with my
name before, there's no law about using the same name for two different people.
But there better not be anyone with my Social Security Number other otherwise
we've got a BIG PROBLEM. The thing is a ham's call sign to them is just as
personal as a SSN or any other identifier that is unique to that person and s/he alone.
That's when we start to get a little defensive about it, that's all.

Forsberg is wrong. While that happens to be the same letter and number as an Amateur call sign, there is no copyright, trademark or any other right to it, A kid on a walkie talkie from Toys R Us could use that designation, or it could be on anyone's license plate. As long as you are not claiming it to be an Amateur call sign assigned to you, you can use it in any way you wish. Thanks and call me at 717-338-2502 if any problems.

well when will politicians ever learn.....??? when you start a war,
you had better damn well finish it. dead men make great
enemies.....swartzkoff was 100 miles from bagdad when bush told him to
stop....now does anyone think it was a bad idea for him to be allowed
to attack and kill all of those bastards that support this
animal...how many times over the years have we had problems with this
bastard???? man o man...i sure hope junior does the job this time and
does it right......and also on that rag head hiding in afghanistan. i
think we should gear up again and do it , and if we have to do it

alone, then so be it.....we should and we will.....the world doesn't like us for a lot of reasons. but we shall continue to support the jews and i think we should...so if the towel heads don't like it for whatever reason, well just bring it,..geez.....

Dick,

That wasn't from CBS in New York, but is a copyrighted
editorial by Leonard Pitts Jr. of the Miami Herald,
entitled "We'll go forward from this moment".

While it is certainly a moving piece and well worth
the reading, it probably should not have been published
in a public newsgroup unless you had permission of the
author.

With all kind wishes,

Yeah Leland..... we have a major possible bomb waiting to happen here where I live.... Midland! If a plane crashed into Dow Chemical, the Midland plant, there is enough variety of chemicals and stuff like that could take out most of Mid-Michigan and leave a very big hole if these are mixed together or ignited. Fortunately I would think that they keep these items separated. But we here in Midland could very well be a target of future attacks, hell, ya never know....

my my....a piece of work from the indian territories speaks on the
newsgroup.
sir i am not a ham now or will i ever be. many of these hammies, if
you want to call them that, who hang around here are what is called by
the 'old heads' of ham radio.......shall we say......riff raff that
somehow got a ham license but are still cbers. but they run around
with this holier than thou attitude here, which is the only place they
can get away with such behavior. and whine about power..... and
perhaps your royal lowness fits that bill..... good buddy...

There was a sniper detailed to take that bastard out, they were in position in bagdad and no one had the balls to give them the order. I know of the tem and one member personally.

another thing to note. there was a comment about freebanders below the 10m band causing noise in the lower end of the band... well one day i was hearing buckshot up above 28600. i tuned and tuned and finally found the source... some cb'er on 27035 (channel 2 or 3 i think) blasting away splattering around 2mhz both directions! now this would be understandable if he was my neighbor or something like that, but i am in western mass and this guy was in new orleans la! of course he was probably running big power, but he wasn't any louder than any of the other cb'ers i could hear at them time, probably because his other 5kw was spread out so wide. so don't think their noise is only around the bottom of the band, some of that modified stuff and 'linears' are so dirty they could probably be as bad as spark gaps!

I heard on the Art Bell show last night that Sept. 11 is Muhammad's
birthday. Could that be true?

You know, it's obvious this is just a troll, but I think I'd like to
respond, anyway.

I, for one, am very glad ham radio didn't become the main
communications medium in this crisis. Why? Because that would
indicate destruction of infrastructure on a far more massive scale
than we saw.

And ham radio has never been the main way the average Joe on the
street called for help; most aren't hams, remember? That's nothing
new. If anything, cell phones are a welcome development; obviously,
they can be invaluable (if for no other reason than they're
everywhere).

Ham radio won't always serve the most important role in a crisis. It
makes little sense to attack it, therefore, just because things never
got so terrible, on such a large scale, that ham radio was all that
was left. It has been reported that even this attack, however, took
out a number of services that went through the cell phone tower
/telephone exchange in the WTC buildings. Several people reported the
inability to use their cell phones after the attack (it probably
depended upon whose service to which one subscribed). Furthermore,
many of the telephone circuits in the area were overloaded; cell
phones were by no means a reliable method of communications.

Finally, it should be noted that a number of hams are carrying out
communications duties in the wake of the attacks, ranging from health
and welfare to assisting with emergency traffic. See www.arrl.org for

some of the details.

Perhaps at a time like this it would make a little more sense to pull together, rather than looking for a fight over trivial issues.

We have discussed this very matter for months before this tragedy occurred. You might all believe we are sick for planning for these things, but it is far better to be prepared for the worst, and have nothing happen, than have the world fall down around you and be caught with your head up your ass. Here in N.W. Ohio we are at the "epicenter" we have 2 nuclear plants within 75 miles, we have 4 oil refineries, the Lima Tank plant, several chemical plants. We have to be prepared to set up shelters and decontamination areas for the affected areas. In case of such a disaster, we would not only be supporting our own county, but might be the only ones available to handle the areas closer to the incedent, incase the workers in that area are contaminated or worse. If any of you here wish to help out now or in the future, i encourage you to talk to your local Red Cross and volunteer for their Disaster Action Team (DAT) I know that the Greater Toledo chapter in Ohio needs volunteers, they cover 3 counties, the city of Toledo is as large as our entire county here, yet our DAT team is at least 3 times larger. Deidcated hard working volunteers are needed all over the country, especially in areas like Texas, Nevada, Utah, New Mexico, Arizona, and they are especially looking for those with radio communications experiance.

I very much doubt that the US will be in a position that they have to take on the scum all by yourselves. I was just watching some of the news programs, and it appears that NATO has activated under article 5 - whereby an attack on a member nation of NATO is viewed as an attack on NATO. All that needs to be done now is that if the US decides that it was an attack by a foreign power, then NATO will fall in alongside with the US. Additionally, Australia is looking at the same thing via the ANZUS treaty, now OK we may well be a pissant little country, but I guess that in the end every little bit counts. I look forward to kicking some towel head arses alongside with other allied nations.

For all the Trolls like bill W7TI. As of Sept. 13th this is part of a story on the ARRL web site.

As the response to the unprecedented terrorist attacks on the US September 11 moves into a third day, calls have gone out for additional amateurs to support the Salvation Army's relief efforts in Washington, DC

The trolls can get the full story at arrl.org
of course they will not look it up, they rather be uninformed trolls.

Larry,

I completely forgot about the pointer with the rubber tip.
Maybe it was a repressed memory.

While I can only speak about the Sisters Of Mercy (sometimes we thought the name was a bit ironic) I can say that they were excellent teachers who kept you on track and forced you to succeed. When I went to college I found that no one really cared if you succeded or not and at first it was very difficult for me to stay focused especially when the professors were telling you and they did not care if you even came to class because they were going to get paid whether or not any showed up.

Most of the students at the Catholic elementary and high school I attended came from suburban working class and middle management neighborhoods and as a general rule they were used to discipline at home that often rivaled what they got at school.

I agree with you that some of the practices at Catholic elementary schools in the 50s and 60s might be cause for invesitgations and lawsuits today, but some of the discipline going on in the student's homes would bring out the social worker today. It went hand in hand and in most neighborhoods served by the parish, it was widely accepted.

Maybe we are more enlightened today.

That jet was not meant for Camp David, there is no statement to be made there,
it was meant for either the White House or the Capitol.

_____

That's my point exactly, JJ. Ham radio USED to be a valuable tool in an emergency. Back when there were no cell phones, long distance was unreliable and expensive and local authorities had little disaster training and/or equipment, ham radio had a useful function.

Time has moved on and pretty much passed us by. Each of us only so much time, energy and money to spend. Let's spend it where it will do the most good. Get involved with your local emergency people, your local search and rescue, volunteer fire department, Red Cross or wherever your interests lie. If your local disaster communication equipment isn't up to snuff, get involved. Go to city council meetings and demand improvement. Pass out leaflets at the next bond election. Demand that opposition to cell towers cease. Insist on more cell towers in remote areas. I could go on and on, but I hope you get the point.

We pay our emergency services people to do a job; lets do all we can to see they have the resources they need so they do not have to depend on some unknown quantity of volunteers.

I remember a story about the Oak Ridge Tennessee fire. The only communications in and out of the area for a while was a VHF repeater built in to a 55 gallon oil drum, which was buried underground, and somehow the antenna survived the fire.

There was also the story a few years ago where a hurricane flooded out the telephone exchange in a New England area, and over a million people has zero phone service for days, both land line and cell based. The only communication was by radio.

All one had to do is listen to the air waves to know just how irrelevant hams are. A bunch of old farts talking the same tired crap, day in and day out. This notion that hams could provide a much needed service in times of emergency today is fanciful nonsense. Anyone who has a cell phone can do what they do and probably better.

You're completely missing the point, and you're also completely wrong. I hate to tell you but ham radio doesn't consist of a bunch of old farts, but many people of different ages all over the world. They provide communications for law enforcement, fire, ems and provide health and welfare traffic when major disasters exist. Disasters that have rendered conventional radio systems and cell phones USELESS. Nice try, but you're way off. By the way, have you ever heard the Maritime Mobile Net on 14.300? If you did, you wouldn't have been stupid enough to post such nonsense.

Larry,

"any cop should be able to safely disable a person with a weapon"

Have you seen the size and gender of some cops?
Police Departments would love to hire people that could always get the job done with a minimum of force but that can't always happen.

The most important thing for a cop to do is come home from work at the end of the day. The penal law should guide their actions. But remember there are many variables in these encounters. And it's better to be judged by twelve than carried by six.

Leonard only believes what he sees. Just like the proverbial mule and its close cousin, the LHA JACKASS.

In NYC right now, hundreds of hams are manning the 3 dozen shelters freeing up volunteers to help elsewhere. Of course, they do so without TV coverage or the need to be recognized, therefore they don;t exist according to LHA Left coast logic.

Cellphone usage for the 1st 19 hours after the collapse was near impossible due to the tremendous volume of calls. Phone communications was virtually impossible with 50 miles of NYC. Of course, it never happened because LHA didn't experience it. Maybe next time LHA could be up close and personal and then give his expert 50 years of radio communications impressions from deep in the ground, like the worm he is

Only kidding there Len. You keep on keeping on.

>being used.

So, if no one else sees/hears anything, it still exists?

If the only "news medium" that mentions amateur radio activities during this time of crisis is about amateur radio, amateur radio is somehow in the "forefront" of everything?

>The media covers the stories that are of most importance to the
>viewing public.

The "media" covers whatever the editors of the news media think is of "importance to the viewing public." First-year working news journalists learn that (usually abruptly) on the job.

To be fair, news editors do a credible job in directing what is covered. In my area the Los Angeles TIMES presents a mass of credible information for readers. Nearly the entirety of the main section of today's issue is all about what was done on Day 2 of this tragic event.

There is no mention of amateur radio "emergency communications" either in the TIMES nor on five major TV networks continuously broadcasting news and images. Does that mean such things don't exist? No. It means that the amateur radio "emergency communications" activities are small, minor in comparison to what everyone else is doing.

>The Red Cross has used Ham radio for years, the Salvation
>army also uses ham radio. Troll away, Troll

While that is true, it is not justification for calling anyone a "troll" or otherwise deprecating or denigrating others for pointing out what is obvious to anyone of the general public seeing, reading, or hearing the events of this terrible time that began on 11 September.

The conclusion is that amateur radio "emergency communications" is a very minor part of the overall effort in this time of national crisis. Activities must be viewed in a proper perspective, not as what individuals want to see.

First of all you are not using his identity. That may be his ham radio call and it applies to ham radio, it is only his call sign as assigned by the FCC to allow him to operate and identity his station on the ham bands, it is not his identity outside the ham bands, and has nothing to do with the internet or anything else. Ask him if his driver's license has his name or ham call on it. Tell him to pound sand and if he keeps hassling you via private email report him to his ISP

Not at all...yet news coverage featuring amateur radio
"emergency communications" after the Northridge
Earthquake was conspicuously absent. It wasn't on
TV, it wasn't in newspapers. It was stated in amateur
radio "news media" as providing "emergency
communications."

Those who wish to get involved in REAL emergency
communications can go to the website Kelley has
provided above and learn, adopt a system that does
work and can function.

Turner and his twin brother Thorpe are just ignorant trolls.

Neither have explained the value of their cell phones when a hurricane
takes out the power and cell sites.

What have we learned?

1. Turner and Thorpe are trolls.

2. Ham radio isn't needed in every emergency situation.

3. Turner and Thorpe think you can use a cell phone even though those
services aren't available due to power loss or cell site damage.

4. Hams have helped out in recent floods when other forms of
communications including cell phones are rendered useless.

5. Turner and Thorpe must have invested lots of money in Iridium
Satellite equipment.

6. Hams have helped out after recent hurricanes when other forms of
communications including cell phones are rendered useless.

7. Bill and Jack deserve each other.

Please be careful to remember that most muslims don't do or agree with stuff like this. In fact, I'd venture to say the "people" who did this really aren't Islamic, any more than the KKK is Christian.

We need to be careful not to allow our anger to be redirected where it doesn't belong. Most muslims I've heard (both American and otherwise) condemn and hate what happened in the strongest terms. They're just as shocked and angry over it as everyone else.

For that matter, a good many ordinary American muslims probably died in those towers.

That's a fair answer. But to be able to make such an assumtion about
it's future survival, you'd have to know how many would now be using CW
if none of them had been able to pass a 5WPM code test.

Flying the plane is easy once it's in the air. Taking off and landing is the hard part. The Arab didn't have to worry over the hard part, he wasn't going to land.

Virtually everyone is "able to pass" a 5wpm code test. It probably
doesn't matter much if it is an FCC requirement or an ARRL merit
certificate. I could be wrong about CW having enough merits to
survive without an affirmative action program but I certainly hope
I'm right. IMO, all it will take is the ARRL and hams like you and
me advocating the mode. Surely the ARRL will continue the W1AW code
practice sessions after the requirement is dropped.

>communications tool.

Incorrect. The description of the California Auxilliary
Communications Service (ACS) does NOT "feature
amateur radio as it's primary tool." Read it again.

The ACS integrates both civil and governmental radio
services as well as landline communications services
into a unified whole.

While regular ACS nets are run by amateur licensees,
they state openly that they do not consider amateurs
over anyone else.

I can understand the rather open (in here) chest-beating
and (somewhat misplaced) self pride that comes from
having been granted a federal radio license, but trying to
use only a part of an official government's description is
starting to look ludicrous.

In any REAL emergency, it does not matter what anyone's
"credentials" are but rather who can do the job best. That
best includes those who are prepared, are trained, and
have experience...experience in modern-day communications
and the ability to integrate with the infra-structure.

To be correctly negatively critical of the ARRL, I would fault
them for not emphasizing integration with government
resources operationally or technically...and overemphasizing
the past history of amateur radio activities as deeds worthy
of medals, pomp, and framable commendations.

Having been granted an amateur radio license does not
automatically equate personal respect that is due others
who have done good deeds via amateur radio.

You have significantly overstated the truth of the matter. If it were
true then "virtually everyone" with a ham license would be General and
above.

> It probably
> doesn't matter much if it is an FCC requirement or an ARRL merit
> certificate. I could be wrong about CW having enough merits to
> survive without an affirmative action program but I certainly hope
> I'm right.

I probably don't believe there is as strong a coupling between merit and
survival as you do. There is probably a stronger coupling between ease
of use and survival.

> IMO, all it will take is the ARRL and hams like you and
> me advocating the mode.

Wonder why the FCC never thought of that? ;-)

> Surely the ARRL will continue the W1AW code
> practice sessions after the requirement is dropped.

For a while. CW will last as long as ham radio, I expect.

Once again, Leonard H. Anderson, vile and venomous troll that he is,
demonstrates that he speaks with forked tongue.

He at once says Amatuer Radio is a great avocation, then attempts to cut
it's throat at every opportunity.

>If the only "news medium" that mentions amateur radio
>activities during this time of crisis is about amateur radio,
>amateur radio is somehow in the "forefront" of everything?

I have the distinct honor of being a part of two different programs,
neither of which are big in "media" exposure, yet both contribute to America as
a whole.

Are they "forefront"...?!?! No. But then they are vital nonetheless.

Only Lennie the Liar (and Leonard H. Anderson IS a liar) makes this
assertion that "we" are saying so.

Is Amatuer Radio involved in disaster recovery in New York...?!?!

Yes it is.

Has the media been rushing to drag Amatuers in front of a camera and say
"Geez...look at him...HE's got a RADIO..."...?!?! Of course not... But does
that mean it's not happening???

Again, of course not. It is. It's a fact.

And heartless, lying deceitful punks like Lennie Anderson will DO and SAY
anything to make it appear as though it is less than what it is.

Because he's a creep. He was born a creep...he was raised a creep, and
he's a creep to this very day.

>It means that the amateur radio "emergency
>communications" activities are small, minor in
>comparison to what everyone else is doing.

No...what it MEANS is that they have better things to do than cozy up to TV
camera crews and get thier pics on the tube to blunt your rants, Your
Putziness.

>While that is true, it is not justification for calling anyone a
>"troll" or otherwise deprecating or denigrating others for
>pointing out what is obvious to anyone of the general
>public seeing, reading, or hearing the events of this
>terrible time that began on 11 September.

Sure it is. It was a troll from the outset, and it is a troll now....And you seek to blunt criticism of it becasue YOU are a troll.

Again, do you think that these people have nothig better to do than satisfy YOU..???

>Activities must be viewed
>in a proper perspective, not as what individuals want to
>see.

And of course YOUR evaluation of the overall merit of what the Amateurs are contributing is based on what first hand practical experience, You Lyingness?

Your "evaluation" is based solely upon a lak of media coverage of what YOU wanbt to see.

I haven't seen any specials or "human interest" stories of ER nurses or the people who run the hospitals, but are they not there? Do thier contributions not add to the overall recovery effort...???

You are SUCH a PUTZ...!!!

What Amateurs say about amateur riles/regs MAY matter when
presented appropriately throught the legal process which the
FCC follows. In the end, the FCC makes a ruling or rulemaking
which may or may not address or satisy each and every
amateur's opinions.

Cheers,

>Please be careful to remember that most muslims don't do or agree with
>stuff like this.

You are quite correct. If anyone studies the Holy Koran, they will see
that many of the TRUE "fundametals" of that religion parallel
Christianity...Faith in one God, "The Golden Rule", responsibilities of
believers, etc.

But just like those who can find a line in the Bible to "justify" just
about anything, those of the Islamic faith are saddled with thier share of
those who use the Holy Koran to validate thier hatred and murderous characters.

They are anything BUT "Muslim".

That's why I practice my own beliefs in private. I have no use for
organized religion of ANY faith...I just don't have "faith" in THEM!

>For that matter, a good many ordinary American muslims probably died in
>those towers.

Yep. This act wasn't against an "American Icon" as I have heard some TV
commentators call the WTC...It was an act against the world. They killed
people of all faiths, races and nationalities. It only had the misfortune of
being on American soil.

I agree with the commentor who stated that this only strengthened our
resolve and brought us together.

Now...time to go to work.

Ham radio is a hobby. There is no requirement that it be used during emergencies; it is simply offered by those trying to contribute in a positive way. So this time people found other ways to communicate...that's good. Besides, when are hobbies ever "needed"? Hobbies are there for pleasure. You must be pissed because you couldn't pass the license exam, now you have a chip on your shoulder. Try again, troll...and any ham who is upset by your comment is missing the point as well.

>Incorrect. The description of the California Auxilliary
>Communications Service (ACS) does NOT "feature
>amateur radio as it's primary tool." Read it again.

Once again Leonard H. Anderson of Lanark Drive in Sun Valley, CA
perpetrates a lie in the face of facts to the contrary.

Paragraphs 2 and 7 of the ACS charter SPECIFY BY NAME Amateur Radio
assets.

>While regular ACS nets are run by amateur licensees,
>they state openly that they do not consider amateurs
>over anyone else.

Yet given a choice between "John Q. Public" volunteer and a licensed
Amatuer Radio Operator, GUESS who's at the helm of these assets...?!?!

>I can understand the rather open (in here) chest-beating
>and (somewhat misplaced) self pride that comes from
>having been granted a federal radio license, but trying to
>use only a part of an official government's description is
>starting to look ludicrous.

No, you lying, self-congratulating freak, what's "ludicrous" is that you
STILL insist on trying to present yourself as some sort of "corporate
knowledge" on communications matters when you can't even read your own
references.

What a putz.

>In any REAL emergency, it does not matter what anyone's
>"credentials" are but rather who can do the job best. That
>best includes those who are prepared, are trained, and
>have experience...experience in modern-day communications
>and the ability to integrate with the infra-structure.

You mean like how Amateur Radio operators are the asset-of-choice for most
emergency communications systems (except for 9-1-1 facilities, where it's the
person with the best civil service test scores, regardless of skill or
training...) where flexibility and functionality are optimized...?!?!

>Having been granted an amateur radio license does not
>automatically equate personal respect that is due others

>who have done good deeds via amateur radio.

Keep repeating that to yourself, Oh Licenseless One.

I am sure you believe it.

>Ham radio is a hobby.

Better re-read Part 97 again, Doug. No where in the regulations is the
word "hobby" used.

However "service" is on several occassions.

>There is no requirement that it be used during
>emergencies; it is simply offered by those trying to contribute in a
>positive way.

True, but there is an expectation that Amatuers will use this valuable
electromagnetic spectrul allocation in such a way as to render public service.
As a matter of fact, emergency service features prominently in the first
paragraph of Part 97 under "Basis and Purpose".

No one licensee is expected to do so, but if the "service" as a whole
fails to do so, the FCC would be justified in RE-allocating that spectrum to
users who could.

Think about that.

Amateur Radio Volunteers Rising to the Occasion

NEWINGTON, CT, Sep 13, 2001--Some already are calling it "Amateur
Radio's Finest Hour," as volunteers answer the call to assist in
ongoing relief and recovery operations in New York City, Washington,
DC, and western Pennsylvania. The need continues for operators to
assist over the long haul, however. Current estimates suggest hams may
be needed for a month or longer in the New York City area, and for at
least the next two weeks in Washington, DC.

Amateurs Continue American Red Cross Support in Manhattan

New York City-Long Island Section Emergency Coordinator Tom Carrubba,
KA2D, reports that, as of this morning, hams were supporting emergency
officials and the American Red Cross relief and recovery effort.
Amateurs were staffing a dozen Red Cross shelters in addition to one
staging/National Disaster Medical System center, various Red Cross
units, and the Greater New York City American Red Cross Headquarters
as well as the New York City Office of Emergency Management.

Carrubba says the telephone system in lower Manhattan continues to be
problematic because of the high call volume. "American Red Cross
communications are overloaded, and traffic from the shelters is coming
into the New York City net at a rapid pace," he said. "The Amateur
Radio ops are doing a great job under very difficult and strange
conditions, but this is what they have trained for; they are getting

it done well."

Red Cross Communications Officer Jay Ferron, N4GAA, agreed. "As of today, more than 90 hams have been involved in the operation," said Ferron, who's on the scene in lower Manhattan. "The Amateur Radio community has come out very big and very strong." Ferron said local clubs and repeater groups have volunteered gear, frequencies and operators. "We've had responses from as far away Philadelphia and Maine, as well as Rhode Island, New Jersey."

More than a dozen hams from Long Island's Suffolk County Amateur Radio Emergency Service have been deployed to New York City. Suffolk County District Emergency Coordinator and RACES Officer Bill Scheibel, N2NFI, says the Long Island hams will support the New York City ARES team in lower Manhattan. "We are still working on our rosters in anticipation of further need as we go forward," Scheibel said today. He said some of the hams already on-site have told him they'd be willing to rotate back to Manhattan for additional duty after a break at home.

At present, Carrubba is seeking volunteers from the Greater New York City region--Northern New Jersey, Eastern New York and possibly Connecticut. "We have had many offers from out-of-state," he said. "I regretfully declined, as there are no provisions to house them, entry into NYC is difficult, and there's nowhere to park." Several out-of-area volunteers are on hold for the moment. Carrubba asked out-of-state volunteers to "stand by until we can provide for your safety and comfort."

Prospective volunteers should be equipped with 2-meter H-Ts, extra batteries and portable antennas to handle daytime and overnight communicator shifts or to assist with shelter operations and other duties. Contact Tom Carrubba, KA2D, via e-mail, ka2d@arrl.net.

The N2ARC Princeton, New Jersey, Red Cross station suspended operation September 13. Gerry Jurrens, N2GJ, thanked all who contacted him to volunteer. He said the station will be reactivated, if requested by the American Red Cross.

Amateurs Muster at Pentagon to Assist Salvation Army

At the scene of the Pentagon attack near Washington, DC, Northern Virginia Section Emergency Coordinator Tom Gregory, N4NW, reports an "upbeat" crew of about two dozen amateurs is staffing four Amateur Radio stations in the immediate vicinity of the Pentagon.

"What shocked me the most was the devastation you can see right there, 100 feet from the building," Gregory said. "The destruction is total."

The ARES operation is providing logistical support between the Salvation Army's relief and recovery effort on site and the agency's Arlington headquarters. The Salvation Army has been providing food and refreshments to the crews engaged in the Pentagon investigation and recovery operations.

Gregory reports three of the stations on the Pentagon's outer perimeter--one near the main Salvation Army assembly point--and one in the Pentagon "courtyard." A repeater net has been established on the Alexandria 145.15 MHz repeater for the four canteen units and a net control station at the Salvation Army headquarters. Chuck Rexroad, N4HCP, is coordinating volunteer staffing for the team.

Some 60 pieces of traffic were passed yesterday, Gregory said. "What we're finding is that communication is very difficult because of the tremendous amount of noise from the construction-type equipment and the generators providing power for the lights and support staff," he said. Because of the noise level, he and Rexroad opted to rotate operators in and out of the immediate vicinity of the attack as frequently as possible.

"There's the emotion of it, and there's the tremendous amount of noise, and it's very grating on you because you can hardly hear the radio to communicate," Gregory explained. In addition, the cellular telephone network has been swamped, and, because the Pentagon remains open, there's a lot of other RF in the vicinity to complicate matters further.

Gregory described the entire area as "very crowded with people" inside and outside the Pentagon. "People and equipment cleaning up, finding bodies, finding plane parts, firefighters still checking for hot spots, hoses, equipment," he said. "The damage to the building looks worse when you are right next to it than it does on TV."

The site is fully secured, and soldiers armed with M-16s and police control entry to the fenced-in compound. A temporary road has been constructed from Washington Blvd extending several hundred feet to the hole in the building in order to move heavy equipment.

"I found that it took me a few minutes to realize the gravity of what was going on and the importance of what we hams are doing in our own small way to help out," Gregory said. "The devastation of that building is awesome, and it puts things in perspective and it certainly made me proud to be an Amateur Radio operator and serve the people of the United States by offering this support."

Gregory said the Pentagon ARES operation continues to seek volunteers with VHF hand-held transceivers. "Because of the immensity of the thing, we're trying to have six amateurs on duty at all times," he said. "We need 20 volunteers every day for at least two weeks."

Volunteers should e-mail Tom Gregory, N4NW, at n4nw@arrl.net. He asked operators to indicate their present location and transportation arrangements, equipment type, and time and dates available.

Gregory said he anticipates that the Pentagon ARES operation might be asked to also support the similar Red Cross effort in the capital.

"Fourth" Crash Site Support Continues in Western Pennsylvania

Meanwhile, at the so-called "fourth" plane crash site in rural Somerset County western Pennsylvania, Kevin Custer, W3KKC, reports a busy scene as the investigation continues. Custer arranged preliminary repeater communication into and out of the crash site on Tuesday to help the Red Cross, Salvation Army, Pennsylvania State Police, the FBI and other state and federal agencies on the scene.

"At this time we are preparing for the possibility of family members coming to the crash site--or close by," he said. "I have communications in place for hand-held coverage of the crash site to our local emergency operations center and three surrounding counties." Eric Hegerle, N3VOC, of the Salvation Army Team Emergency Radio Network reports SATERN was using 146.610, 146.835, and 145.390 MHz linked repeaters for communication between Pittsburgh and the crash site.

"Things have calmed down since the FBI has taken over site and has secured it as a crime scene," Custer reported. This place has literally turned into a small city.

He said federal investigators continue to search for the flight data recorder--the so-called "black box"--as well as any evidence of what happened. He said the investigation could continue for several weeks.

Dick:

I remember one account of a passenger using his cell-phone while holed
up in the airliner's lavatory. Sounded a bit far fetched; the lavatories are
not usually near a window, and I'd think a window would be essential to
allow an aperature for the 800 MHz RF to get out of the aircraft. As
the events of 9/11 (odd coincidence, isn't it?) are autopsied, the role
played by cell phones will be interesting information.

Here's what I think happened on the way to Baghdad in the Gulf War:

The other Persian Gulf countries wanted Saddam out of Kuwait, and if he could be put out of power, so much the better. But once Kuwait was liberated and what was left of the Iraqi army was on the run, they faced a real problem. If Stormin' Norman was allowed to keep rolling, Saddam would be toast and Iraq would wind up under some sort of new, Western friendly government. That would set a precedent that many of the Gulf countries found unacceptable.

So the word was quietly passed to Papa Bush: Stop short of Baghdad and let Saddam stay, and we'll keep oil prices down and quantities high. And we'll cooperate with you as much as we can on intelligence, military bases, investment, etc.

The alternative would be to piss off our friends in the region. So Papa Bush went along with the deal.

Waddya think?

The FCC wants tapes of the actual transmissions. A report with a tape is worth
100 with no tape. That's just the way it is, I don;t know why. Apparently a
tape of the actual transmission is evidence, where a report by a non-FCC person
is not.

> if you listen to them for a while you can often identify

It's been done. Read the enforcement letters at the ARRL website. Riley & Co.
have gone after truckers and others using the ham bands. But they have to have
evidence in order to do so.

>were telling you and they did not care if you even came to class because
>they were going to get paid whether or not any showed up.

I found the same thing. Which means that those "excellent teachers" did a lousy
job of preparing the students for the real world. In some cases the results
were tragic. Bright young people with scholarships to good colleges flunked out
because they had never developed the SELF discipline to do what needed to be
done. College freshmen getting in bigtime trouble with booze and drugs because
there was nobody to say they couldn't do those things, and they had never been
discussed in high school.
>
>Most of the students at the Catholic elementary and high school I

I'm sick to death of your negative portrayals of radio amateurs in emergency situations. QST is loaded with stories of how amateur radio is used in emergency situations. I'm certain that most of us are more concerned with the welfare of real people in a tragic situation than we are with your self-important analysis of amateur radio. Kindly blow it out your ass, Len.

>>Ham radio is a hobby.
>
> Better re-read Part 97 again, Doug. No where in the regulations is the >word "hobby" used.
>
> However "service" is on several occassions.

The word "service" used thoughout Title 47 CFR is a regulatory term denoting a type and kind of radio activity. Every radio activity is termed a "service" throughout Title 47.

Amateur radio is an activity engaged in for non-pecuniary reasons; that is why the term "amateur" is applied there.

>>There is no requirement that it be used during
>>emergencies; it is simply offered by those trying to contribute in a
>>positive way.
>
> True, but there is an expectation that Amatuers will use this valuable >electromagnetic spectrul allocation in such a way as to render public >service. As a matter of fact, emergency service features prominently in the first
>paragraph of Part 97 under "Basis and Purpose".

Given the political boilerplate phrases attached to all kinds of regulations and laws in the federal government, this is not unusual, but let's look at the specific wording of 97.1 (a):

"Recognition and enhancement of the value of the amateur [radio] service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications."

The words "recognition" and "enhancement" ar buzz-phrases, pure and simple. They carry emotional baggage, not some exactitude of purpose.

"Note the word "voluntary" in the second line. Voluntary. No one is required to perform any "service" or do what 97.1 (b) through 97.1 (e) contain.

Clearly, many radio amateurs are confused as to the word "service." Amateur radio is not a military service. Amateur

radio is not a dinner service. The word "service" used
throughout Title 47 CFR is a regulatory term denoting a
type and kind of radio activity defined in the regulations.

> No one licensee is expected to do so, but if the "service" as a whole
>fails to do so, the FCC would be justified in RE-allocating that spectrum to
>users who could.
>
> Think about that.

Many, including myself, have "thought about it" and come to
the conclusion that the 97.1 (a) boilerplate politicall nice-nice
is absolutely necessary for amateur radio to exist.

In this time of crisis, consider the language of 97.1 (e):

"Continuation and extension of the amateur's unique ability
to enhance international goodwill."

Considering the USA on day 9-11 was deliberately attacked
by foreign individuals, is there any doubt that the entirety of
97.1 is just political phraseology?

Continue with your hobby and quit trying to self-congratulate
yourself that you are some kind of "service to your nation"
on being granted an amateur radio license.

Keep things in perspective or your thinking goes into a
vanishing point of nothingness.

>perpetrates a lie in the face of facts to the contrary.

I don't live on "Lanark Drive."

Col. Jessup makes many mistakes when he is enraged.

> Paragraphs 2 and 7 of the ACS charter SPECIFY BY NAME Amateur Radio
>assets.

Jim Kelley tried to make a case of amateur radio being
"prominently" mentioned. They are not so prominently
featured.

>>While regular ACS nets are run by amateur licensees,
>>they state openly that they do not consider amateurs
>>over anyone else.
>
> Yet given a choice between "John Q. Public" volunteer and a licensed
>Amatuer Radio Operator, GUESS who's at the helm of these assets...?!?!

At the "helm" (metaphorical) of the California ACS is the
appointed head of the ACS. It is on the ACS website.

What must be at the heart of Col. Jessup's rage is that
the ACS is not made up entirely of radio amateurs...and
the colonel has nothing to do with it.

> No, you lying, self-congratulating freak, what's "ludicrous" is that you
>STILL insist on trying to present yourself as some sort of "corporate
>knowledge" on communications matters when you can't even read your own
>references.

Personal insults do not make Col. Jessup's case nor anything
positive about US amateur radio.

Feel free to post the entirety of the California ACS
documentation and let others determine which radio
service is the "most prominent" or "at the helm."

> What a putz.

The word "putz" is Yiddish colloquialism for the anus.

When Col Jessup (nee' Robeson) cannot control himself
on arguing the subject (nearly always) he then resorts
to personal insults. Demonstrated emotional instability
(as the colonel does now) is not a discussion of any
subject.

>>In any REAL emergency, it does not matter what anyone's
>>"credentials" are but rather who can do the job best. That
>>best includes those who are prepared, are trained, and
>>have experience...experience in modern-day communications
>>and the ability to integrate with the infra-structure.
>
> You mean like how Amateur Radio operators are the asset-of-choice for
>most emergency communications systems (except for 9-1-1 facilities, where it's
>the person with the best civil service test scores, regardless of skill or
>training...) where flexibility and functionality are optimized...?!?!

In REAL emergencies, such as the Northridge Earthquake
of 1994, the REAL emergency communicators are
organized, trained, and drilled as an integrated whole,
have the appropriate equipment to do the job.

In the January 17, 1994, emergency in the Los Angeles area
the organized, trained, drilled, and equipped emergency
workers did function well regardless of the cutoff primary
power to an area of about 10 million. That included the
insulted and maligned "civil service workers" here who
included the police and fire personnel.

In the September 11, 2001 attack on the World Trade
Center in New York City, the "civil service workers" (the
NYPD and FDNY members) functioned heroically to the
point that at least 90 of them lost their lives while trying to
rescue others. The New York City government personnel
(civil service employees) organized themselves out of the
chaos, brought in construction equipment to continue the
rescue attempt, set up work areas and routing for the
trucks carrying out rubble. They did that with resolve,
ignoring the hazards, working long hours. They also used
the city's communications equipment. They worked
together despite a condition unexpected by anyone.
Organization and training, constant drilling for emergencies
worked very well in NYC.

It seems to come as some kind of surprise to many radio
amateurs that there are professionals that use radio
effectively even though some of them are civil service
employees. Perhaps that is the result of years of one-sided
conditioning by ARRL publicity and self-boosterism.

It also comes as a surprise that the constant mantra of "all the cellphones quit working in an emergency." Obviously those cellular telephones worked well enough for two victims to call through the rubble burial site to be rescued.

"Flexibility and functionality" do not arrive as some kind of extra attribute carried with a radio license. Real flexibility and functionality comes about through planning, organization and constant training. The planning and organization for any community's emergency preparedness should include integration with the government and commercial radio services. Real emergencies are not "Field Day" events in the local park nor do they involve point collection contests.

>>Having been granted an amateur radio license does not
>>automatically equate personal respect that is due others
>>who have done good deeds via amateur radio.
>
> Keep repeating that to yourself, Oh Licenseless One.

My commercial first class radiotelephone operator license was granted before the colonel was born.

The colonel seems confused as to which service he is in. The USMC served the colonel his discharge but the US amateur radio service is NOT a military service at all. [the word "service" in Title 47 is a regulatory term denoting a type and kind of radio activity...it is applied to nearly all other radio services; e.g., citizens band radio service]

Amateur radio is a radio activity done for a non-pecuniary interst. It is an avocation.

> I am sure you believe it.

Absolutely. Myself and the rest of the citizens of the attacked USA...with the exception of a few angry, confused and ignorant radio amateurs in this newsgroup.

Leonard H. Anderson.

>>I'm sick to death of your negative portrayals of radio amateurs in
>>emergency situations.
>
> He has to, Dave. The TRUTH ruins his rants. He is a monumental liar,
>and that fact is known to all.

The "TRUTH" as Robeson always uses it is simply that opinion held by Robeson.

Let's look at "TRUTH" and some lines in the closing scenes of the motion picture "A Few Good Men," paying particular attention to the lines spoken by the character of the USMC Commandant of the Gunatanamo Bay Marine Detachment (played with marvelous smarminess by Jack Nicholson).

Col. Jessup shouts "You can't handle the TRUTH!" as the signature line of that movie. The "TRUTH" is of course the narrow world view held by the USMC Colonel and that the character deserves respect because he has spoken the "TRUTH." [the judge of the court tells him off on the "respect" part]

Leading up to that signature line are two setup lines: "We save lives." -and- "It's as simple as that."

Robeson has used both those lines several times in past messages. Add to this Robeson accessing Role Playing Game websites that involve "tough" military characters and an attempt to humiliate another by name association.. .

> Why he persists in the face of this, we can only guess. I'd be ashamed
>to show my face in this NG if my shortcomings were so frequent and so glaring
as
>his.

In the movie cited, the USMC colonel was a megalomaniac who not only dishonorred the USMC but was guilty of directed murder. What is interesting from a psychological point of view is Robeson's continued use of the movie's lines as if they were honorable and respectful. Strange.

> Especially if I had been the source of my own undoing! What a putz he
>is!

That's what it appears that Robeson is doing.

>>Kindly blow it out your ass, Len.
>
> Can you tell which end is which, Dave? Seems to me that he probably
>needs to floss after each episode of NG flatulence.

I'll leave those two characters' lines as they are.

They indicate that the US amateur radio service has
some members that do not reflect credit "on the
service" nor do they inspire or attract others.

As they say in the USMC, "Temper Fry."

In article <3BA171BB.3AFC7091@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>I'm sick to death of your negative portrayals of radio amateurs in
>emergency situations.

Heil is angry that I do not over-exaggerate amateur
radio good deeds. There are many of those but...

>QST is loaded with stories of how amateur radio
>is used in emergency situations.

The NON-amateur radio press is NOT "loaded" with
such stories. Go to any wire service covering this
dastardly attack on America, go to any newspaper
and find the story. It is a vanishing percentage of all
the news, so small that is does not seem to exist..

It is fairly clear that the ARRL, while an excellent
organization to help radio amateur members, is NOT
a news medium that reaches the general public.
Neither is the ARRL a journalism service...except to
other radio amateurs. Think about that.

If the ARRL was a true radio news journal organization
it would cover the activities of all the professionals who
exist and do do the REAL emergencies every day. It
seldom mentions the professionals.

Years and years of self-promotion of amateur radio are
bound to skew the thinking of those whose major
radio news input is QST and the ARRL publications.

> I'm certain that most of us are more
>concerned with the welfare of real people in a tragic situation than we
>are with your self-important analysis of amateur radio. Kindly blow it
>out your ass, Len.

Heil is not certain, he is only looking for a chance to
insult, impugn, depreciate another on the basis for not
achieving his expected reverence, honor, and respect
from his imperial postings in years past.

It is shameful that Heil uses the events of the Attack on
America of day 9-11 as a cover to insult others for his
personal desires. Shame.

>Col. Jessup makes many mistakes when he is enraged.

Ooops...Still "close enough for government work".

Still does not negate the fact that you are, once again, WRONG.

>Jim Kelley tried to make a case of amateur radio being "prominently"
mentioned. They are not so prominently featured.

Hmmmm....There are 10 numbered line items, and the Amateur Radio Service is
the ONLY radio service SPECIFICALLY named.

THAT is not PROMINENT?

>At the "helm" (metaphorical) of the California ACS is the appointed head of
the ACS. It is on the ACS website.

No..the "Captain" (metaphorical) is the appointed head. The helm is
manned by the crew.

And it still does not negate the fact taht you were AGAIN wrong.

>What must be at the heart of Col. Jessup's rage is that the ACS is not made
up entirely of radio amateurs...and the colonel has nothing to do with it.

I have no rage, Lennie. Yo do. You have been proven wrong again.

I don't care that ACS is not made up entirely of Amateurs. That's NOT the
purpose of the program.

The purpose of the program is to integrate all those assets.

Unfortunately "professional" communicators (9-1-1 staffers) have little
knowledge of the capabilities and limitations of other radio services.

Amateurs, on the other hand, by thier inherent interest in radio on the
whole can bring a lot of versatility to the table.

Hence Amateur Radio's PROMINENT plae in the ACS charter.

>Personal insults do not make Col. Jessup's case nor anything positive about US
amateur radio.

We're not talking about Amatuer Radio. We are talking about YOU.

>Feel free to post the entirety of the California ACS documentation and let others determine which radio service is the "most prominent" or "at the helm."

They can follow the links like I did.

Amateur Radio is specifically named in2 of 10 line items. No other radio service is so named.

> The word "putz" is Yiddish colloquialism for the anus.

Yes, it is. And therefore a reasonable application when used as an adjective for Leonard H. Anderson.

>In REAL emergencies, such as the Northridge Earthquake of 1994, the REAL emergency communicators are organized, trained, and drilled as an integrated whole, have the appropriate equipment to do the job.

Utilizing the charter of an organization that relies on Amatuer Radio, both as a spectrum resource and as a resource for operators.

>In the January 17, 1994, emergency in the Los Angeles area....(SNIP)

Yes, Lennie...recite for us one more time how you never saw any reference to Amateur Radio on TV during this event and how that somehow vindicates your rants.

It still does not negate the fact taht Amateurs WERE there, DID contribute, and CONTINUE to do so.

>It seems to come as some kind of surprise to many radio amateurs that there are professionals that use radio effectively even though some of them are civil service
employees.

That's only your opinion...a vilely jaded one at that.

>Real flexibility and functionality comes about through planning, organization and constant training.

Yes, it does...that's why NYC ARES and RACES have been part and parcel of thier planning and organization for decades...

....Just as your "pet" ACS includes Amateurs, Lennie.....?!?!

>Real emergencies are not "Field Day" events in the local park nor do they involve point collection contests.

No..they are not. Your point is?

Are you trying to suggest that by adding an element of fun and competition that the experience of setting up radio stations in austere conditions somehow negates it's usefulness...?!?!

>My commercial first class radiotelephone operator license was granted before the colonel was born.

Your license no longer exists. Why do you? And your GROL "expired", remember...?!?!

>The colonel seems confused as to which service he is in. The USMC served the colonel his discharge but the US amateur radio service is NOT a military service at all.

Seems you are the one confused, Sir Geritol...No one, except YOU has mentioned "military service", let alone the Marine Corps, in any of these posts.

This is, of course, one of your favorite diversions.

Didn't work. Try again, Your Putziness.

>Amateur radio is a radio activity done for a non-pecuniary interst. It is an avocation.

It is a radio SERVICE that may be participated in as an avocation.

>Absolutely. Myself and the rest of the citizens of the attacked USA...with the exception of a few angry, confused and ignorant radio amateurs in this newsgroup.

Quoted out of context..as usual. But yes, many Amateurs herein are angry and confused...but NOT about our place in the scheme of things as they pertain to emergency communications in the United States.

As for ignorant, well, all I can say is that there is ONE particular participant in this NG who refuses to educare himself as to on-going day-to-day Amateur Radio matters and obtain a license and PARTICIPATE in Amatuer Radio...THAT is the ignorant one.

Oooops..THAT would be YOU, Your Putziness!

>
> The "TRUTH" as Robeson always uses it is simply that
> opinion held by Robeson.

And then Lennie goes on to make satirical snippets from a fictional movie.

All to divert from the FACT that he was, again, caught with his virtual
britches down.

Lennie asserts that his beloved "ACS" is devoid of Amateur radio.

A quick trip to the web not only proves him wrong, but in two out of 10
line items, Amatuer Radio is specifically mentioned.

Wrong again, so he delves into lies and "obfuscation".

Soooooo Lenniesque!

>Let's look at "TRUTH" and some lines in the closing scenes of
>the motion picture "A Few Good Men,"

Let's not, Lennie. It's not germane. The "subject" was your assertions of
NON-Amateur participation in emergency services activities, especially your
vbeloved and oft cited "ACS".

You were wrong. Period.

>As they say in the USMC, "Temper Fry."

And again.....

Thanks for your colorful diversion from your errors, Lennie, but that's
all they were...diversions.

You were wrong. You continue to BE wrong, and until you do something to
get involved and participate in the programs on which you insist on offering
(erroneous) comment, you will continue to be wrong.

Excuse me...IGNORANT.

It really is THAT simple

Why? The discussion is about amateur radio. Besides, "limited potenital" is a purely subjective term.
>
>>> One can exchange RSTs and WX and
>>> very limited communications of a personal nature using
>>> morse but anything else requires a lengthy (far longer than
>>> voice or data) session to exchange information.

>
>Really? :-)

Yes. How fast can you block-print or write longhand, Len?
>
>Is that why commercial communications shifted over to tele-
>printer terminals running at 60 WPM before WW2?

That's why that conversion began way back then, yes. It took decades to replace all landline Morse in this country, though.

>Teleprinters can operate continuously for hours without
>making a single mistake.

Under good conditions, yes. That's another reason why commercial services began replacing human operators with machines.

Of course the biggest reason was cost.

>Is that also true of humans?

Yup. Skilled ones.
>
>>> The FCC does not declare OOK CW mode as a required

How is that "inconsistent with the regulations"?

>there is NO manual operating test element
>for all other US amateur modes.

Neither is there a treaty requirement for same.
>
>>The FCC still requires the test only because the international
>>treaty/regulation requires it.
>
>Not quite right.

No, it's exactly right. FCC says so. They define what is correct in this area, remember?

> S25.5 is a recommendation of the ITU-R.
>The US administration is honor-bound to adhere to the
>ITU-R recommendations. There is NO enforcement body
>to "require" any recommendation other than voluntary
>adherence to such recommendations.

So? What's your alternative solution? Should the FCC simply ignore S25.5? Is that what you want?
>
>Japan is a member nation of the ITU. Japan has thousands
>of licensees who have obtained amateur privileges below
>30 MHz without taking any morse code test.

Would you like the FCC to create a license class with privileges equivalent to the JA 4th class license?

The Japanese get around S25.5 with the following argument: They claim that ITU-R, and particularly S25.5, exist to prevent interference between services and between member nations' radio users.

The Japanese 4th class license only allows its licensees to use HF frequencies that are worldwide exclusive radio amateur (and it does not allow all of those). Thus, a 4th classer operating within the allowed bands cannot interfere with any other service - only other hams.

To avoid interference with hams of other nations, 4th classers are allowed to use only very low power - 5 watts output, last time I checked. Because Japan is an island nation, (so the reasoning goes), foreign hams are not going to have problems from 5 watt JAs.

What's your solution for the USA?
>

Actually, there were 3 ships that were sisters to Titanic.
>
>Oh, and 1912 was 89 years ago and the most-used transmitter
>type in that time was spark (the original Titanic had such a
>transmitter). Spark was declared illegal before WW2 began.

For hams. It wasn't outlawed for marine use until much later. And it was
outlawed for hams only when it wasn't used by hams anymore.

>'phone
>> it's "My name is Jim - that's Juliett India Mike, Jim".
>>
>>
Good points, Ryan. But not mentioning the name itself can be confusing. For
example, my name phoneticizes to "Juliett India Mike".

And compare the following:

"Name is Juliett India Mike" (24 times per minute at 120 wpm talking rate)

"OP JIM" (24 times per minute at about 25 wpm)

5 words (9 syllables) on voice vs. 5 letters in Morse.

Yes, we should all know and use the "official" phonetics. I do!

73 from November Too Echo Yankee

It is clear that the word voluntary has been taken out of context
here.

In this case, it simply means that one seeks to be a member of this
service. No one is compelled to get a license.

Yes. The primary problem surrounding the radical muslim movement is ignorance coupled with gross mistreatment of the Muslim masses by their own religious leaders who are anything but religious. It's just another example of using religion for purposes anything but truly religious. The parallel with the Spanish Inquisition is correct.

If the masses of ordinary Muslims who follow those leaders who are actually more in accord with Satan than Allah would just read their own Koran and filter out the Mullah's haranguing, there would be much less of this.

> >We need to be careful not to allow our anger to be redirected where it

Yes. But there are many followers of the radicals within out borders who may become a serious security problem as this plays out. One must be aware of his surroundings.

No thinking person would consign all Arabic persons to the same fire pit to which we shall shortly consign those who did these dastardly acts. But one must ever be vigilant. Unfortunately it seems we have not been.

I looked up the Century IX.XCII quatrain where "cite' neufue" is
thought to refer to New York City under attack - pretty interesting.

"The king will want to enter the new city, they will come to subdue
it through its enemies. A captive, falsely faced to speak and act.
The king to be outside he will stay far from the enemy."

New York City is certainly subdued through its enemies. The captive
airplanes, facing the wrong way, certainly made a statement through
disasterous actions. During his return from Florida, Bush certainly
stayed far from the enemy.

Dave I can't imagine why *anyone* here is still even acknowledging
Lennie the Freak. His entire purpose here is to denigrate ham radio to
the maximum extent possible using whatever methodology he can dream up
on the fly.
No one ever said that ham radio was primary communications for anything
but ham radio, but only a fool of Andesonian dimensions could fail to
understand that communications assets are communications assets,
wherever or whatever they are. And the fact that *knowledgable*
emergency managers everywhere know that ham radio may well be a vital
asset at any given time.

The Great Loose One hates that with every fiber of his being, and will
spend whatever time he has remaining to work to kill the hated Ham
Satan. How so very radical of him.

Yeah I know about Dow Chemical in Midland Michigan. Now think about a jumbo jet, leaving Metro Airport, making the short 10 minute flight to Monroe just to the south of us in Detroit, and crashing in to the Fermi II nuke power plant located on the shore of the lake. We would be glowing in the dark for the next 10,000 years in lower Michigan, and everything along the shores of Lake Erie would be contaminated. They don't have to crack the reactor containment vessel, or wreck the reactor controls, just bust open the storage building where the spend fuel rods are stored would be enough.

There are far to many dangerous targets on the ground that can kills thousands by simply crashing a big jet in to them like the WTC towers in NY city.

Good points, all of them.
>
> We pay our emergency services people to do a job; lets do all we can to

> some unknown quantity of volunteers.

Problem is, there is no practical way to equip our emergency services
for every possible disaster in every possible location. Resources are
limited, as you said. Do you think that the entire USA can be equipped
with reliable cell coverage?

The fact remains that amateur radio operators are providing important
emergency communications services at the Pentagon and the WTC sites.

Emergency services personnel are not totally dependent on hams, of course. But neither are hams superfluous to the efforts.

--

A few months ago, a six year old child got separated from his/her group while hiking in a wooded recreation area. (I think it was a state park in Arkansas, but don't fret about the details, they aren't the point). Search parties were quickly organized, and communications was needed because the area to be searched was large. Cell phones were all but useless in that hilly, remote area, and did not offer the kind of communications needed anyway. Hams provided communications services for the duration of the search, and fortunately the child was found in good condition.

Where were the "pros"? On the job, of course, but there simply weren't enough of them for that unusual emergency, so hams helped out.

> > phones were evident on everyone's TV screens and
> > in use all over lower Manhattan.

Much of the cell phone infrastructure of lower Manhattan was destroyed
when the towers collapsed. However, much of the nearby cell
infrastructure survives and continues to function.

It should be realized that the current population of Manhattan today
is but a fraction of what it would be on a typical weekday, so the
demands on the cellphone systems are probably much less than normal.
The cell infrastructure in a place like Manhattan is extensive - yet
the Red Cross and others are relying on hams for communications.

The fact that TV images show lots of people with cellphones to their
ears does not mean that they are all functioning as intended.
> >
> > At least seven (perhaps eight) victims IN the aircraft

The media uses the term "cellphone" but in fact we do not know if
actual cellphones were used, or the "airphones" installed in most
airliners. Regardless of that detail, what significance does it have
to amateur radio?

> >Cellphones "did not go out" before

> > cutaway on day Two or day Three.

Agreed. Perhaps they will. Amateur Radio is routinely underpublicized
and misrepresented by the mainstream media.
> >
> > Seven years ago the Northridge Earthquake happened
> > here, knocking out ALL primary power to about 10

For how long? We get power failures here quite often, 'specially in
bad weather. Most are short lived (an hour or two). Some last for as
long as a day.

> > Where was all the "emergency

So what's your solution, Len?
>
> I'm sick to death of your negative portrayals of radio amateurs in
> emergency situations.

You have to understand where LHA is coming from, Dave.

> QST is loaded with stories of how amateur radio
> is used in emergency situations.

LHA doesn't read QST.

> I'm certain that most of us are more
> concerned with the welfare of real people in a tragic situation than we
> are with your self-important analysis of amateur radio.

I think you miss what's really going on here, Dave.

LHA posts here for reasons known only to himself. He obviously thinks he is some sort of communications expert or guru. Trouble is, his messages are often worded in such a way as to obscure the meaning. Like many gurus, he speaks "down" to those who bother to listen, and blames them for imperfectly understanding his words. And since he thinks he's an expert on communications, he cannot admit that perhaps his methods and wordings are not effective.

LHA's words usually require translation to plain English. Here is a simple plain English translation of his words above, with the filler and bluster removed:

"I watched a lot of TV the past few days and didn't see anything about ham radio operators doing emergency communications at WTC. Didn't see any at the Northridge earthquake seven years ago, either. It would be great if the mainstream media featured more on the great job hams do helping out with communications during emergencies."

See? Once the "noise" is filtered out, the "signal" is OK.

Of course LHA posts so much here that we will all have to pitch in and help with the translations.

Cec,
Doesn't Nostradamus also speak of fire from the sky over the "New City"
in one of his quatrains? The prophesy may have come to pass, although
most people thought this was to happen in 1994 via a nucleur weapon.
Someone couldn't read their calendar?

I would be careful accepting advice from this news group.
It seems likely to me that he may have a very real claim to
that email address.
If it were my decision, I'd just change email addresses. It
might be cheaper than defending myself in court. Not to
mention, the confusion this could cause in the future (do
you really want people mistakely sending emails to some
other address starting with 'ww7a', knowing they will likely
be going to someone who may have a grudge against you?
Life is just to short to worry about details like this.

Watch yourself! The last I heard over 200 fire, police etc. personnel are missing when the two towers collapsed. I would hate for you to end up that way.

I hope Bush has been reviewing those nuke release codes. I think the time has come to show some dirty buggers what "Terrorism" really is when there is no place to hide from our bomb. Enough is enough, press that big red button and lets see if it really works!

People think it's that rich Arab terrorist. I don't think it is. My money is on Iraq. They have access to trained pilots, both military and civilian, who could have flown those jets easy. Given their past ability to get material for their military programs secretly, planing the kind of attack we saw today would not be beyond them.

Iraq also has a bone to pick with Bush, the older one, over the Gulf War. That would explain the attack on the Pentagon, and the apparent attempt to crash a jet on Camp David. That would please the Iraqi leadership to no end if they could kill the son, now our current president, of the former US president whose military still occupies Iraqi soil and beat the crap out of the Iraqi army.

Getting good press is not the object. The object is to perform a
service to others. That you have not personally seen efforts by radio
amateurs does not negate the good that they do.

> It is fairly clear that the ARRL, while an excellent
> organization to help radio amateur members, is NOT

>>>communications"/
>>
>>Please point out any other radio communication service that
>>uses morse code as a primary mode.
>
>Why? The discussion is about amateur radio. Besides, "limited potenital" is a
>purely subjective term.

Is any other radio service requiring morse code mode
communications? If so, what are the percentages of
such radio services relative to all of the rest of the
radio world?

If morse code had any "potential" as a mode, it is not
explained other than "it was the first mode in all radio"
and must be kept for "traditional" reasons. That includes
amateur radio, especially for the license examinations.

>>>Again, not true. Operators with decent skills can converse at
>>>effective speeds close to that of voice radio.
>>
>>Tsk, tsk. Untrue and you know know it.
>
>Nope. True and I've done it.

Unverified claim. Braggadoccio.

Please indicate the actual test conditions where the speed
and comprehension was tested in reference to voice
communications carrying the same information.

>Why do you use last names here, Len?

My apologies. I was uncertain whether or not your
surname had been changed to "N2EY."

>>I can converse by voice at rates from 180 to 240 WPM
>>and be understood by another English-language
>>understanding, normal hearing ability human.

Please indicate the test conditions where you ascertained
that "most people" cannot do this. Please also document
the relative percentage of "most people" to all people.

>>Can the
>>very skilled morse operators reach intelligible rates
>>of 100 WPM?
>>
>With abbreviations and prosigns, yes.

Sorry, but that is unverified except as to a personal claim.

While I've known two long-time radio amateurs who were
"speed freaks" (their terminology) at telegraphy, only a
third amateur (Gene Hubbell, SK, then W9ERU, later
W7DI) was actually tested at 65 WPM...five-character
groups, no clear language or prosigns.

It should be pointed out that N2EY/Miccolis states
"very skilled morse operators." That is clearly NOT
"most people."

>Yes. How fast can you block-print or write longhand, Len?

Block-print at about a 40 WPM rate. Intelligibly. By
informal testing.

However, an individual ability is irrelevant here...except, of
course, in arguments of promoting morse code.

>>Is that why commercial communications shifted over to tele-
>>printer terminals running at 60 WPM before WW2?
>
>That's why that conversion began way back then, yes. It took decades to
>replace all landline Morse in this country, though.

The conversion to teleprinting was already beginning in
the year 1900. Standardization in international teleprinting
telegraphy did not come about until about the late 1920s.

>>Teleprinters can operate continuously for hours without
>>making a single mistake.
>
>Under good conditions, yes.

Under "bad" conditions. I've seen hundreds of teleprinters
running continuously for a month without breakdown or
making any mistake due to the teleprinters themselves..

>That's another reason why commercial services
>began replacing human operators with machines.

"Human operators" were not replaced. Operator skills
were shifted. It made no sense to employ specialists
at both ends of a communications link who could not
do 60 WPM throughput for days at a time. The purpose
of communications was NOT in the mode but the
information to be communicated. Teleprinter
communications could be prepared off-line and then
sent by non-morse-code-specialists with a written
copy of the communication available at each end.

>>>> The FCC does not declare OOK CW mode as a required
>>>> one to be used by any amateur...yet international
>>>> regulations require testing. That is inconsistent with the
>>>> regulations.
>>>
>>>You have it exactly backwards, Len.
>>
>>Not at all, Jim.
>
>Yes it is, Len.

Error. Neither the whole of S25 nor the US amateur radio
regulations mandate that manual telegraphy be used over
any other mode.

>> Unless there has been a new R&O in the
>>last few days, the FCC allows any allocated mode use to
>>be at the option of individual amateur licensees.
>
>That's correct.

It also makes N2EY/Miccolis' statement of "backwardness"
incorrect.

>>The inconsistency comes from Part 97 giving the option for
>>use of any allocated mode...yet the license test for a
>>below-30-MHz-privilege class requires the passing of a
>>single mode...
>
>How is that "inconsistent with the regulations"?

It makes no sense to test for a singular mode when
all other allocated modes are optional for any
licensee.

>>there is NO manual operating test element
>>for all other US amateur modes.
>
>Neither is there a treaty requirement for same.

Then explain the logical "reasons" for the retention of
S25.5.

>>>The FCC still requires the test only because the international
>>>treaty/regulation requires it.
>>
>>Not quite right.
>
>No, it's exactly right. FCC says so. They define what is correct in this
>area, remember?

Incorrect, NOT "exactly right." The FCC stated, in 1990 and
1999, that the morse code test is not considerred relevant
to their regulatory purpose in granting amateur radio licenses.
Please see the FULL statements in 90-53 and 99-412.

>> S25.5 is a recommendation of the ITU-R.
>>The US administration is honor-bound to adhere to the
>>ITU-R recommendations. There is NO enforcement body
>>to "require" any recommendation other than voluntary
>>adherence to such recommendations.
>
>So? What's your alternative solution?

Elimination of the code test requirement for a license as
stated in ITU-R S25.5.

>What's your solution for the USA?

Removal of the ITU-R code test recommendation stated
in S25.5 would allow all adminstrations to include or
exclude a code test.

Further, the ITU-R could pass a recommendation that all
adminstrations' previously code-tested licensees be
issued the highest medal of honor of each adminstration
in recognition of their noble accomplishments of keeping
morse code skills. That should partly offset the rage and
anger of all those morsemen who insist that all newcomers
have to pass a code test just as they had to...

>Actually, there were 3 ships that were sisters to Titanic.

Why is that important? Rec.maritime.long.ago.heroes
newsgroup is far down the hall to the left.

Morsemen manning maritime radio rooms aren't needed
for emergencies at sea. The Real maritime communicators
have the Global Maritime Distress and Disaster automatic
communications radios now.

>For hams. It wasn't outlawed for marine use until much later. And it was
>outlawed for hams only when it wasn't used by hams anymore.

WHAT?!? "Hams didn't use spark anymore?!?" Tsk, tsk.

Spark was the very first amateur transmitter thingy. I would
have thought that "tradition" would mandate continued use
of spark and spark technology forever!

One learns something every day from Those That Were There.

In article <9nt4dd$jk1$0@208.206.142.96>, Dick Carroll <dixie@townsqr.com>
writes:

> Dave I can't imagine why *anyone* here is still even acknowledging
>Lennie the Freak.

Amazing, isn't it? :-)

>His entire purpose here is to denigrate ham radio to
>the maximum extent possible using whatever methodology he can dream up
>on the fly.

No, it is to advocate the elimination of the morse code test
from any amateur radio license examination.

Amateur radio seems like a fun hobby, interesting and
challenging in and of itself. The exception is all those
self-important whizzers who think that amateur radio is a
Way Of Life or some kind of military service organized as
a morse code emergency communications service.

> No one ever said that ham radio was primary communications for anything
>but ham radio,

Bzzt! Wrong. Several in here have stressed the "service"
aspect of amateur radio (as if it were some quasi-military
organization) and insist the whole purpose of amateur radio
was to provide emergency communications.

Carroll is invited to pursue the what and who in Google over
the last week. Should be no problem to find them. :-)

>...but only a fool of Andesonian dimensions could fail to
>understand that communications assets are communications assets,
>wherever or whatever they are.

"Carol" is almost right, there...but has never really acknowledged
the communications assets in the non-amateur radio world that
have existed for two decades. He has continued to stress the
alleged "importance of CW (manual telegraphy)" based on his
own desires/prejudices.

>And the fact that *knowledgable*
>emergency managers everywhere know that ham radio may well be a vital
>asset at any given time.

This is a general statement without basis or reference.

It is still a part of the mantra that is constantly muttered by those who sit behind their radios dreaming of doing heroic acts (and winning immortal recognition) such as (as stated by another) "being the radio operator on the Titanic."

Instead of trying to promote the enjoyment of amateur radio as a pleasureable hobby, Carroll and some others keep insisting on its "vital need" for the nation and especially, on the "vital need to be proficient in manual telegraphy" as a part of the "tradition" of amateur radio. At times Carroll and others completely ignore the vast, existing infrastructure of modern communications which are the real backbone of true emergency communications.

This is not to disparage health-and-welfare communications services provided by amateurs. Indeed, that is a significant morale booster and emotional salvation for victims and loved ones...but health-and-welfare communications is not the prime function of true emergency communications.

Further, the general public seems unaware that health-and-welfare messaging by radio amateurs exists. The major effort of health-and-welfare "emergency" communications is limited to publicity within amateur organizations. In other words, the amateurs are so busy high-fiving each other and exchanging medals of valorious "service" that they forget who is the target of health-and-welfare support. It would seem that the "health-and-welfare" communications has become just a self-congratulatory service only for themselves.

Everyone should feel good about what they do, but some have extended their self-importance in a hobby activity far beyond reasonable limits.

Now unwrap yourself from all that quasi-patriotic bunting (it must be choking you) and let's get back to your explanations on why the morse code test must always be kept as part of an amateur radio test. :-)

He has no claim to that email address whatsoever. Just because the combination of letters and numbers happens to be his amateur call is immaterial. WW7A applies to WW7A's ham license only, outside of ham radio it means nothing. zz4@webtv.net (internet-terminal zz4) stated he has had this email id for several years. Your name is Steve, but you have no exclusive rights to that name as evident by the thousands of other people named Steve. I could apply for an email address of steve@hotmail.com and as long as there is no one else using that id I have every right to use it even if you might approve. Do a search and I am sure you will find a number of ids of steve@xxxx.xxx, are you going to tell all those users to stop using your identity?

It's a fake, pure and simple. It wasn't even written by Mr. N.

Is this your proof that "virtually everyone is able to pass a 5WPM code test? One needn't limit himself to a Tech license in order to be "happy with VHF/UHF".

"Prominent" is the word I used, and is a correct description. It is you who continues to be incorrect. Need I post the entire text in order to get you to read it? If you did read it, you might be able to more accurately characterize it. Even better, if you actually participated, you might even have some idea of what you are talking about. Just a thought.

>
>Heil is angry because you, a non-entity in the world of amateur radio,
>persist in belittling accomplishments of radio amateurs.

The "belittling" is subjective on Heil's part. I do not glorify
the statements seen in QST or the ARRL nor praise them
to the skies...and that is taken as "belittling" all radio
amateurs...assuming that Heil represents all radio amateurs.

>This time,
>you've even used a national tragedy in an effort to make a point.

No. I did not wrap myself in quasi-patriotic bunting and
equate my opinions to the Attack On America. I've held
my opinions long before this week, stated them in here..

Heil is angry because He tried to equate His opinions with
the Attack On America, got caught at it, and persists in
trying to denounce me as an "enemy of the state" because
I do not believe as He does.

>Getting good press is not the object.

Ah, so...if no other news medium covers "emergency
communications" by radio amateurs but the ARRL states
it, I should only believe what the ARRL says?

>The object is to perform a service to others.

That does not require an amateur radio license.

Those with an amateur radio license are also granted to
call non-hams "non-entities?" Yes, according to Heil.

>That you have not personally seen efforts by radio
>amateurs does not negate the good that they do.

I've never "negated any good that [radio amateurs] do."

I said that I've not seen any non-ham media reference to
"emergency communications" by radio amateurs.

>Heil is quite certain in his concern for victims and their loved ones.

Concern for victims has no connection with discussing
the organization, planning, training of true emergency
communications nor the integration of all the various
radio services in communities.

However, such statements as Heil's are almost de rigeur
implications of being unpatriotic and unsympathetic to
victims when Heil's opinions on other matters are not
accepted.

>Heil is also quite sincere in his suggestion that you blow it out your
>ass.

Suggestion noted...and not accepted.

>> It is shameful that Heil uses the events of the Attack on
>> America of day 9-11 as a cover to insult others for his

>There aren't any others, Len.

Heil isn't done in here yet...

>There's only a bitter old geezer out
>California way who used this monstrous event in order to attempt a slam
>of public service work in amateur radio.

What "slamming of public service work in amateur radio?"

I wrote that all the other news media (except the amateur
radio news media) is silent on the public service works of
amateur radio during the Attack On America.

>You're a sad sack in more than one way.

I'm sure that Heil thinks so. Pity though, all those "non-
entities" without amateur radio licenses who have
perished on those aircraft and in the targets...all those
"non-entities" of the NYPD or FDNY who perished in the
building collapses and the many more PD and FD and
government workers still removing rubble, trying to find
victims...many from other cities and other states...all
those "non-entities" without ham licenses who
organized on the spot to handle an unforseen emergency,
got the earthmovers, set up the medical aid stations and
carried the litters, pushed the gurneys. Aid all over, even

heroism, yet are "non-entities" in Heil's mind because they have no amateur radio licenses.

Maybe Heil is correct. "Non-entitites" don't know about anything unless they have the magical amateur radio license grant.

Perhaps the ARRL should post something about "non-entities" not suffering, not doing anything during the Attack On America. That would make it "official."

LHA

Impossible...so many hams say that cell phones quit
working during emergencies. How can you go against
such mass opinion?

>It should be realized that the current population of Manhattan today
>is but a fraction of what it would be on a typical weekday, so the
>demands on the cellphone systems are probably much less than normal.
>The cell infrastructure in a place like Manhattan is extensive - yet
>the Red Cross and others are relying on hams for communications.

Yes, those "others" (PD, FD, government personnel) are seen
relying on Red Cross amateur radio communications. Of
course.

>The fact that TV images show lots of people with cellphones to their
>ears does not mean that they are all functioning as intended.

Of course not. All "non-entities" walk around holding
cell phones to their ears without communicating.
Their mouths are moving because they are pretending
to talk.

>The media uses the term "cellphone" but in fact we do not know if
>actual cellphones were used, or the "airphones" installed in most
>airliners. Regardless of that detail, what significance does it have
>to amateur radio?

According to so many hams stating in here, all cell phones
cease operating during emergencies. Are you going against
popular opinion?

>How do you know, Len? Are you able to watch all of those six networks
>for the entire time you describe, and read/post here simultaneously?
>Amazing.

Correction noted...we have only four TV sets here...and we
went to the market, I cut the grass, talked with my neighbors

a bit, we read the newspaper, cooked meals, all while
multi-tasking watching TV and simultaneously reading only
this one singular newsgroup. Sure.

>> > It would be a boon to all the amateurs
>> > "emergency radio" proponents if some network could
>> > show that. It would be a good "human interest"
>> > cutaway on day Two or day Three.
>
>Agreed. Perhaps they will. Amateur Radio is routinely underpublicized
>and misrepresented by the mainstream media.

Not my fault. "Non-entities" (without amateur radio licenses)
can't do anything or know anything. "Entities" have told me so.

>> > Seven years ago the Northridge Earthquake happened
>> > here, knocking out ALL primary power to about 10
>> > million subscribers.
>
>For how long? We get power failures here quite often, 'specially in
>bad weather. Most are short lived (an hour or two). Some last for as
>long as a day.

About four hours before a Black Start could begin. Power
restoration to undamaged neighborhoods wasn't complete
until about 20 hours later. It was out here for about 10 hours.

Why do you ask? Isn't it true that "CW can get through
when other modes fail?"

>> > Where was all the "emergency
>> > communications" by radio amateurs then?
>
>It was there, you just missed it.

Of course...long after the fact QST reported it. That makes
it "official."

>> >TV was on
>> > the spot then along with all the professionals. FEMA
>> > had their roll-away terminals for video health and welfare
>> > transmissions and that was shown on TV. No hams seen.
>
>What's your point, Len?

Tsk, tsk. I thought all "entities" were attentive, comprehending
entities. Heavens above, us "non-entities" can't take you
through a line-by-line, word-by-word explanation of what I
wrote...you may not comprehend the explanateion.

>So what's your solution, Len?

Non-entities cannot have solutions since they know nothing
(according to another entity). I will await the "solutions" as

put forth in QST and publications of the ARRL. Professionals
need amateurs to work out their problems, don't they?

>You have to understand where LHA is coming from, Dave.

I come from Illinois, a state in the United States of America.
Why ask?

>LHA doesn't read QST.

Entities seem to know exactly what is done by non-entities.
That is the most notable accomplishment of passing a ham
test and I stand in awe of this ability.

>I think you miss what's really going on here, Dave.

Impossible. Dave knows exactly what is going on,
according to Dave.

>
>LHA posts here for reasons known only to himself. He obviously thinks
>he is some sort of communications expert or guru.

Incorrect. Knowing more about the rest of the radio world
than an amateur does not permit titles such as "expert" or
"guru." Those terms are used only by Entities who have
highest-class amateur radio licenses.

>Of course LHA posts so much here that we will all have to pitch in and
>help with the translations.

Naturally...only Entities are capable of understanding anything.
They've proved that with the ability to copy morse code at
high rates.

The French physician and astrologer Nostradamus (1503-1566) penned numerous quatrains populated by obscure imagery that the credulous have ever after attempted to fit to the events of their times. These predictions can often ring somewhat true in that the images employed are so general they can be found in almost every event of import, but by the same token, the prophecies are never a dead-on fit because the wordings are far too general. Not that this stops anyone from believing in them; our society's need for mysticism runs far too deep to ever allow for that.

>such mass opinion?

Translation from LHAspeak to English:

"Either all cellphones stop working in all emergencies or none of them stop
working in any emergency".

The answer is simple: In some emergency situations, cellphones work and in
others they don't. The point some hams try to make is that cellphones cannot be
relied upon to work in all emergency situations.

From direct experience I know that simple volume can overwhelm the cellphone
system.
>

(This is a rare example of LHA actually using plain English and also giving requested information)
>
>Why do you ask?

Because the time span has a big impact on the severity of the emergency. Less than 24 hours without power isn't a big deal unless you have some critical things going on, or have to face things like looting and breakdown of the social order.

Many people here in EPA were without power for a lot longer after Hurricane Floyd.

> Isn't it true that "CW can get through
>when other modes fail?"
>
Translation from LHAspeak to English:

"LHA senses that the loss of power during the 'quake cited may not have been such a big deal, and must deflect the discussion away from careful examination of the facts by a routine, off-the-shelf attack at Morse code"

>>> > Where was all the "emergency
>>> > communications" by radio amateurs then?
>>
>>It was there, you just missed it.

Most states in the region, and the rest of the world are not too keen on the US taking it upon themselves to remove the leaders of soverign countries. Leaves a real nasty in their mouthes.

Why would anyone who is 100% satisfied with VHF/UHF-only privileges
bother to upgrade? I know lots of techs who won't upgrade even after
the Morse code requirement is dropped.

No argument but it would be damn wise to recognize that Islam does recognize sanctuary and the responsibility of a host to a guest exceeding the resposibility to one's family. Idi Amin at last count was sunning himself in Saudi Arabia so sheltering Ben Laden in an Afghanistan run by some pretty primitive Muslims (not a lot different than being run by Southern Baptists, eh?) is not all that surprising.

Nor is it restricted to Islam. There is a rather confusing story in Genesis about a man in Sodom who offered his virgin daughters to the crowd demanding to get to his guest. As good an interpretation as any is that it demonstrated the evil of Sodom and the righteousness of the host.

The interesting scenario is that we are able to prove to the Taliban that ben Laden crapped in the nest, not exactly guest-like behavior. If they are all that Islamic, all we would get is his head; if they are not, well, they are accessories after the fact.

I admit to being afraid we are going to do something incredibly stupid

As i heard someone else state, a*h*s' have a purpose, too. All
I am saying is Amateur Radio could not hold my interest. Its boring.

I had a better time in the old days of 11 meters. Yea, I have witnessed amateur telelvision and sattelite comms. Boring. I would rather have internet videoconferencing. Packet radio. Sheesh. You guys are all so stiff-necked and rule-ridden it takes all the fun out of life. I can not see why amateur radio is put on a high pedestal for the few that are indulgent enough to tolerate it. You can have it. I felt it was time to move on, as I have never been one to live in the past. My old horse is out of its misery.

The sad truth is that Bin Laden and Co. are about as as truly Islamic
as the old Soviet Union was purely Communist. Somehow truth loses out to
Agenda, personal viewpoint and pure old human cussedness, to say nothing
about old fashioned evil.

>
> I admit to being afraid we are going to do something incredibly stupid

At this point in the game even that would be preferable to doing nothing. Somehwhere along the way it becomes time to lash out strongly in the general direction of the jackels and let the blow land whereever it strikes, rightly or wrongly. At that, maybe the respect gained would equal whatever wrong done.

Some times the innocents too close to the targets become unintended consequences, too. Their soulmates had no pity on the innocents in New York.

This is exactly what I have tried to drive home to the Hams of the
USA. Ham Radio is no longer of value in emergency situations now that
many unlicensed people can carry cellular telephones...
BUT
If there is ever to be a full scale war Ham Radio will be again very
valuable if it can create a cadre of trained people who are modern
communications tewchnicians. For this to happen Ham Radio must again
be an educational technical hobby that promotes the learning of modern
communications technology.
> >
> > Someone made a comment about a 20 meter net assisting in collecting
> > blood. Think about what a waste of air time that was. And that was
> > apparently the high point.

IMHO they have all the blood they need. Unfortunately there are very
few suurvivors in need of blood at present. What is needed is not
blood but common sense to prevent any future terrorism.

> > If you guys are really interested in emergency preparedness, get in

> > training in CPR, emergency first aid and anything else they recommend.
> > Volunteer for emergency teams if your locality has them. Get a 4-wheel
> > drive and keep it stocked with emergency supplies.
>
IMHO what is needed is armed air marshals on all flights, who are
trained to deal with razor knife wielding terrorists...and complete
carry on baggage inspection. We can never stop the carrier on bagage
that may contain shaving razors, which with a plastic holder, can be
quickly converted into "box opening" razor knives...but we must

prevent other weapons from being carried on to aircrafts and we must
have a sky marshal who is cleared and trained and armed on every
flight. Sky marshals can surpress knife wielding terrorists and
protect pilots, flight crews and passengers.

> > As much as I love ham radio, its time of value in an emergency has all

>
AGREED unless Hams get trained to be of technical value to the USA.

> Really Bill? Just because the WTC didn't need hams you discount their
> worth in a disaster.

I agree with Bill. Hams use obsolete communications methods and many
hams are not capable of maintaining their own equipment or being of
any value if drafted into our present military services. This was not
true when I, as a Ham, entered into military service at the time of
the Korean conflict.

> If terrorist had knocked out the Eastern Power grid or the telcomm
> centers similar to what a hurricane or earthquake does I suspect you
> would be talking differently.

IMHO Ham 2 meter repeaters would be of little aid to the hostages on a
hijacked aircraft who are equipped with cell phones and other com gear
that is now or will be available in the near future to passengers on
commercial airliners.

> Or do you figure everyone will be using Motorola Walkabouts in the

I think that ya'll are missing the point. It is true that Ham Radio would not be very effective in an environment with skyscrapers and a lot of stray RF. That said, Ham Radio is still an effective tool. I was asked to work with the Red Cross several times for health and welfare traffic, and also at evacuee camps during hurricanes. Now knock the hobby all you want, but there are benefits. Ever hear of Skywarn? No? How 'bout MARS? It's still in use. My point is not only the "hobby" has assisted others in times of need it has also helped me in my own career.

> the statements seen in QST or the ARRL nor praise them
> to the skies...and that is taken as "belittling" all radio
> amateurs...assuming that Heil represents all radio amateurs.

Your crap is hanging out there for all to see. You made statements that
you haven't seen or heard anything in the national broadcast media about
radio amateurs at the WTC site. You made statements about professional
communicators vs radio amateurs. One needn't assume that I represent
all radio amateurs. I wasn't under discussion. You weren't writing
about me. You as much as said that radio amateurs were not doing
important work in New York because you personally don't have any
knowledge of their activity. You were and are wrong.

> >This time,
> >you've even used a national tragedy in an effort to make a point.
>
> No. I did not wrap myself in quasi-patriotic bunting and
> equate my opinions to the Attack On America. I've held
> my opinions long before this week, stated them in here..

You chose to use this instance to try to make your point. You fail on
facts. You fail on sensitivity.

> Heil is angry because He tried to equate His opinions with
> the Attack On America, got caught at it, and persists in
> trying to denounce me as an "enemy of the state" because
> I do not believe as He does.

Heil didn't make the incorrect claim and persist in it. Anderson did.
I don't believe you to be an enemy of the state. I believe you to be an
insensitive geezer with an ax to grind and with too much free time which
has to be filled with something. In your case, it is your obsession
with amateur radio--something in which you are not a participant.

> >Getting good press is not the object.
>
> Ah, so...if no other news medium covers "emergency
> communications" by radio amateurs but the ARRL states
> it, I should only believe what the ARRL says?

Do you have reason to believe that the ARRL is lying? Do you have
information which proves that because another news medium makes no
mention of amateur radio asssitance, none took place?

> >The object is to perform a service to others.
>
> That does not require an amateur radio license.

It certainly does if what is taking place is communication via amateur
radio as other than a third party using a station controlled by a radio
amateur.

> Those with an amateur radio license are also granted to
> call non-hams "non-entities?" Yes, according to Heil.

With regard to amateur radio, you are such.

> >That you have not personally seen efforts by radio
> >amateurs does not negate the good that they do.
>
> I've never "negated any good that [radio amateurs] do."
>
> I said that I've not seen any non-ham media reference to
> "emergency communications" by radio amateurs.

So?

> >Heil is quite certain in his concern for victims and their loved ones.
>
> Concern for victims has no connection with discussing
> the organization, planning, training of true emergency
> communications nor the integration of all the various
> radio services in communities.

That would be wonderful. It was not, however, what you were doing.

> However, such statements as Heil's are almost de rigeur
> implications of being unpatriotic and unsympathetic to

> victims when Heil's opinions on other matters are not
> accepted.

It is possible to be both patriotic and an insensitive boob, Len. I
offer you up as proof.

> >Heil is also quite sincere in his suggestion that you blow it out your
> >ass.
>
> Suggestion noted...and not accepted.

>
> >> It is shameful that Heil uses the events of the Attack on

Nope. Doesn't fit. If Saddam had been driven out, the alliance would have made sure that somebody better got the job.

The Saudis and others did not want to allow a precedent to be set.

The Shah was better than the guy who replaced him. A similar thing
could have happened to the Iraq alliance puppet. IMO, they left Saddam
in power because they didn't want another Iran. How do you spell the
guy's name who took over Iran after the fall of the Shah?

>
>Bill, W7TI

Bill, I know it's hard for some people to understand, but most hams aren't publicity seekers, and simply provide the requested assistance in the background. Just today, (9/14/01), I received the following ARRL bulletin, which shows hams have been and are still needed in these efforts.

Ed WB6SAT

==========

SB QST @ ARL $ARLB040
ARLB040 Additional Amateur Radio volunteers sought from Greater New York City

ZCZC AG40
QST de W1AW
ARRL Bulletin 40 ARLB040
From ARRL Headquarters
Newington CT September 14, 2001
To all radio amateurs

SB QST ARL ARLB040
ARLB040 Additional Amateur Radio volunteers sought from Greater New York City

ARES is seeking additional volunteers from the Greater New York City area to assist in supporting the World Trade Center disaster relief and recovery effort. ARES is assisting the American Red Cross and emergency management officials.

New York City-Long Island Section Emergency Coordinator Tom Carrubba says volunteers must have a VHF (2-meter) or, preferably, a VHF/UHF (2-meter/70-cm) mobile radio, power supply and cables, and

mobile/portable mag-mounted gain antenna. Carrubba says hand-helds are not sufficient to deal with the difficult operating conditions.

''Operators are still needed,'' he said, but stressed, ''This is a difficult assignment.''

Amateurs are working two 12-hour shifts per day.

This duty requires a serious commitment and involves working in a possibly hazardous area in war zone-like conditions. Volunteers will need to supply some items of protective clothing. Amateurs considering communications duty in New York City should first contact the appropriate ARRL Section Emergency Coordinator in the tri-state area for further information on how to proceed:

* New York City-Long Island: Tom Carrubba, KA2D, ka2d@arrl.net or telephone 631-422-9594.

* Eastern New York: Ken Akasofu, KL7JCQ, kl7jcq@arrl.net

* Northern New Jersey: Steve Ostrove, K2SO, k2so@arrl.net.

* Connecticut: Darrow Loucks, WA1D, wa1d@arrl.net.

Assigned volunteers will be asked to report to American Red Cross Headquarters for credentials and assignments. Volunteers must use public transportation to ARC HQ because of limited vehicle access; there is no parking in that area.

Carrubba has asked potential out-of-region volunteers to ''stand by until we can provide for your safety and comfort.''

4125. For The Benefit of Leonard H. Anderson

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-15 14:48:09 UTC
From: Dave Heil <k8mn@earthlink.net>
Message-ID: <3BA35C05.951FD355@earthlink.net>
Source record: 20368

Len,

After you've digested this, perhaps you can begin phoning the broadcast networks to ask that they correct their omission of amateur radio's part. Then you may want to phone the League to set them straight about not insuring that the networks carry material on amateur radio. Be sure to let all concerned know that the telephone system and cellular systems are functioning perfectly well and that these "amateurs" aren't needed.

Dave Heil K8MN

(from the ARRL Letter)

==>AMATEUR RADIO RESPONDS IN FORCE IN WAKE OF TERRORIST ATTACKS

Some already are calling it "Amateur Radio's Finest Hour," as volunteers answer the call to assist in ongoing relief and recovery operations in New
York City, Washington, DC, and western Pennsylvania in the wake of terrorist
attacks on the US September 11. The need continues for operators to assist
over the long haul, however. Current estimates suggest hams may be needed
for a month or longer in the New York City area, and for at least the next
two weeks in Washington, DC.

Along with most other federal agencies, the FCC closed its offices and sent
its employees home following the attacks. The FCC issued no emergency declarations nor other special instructions to the Amateur Radio community.
The ARRL advised amateurs to stay alert to instructions from local authorities.

New York City-Long Island Section Emergency Coordinator Tom Carrubba, KA2D,
reports that hams have been supporting emergency officials and the American
Red Cross relief and recovery effort. Amateurs have been staffing several
Red Cross shelters in addition to a staging/National Disaster Medical System
center, various Red Cross units, and the Greater New York City American Red

Cross Headquarters as well as the New York City Office of Emergency Management.

Carrubba says the telephone system in lower Manhattan continues to be problematic because of the high call volume. "American Red Cross communications are overloaded, and traffic from the shelters is coming into the New York City net at a rapid pace," he said. "The Amateur Radio ops are doing a great job under very difficult and strange conditions, but this is what they have trained for; they are getting it done well."

Red Cross Communications Officer Jay Ferron, N4GAA, agreed. "The Amateur Radio community has come out very big and very strong," he said, adding that local clubs and repeater groups have volunteered gear, frequencies and operators.

New York City District Emergency Coordinator Charles Hargrove, N2NOV, has expressed his appreciation to the amateur community. "Thank you for all the support and well wishes," he said. "This is a difficult time for all of us. We appreciate all the amateurs who have volunteered their time and equipment."

Carrubba also cited the ongoing efforts of Guy Richman, KC2AYG, who has been coordinating net controls for the ARES nets, and Manhattan ARRL EC John Kiernan, KE2UN.

Carrubba is seeking additional volunteers from the Greater New York City region. He has asked out-of-state volunteers to "stand by until we can provide for your safety and comfort." Volunteers need a VHF (2-meter) or, preferably, a VHF/UHF (2-meter/70-cm) mobile radio, power supply and cables, and mobile/portable mag-mounted gain antenna. Carrubba says hand-helds are not sufficient to deal with the difficult operating conditions.

"Operators are still needed," he said, but stressed, "This is a difficult assignment."

Amateurs are working two 12-hour shifts per day, 8 AM to 8 PM and 8 PM to 8 AM, "plus or minus three or four hours, mostly plus," Carrubba said. Additional information is available on the ARRL Web site <http://www.arrl.org>.

At the scene of the Pentagon attack near Washington, DC, Virginia Section
Emergency Coordinator Tom Gregory, N4NW, reports an "upbeat" crew of about
two dozen amateurs is staffing six Amateur Radio stations in the immediate
vicinity of the Pentagon. "What shocked me the most was the devastation you
can see right there, 100 feet from the building," Gregory said. "The
destruction is total."

The ARES operation is providing logistical support between the Salvation
Army's relief and recovery effort on site and the agency's Arlington
headquarters. The Salvation Army has deployed several mobile canteens and a
feeding unit to serve military and civilian emergency personnel assigned to
the recovery operation.

"What we're finding is that communication is very difficult because of the
tremendous amount of noise from the construction-type equipment and the
generators providing power for the lights and support staff," Gregory said.
Because of the noise level, operators are being rotated frequently in and
out of the immediate vicinity of the attack. "There's the emotion of it, and
there's the tremendous amount of noise, and it's very grating on you because
you can hardly hear the radio to communicate," Gregory explained.

Gregory described the entire area as "very crowded with people" inside and
outside the Pentagon. "People and equipment cleaning up, finding bodies,
finding plane parts, firefighters still checking for hot spots, hoses,
equipment," he said. "The damage to the building looks worse when you are
right next to it than it does on TV."

"I found that it took me a few minutes to realize the gravity of what was
going on and the importance of what we hams are doing in our own small way
to help out," Gregory said. "The devastation of that building is awesome,
and it puts things in perspective and it certainly made me proud to be an
Amateur Radio operator and serve the people of the United States by offering
the support we could."

The Pentagon ARES operation continues to seek volunteers. "Because of the
immensity of the thing, we're trying to have six amateurs on duty at all
times," he said. "We need 20 volunteers every day for at least two
weeks."
Volunteers should e-mail Tom Gregory, N4NW, at n4nw@arrl.net.

Gregory emphasized that Pentagon site security is extremely tight. All ham
volunteers must have a photo ID issued by a government entity to the
secured
area. "The FBI is handling issuance of IDs for access to the secured
area
and is doing a complete NCIC check before a photo ID is issued," Gregory
said.

At the so-called "fourth" plane crash site in rural Somerset County
western
Pennsylvania, Kevin Custer, W3KKC, reports a busy scene as the
investigation
continues. Custer arranged preliminary repeater communication into and
out
of the crash site on Tuesday to help the Red Cross, Salvation Army,
Pennsylvania State Police, the FBI and other state and federal agencies
on
the scene.

Custer said the investigation could continue for several weeks. "At this
time we are preparing for the possibility of family members coming to
the
crash site--or close by," he said.

Montgomery County, Maryland, Deputy RACES Officer John Creel, WB3GXW,
observed that while the enormity of the attacks is bound to touch the
amateur community directly or indirectly, he has seen nothing but
professionalism among the responding operators in his area. Creel
advised
amateurs to "just be prepared," and he echoed the sentiment of many that
the
events of September 11 "will be with us for the rest of our lives.

More detailed and updated information on Amateur Radio's involvement in
the
disaster relief and recovery efforts is available on the ARRL Web site
<http://www.arrl.org>.

Uhhhhh Dick, We weren't talking about traffic handling. Drpfrench
was talking about voice broadcasts VS CW. Look back to see what
the context was. Here it is: "Put on any broadcast radio station
and count how many words there are in a 1 minute of time."

==>AMATEUR RADIO RESPONDS IN FORCE IN WAKE OF TERRORIST ATTACKS

Some already are calling it "Amateur Radio's Finest Hour," as volunteers answer the call to assist in ongoing relief and recovery operations in New York City, Washington, DC, and western Pennsylvania in the wake of terrorist attacks on the US September 11. The need continues for operators to assist over the long haul, however. Current estimates suggest hams may be needed for a month or longer in the New York City area, and for at least the next two weeks in Washington, DC.

Along with most other federal agencies, the FCC closed its offices and sent its employees home following the attacks. The FCC issued no emergency declarations nor other special instructions to the Amateur Radio community. The ARRL advised amateurs to stay alert to instructions from local authorities.

New York City-Long Island Section Emergency Coordinator Tom Carrubba, KA2D, reports that hams have been supporting emergency officials and the American Red Cross relief and recovery effort. Amateurs have been staffing several Red Cross shelters in addition to a staging/National Disaster Medical System center, various Red Cross units, and the Greater New York City American Red Cross Headquarters as well as the New York City Office of Emergency Management.

Carrubba says the telephone system in lower Manhattan continues to be problematic because of the high call volume. "American Red Cross communications are overloaded, and traffic from the shelters is coming into the New York City net at a rapid pace," he said. "The Amateur Radio ops are doing a great job under very difficult and strange conditions, but this is what they have trained for; they are getting it done well."

Red Cross Communications Officer Jay Ferron, N4GAA, agreed. "The Amateur Radio community has come out very big and very strong," he said, adding that local clubs and repeater groups have volunteered gear, frequencies and operators.

New York City District Emergency Coordinator Charles Hargrove, N2NOV, has expressed his appreciation to the amateur community. "Thank you for all the support and well wishes," he said. "This is a difficult time for all of us. We appreciate all the amateurs who have volunteered their time and equipment."

Carrubba also cited the ongoing efforts of Guy Richman, KC2AYG, who has been coordinating net controls for the ARES nets, and Manhattan ARRL EC John Kiernan, KE2UN.

Carrubba is seeking additional volunteers from the Greater New York City region. He has asked out-of-state volunteers to "stand by until we can provide for your safety and comfort." Volunteers need a VHF (2-meter) or, preferably, a VHF/UHF (2-meter/70-cm) mobile radio, power supply and cables, and mobile/portable mag-mounted gain antenna. Carrubba says hand-helds are not sufficient to deal with the difficult operating conditions.

"Operators are still needed," he said, but stressed, "This is a difficult assignment."

Amateurs are working two 12-hour shifts per day, 8 AM to 8 PM and 8 PM to 8 AM, "plus or minus three or four hours, mostly plus," Carrubba said. Additional information is available on the ARRL Web site <http://www.arrl.org>.

At the scene of the Pentagon attack near Washington, DC, Virginia Section Emergency Coordinator Tom Gregory, N4NW, reports an "upbeat" crew of about two dozen amateurs is staffing six Amateur Radio stations in the immediate vicinity of the Pentagon. "What shocked me the most was the devastation you can see right there, 100 feet from the building," Gregory said. "The destruction is total."

The ARES operation is providing logistical support between the Salvation Army's relief and recovery effort on site and the agency's Arlington headquarters. The Salvation Army has deployed several mobile canteens and a feeding unit to serve military and civilian emergency personnel assigned to the recovery operation.

"What we're finding is that communication is very difficult because of the tremendous amount of noise from the construction-type equipment and the generators providing power for the lights and support staff," Gregory said. Because of the noise level, operators are being rotated frequently in and out of the immediate vicinity of the attack. "There's the emotion of it, and there's the tremendous amount of noise, and it's very grating on you because you can hardly hear the radio to communicate," Gregory explained.

Gregory described the entire area as "very crowded with people" inside and outside the Pentagon. "People and equipment cleaning up, finding bodies, finding plane parts, firefighters still checking for hot spots, hoses, equipment," he said. "The damage to the building looks worse when you are right next to it than it does on TV."

"I found that it took me a few minutes to realize the gravity of what was going on and the importance of what we hams are doing in our own small way

to help out," Gregory said. "The devastation of that building is awesome, and it puts things in perspective and it certainly made me proud to be an Amateur Radio operator and serve the people of the United States by offering the support we could."

The Pentagon ARES operation continues to seek volunteers. "Because of the immensity of the thing, we're trying to have six amateurs on duty at all times," he said. "We need 20 volunteers every day for at least two weeks." Volunteers should e-mail Tom Gregory, N4NW, at n4nw@arrl.net.

Gregory emphasized that Pentagon site security is extremely tight. All ham volunteers must have a photo ID issued by a government entity to the secured area. "The FBI is handling issuance of IDs for access to the secured area and is doing a complete NCIC check before a photo ID is issued," Gregory said.

Exactly. As I understand it, some people in Afghanistan already beat
a hasty retreat across the Pakistani border. Pakistan itself has
already agreed to all U.S. requests. The writing's pretty much on the
wall.

Well, the greatest thing going for us right now is the almost
universal revulsion for what bin Laden and his followers have done.

Saudi Arabia's highest Islamic authority has published some very harsh
words in a fatwa regarding what happened. If the Taliban continue to

coddle him, I can't imagine the backlash against them wouldn't be severe. Of course, they've already said they'll try him on the evidence, so it may be that us attacking Afghanistan would polarize even the moderates against us.

As a side note, frankly, I'm not sure we should say "no" to letting an Islamic court deal with bin Laden; the justice in some of those countries isn't at all pretty (worse than anything we'd do to him under our laws), and we'd earn far greater respect and comradere among the moderate nations of the region.

Anyway, if we do attack, nobody really likes the guy, except, of course, certain extremists. Russia thinks bin Laden may be supporting Chechan terrorists; China is concerned about Islamic terrorism spilling into its western provinces. Even the moderate Pakistani military rulers have been looking for an excuse to crack down on fundies, and the deaths of 300 Pakistani nationals at the WTC may be the perfect opportunity.

Yes, we have the opportunity to do something really dumb. This is also an incredible opportunity to unify the world and get rid of many of the world's most dangerous nuts at the same time.

The trouble is, I (and so many others, I would imagine) feel quite a pull towards dealing out some real carnage after what has happened. Maybe it's right, maybe it's wrong, but in either case, it's obvious we'll need to tread carefully.

>equal whatever wrong done.

I have to disagree with this. What has to happen now is for the USA and allies
to think about the end result we want years down the road, not a quick response
that may make us more enemies. The end result we want is for the responsible
criminals to be brought to justice, for our alliances with friendly countries
to be strengthened, and for countries like Afghanistan and Libya to stop
sheltering terrorists. The terrorist organizations have to be destroyed, not
just a few leaders whose names have become infamous.

The way to address terrorism is as a criminal conspiracy, not an act of war.
Wars occur between sovereign governments, and are frequently ended by
negotiations. To treat terrorists as a form of the military gives them some
measure of legitimacy that they do not deserve.

Striking back blindly simply makes our case weaker in world opinion. And
instead of destroying the terror organizations it will make them stronger
because the difference between us and them will be lessened.

It will probably take some time for our govenrment and its allies to work up a
plan. We must be patient while that process is going on.

Check out what was doen to deal with the "Barbary Coast" pirates 200 years ago.
The solution used is the source of the words "shores of Tripoli" in the USMC
hymn.

I heard the wife of a victim interviewed yesterday. She wants us to
sit down at a conference table with Osama Bin Laden and find out
what he wants in return for stopping the terrorism.

In article <3BA35C05.951FD355@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>After you've digested this, perhaps you can begin phoning the broadcast
>networks to ask that they correct their omission of amateur radio's
>part.

Are there no ARRL staffers who can do this?

What has the ARRL been able to do in past emergencies as far
as publicity for all those good works?

Remember, "non-entities" have no standing with anyone...

What has K8MN/Heil done about notifying the rest of the
news media? K8MN/Heil is an Entity (by his own definition).

>Then you may want to phone the League to set them straight about
>not insuring that the networks carry material on amateur radio.

Why leave out the newswires and newspapers?

The ARRL presents what it wants when it wants. It has total
control of its website/publication content. Since it must
be self-sustaining, it does a good job of presenting amateur
radio in what is called "spin." "Spin" is the one-sided emphasis
on certain things and a de-emphasis on other things that take
credit away from the first.

Two ARRL staffers in here have objected to using the word
"spin" in what others perceive in the descriptive output of
the ARRL. "Spin" is one form of propaganda and is common
in American politics. One political party may denounce spin
practiced by another political party but, with each side doing
it, which side is "factually right" or even "morally right?"

K8MN/Heil becomes furious and enraged because "non-
entities" state simply that the rest of the news media does
not spin, emphasize, or even bother to mention one particular
group's efforts relative to all other efforts in an emergency,
that beginning on day 9-11 or in the past.

Rather than doing or even claiming some action on his own,
K8MN/Heil DEMANDS that "non-entitites" do his work for
him. That is imperious and tries to mask previous
communications within this newsgroup where K8MN/Heil
was not satisfied with certain "non-entity's" opinions or
statements.

>Be sure
>to let all concerned know that the telephone system and cellular systems
>are functioning perfectly well and that these "amateurs" aren't needed.

Why state untruths? It should be perfectly obvious that
normal "non-entity" (non-amateur-radio) communications
have been damaged. Verizon is reported to be working over
the weekend to restore "non-entity" (non-amateur-radio)
fiber and wire communications as much as possible in
lower Manhattan. Those workers are professionals.

The "non-entity" communications (those used by non-hams)
is currently functioning well enough to coordinate police,
fire, EMT, and building workers' efforts right now. This
should be obvious to anyone observing/reading such work
in NYC without having the ARRL publicize it.

Volunteers of all kinds having been turning out to try to
help the rescue/clean-up work in NYC. That information
has been publicized since day 9-11 in the news media.
So many that NYC officials have had to turn them back.

NYC Mayor Rudolph Guilliani said on the night of day
9-11 that "they do not need more volunteers [in the
lower Manhattan area]." NYC officials have stated that
they prefer building construction workers, [high] iron
workers to help with the rescue and clean-up. If some
of those are also licensed radio amateurs, that is good,
but their amateur radio experience/knowledge does
little good in an estimated half-megaton of debris from
the destroyed buildings.

The observable fact of little or no news media coverage
of amateur radio participation in emergency
communications has enraged K8MN/Heil and some
others (mostly pseudonymic trolls). They demand
instant respect and worship (without any claimed
efforts in the emergency of their own) because it is
publicized by a special interest group. All for a hobby.
All for their own vainglorious ego boosting.

Now, what has K8MN/Heil done as to volunteerism
during these days of the Attack On America? In here
he has done little but insult and belittle myself for
pointing out an observable fact of the news media not
mentioning some amateur radio licensees in their
"emergency communications" work.

It is fairly clear that K8MN/Heil's newsgroup
communications is just another attempt to "get"
one who does not accept K8MN/Heil's view of the
world.

Leonard H. Anderson

4141. Re: Ham radio irrelevant during terrorist crisis

Message-ID: <20010915155555.02105.00000197@nso-bh.aol.com>
Source record: 20385

In article <3BA2BF41.89568293@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>Your crap is hanging out there for all to see.

So is K8MN/Heil's... :-)

>You made statements that
>you haven't seen or heard anything in the national broadcast media about
>radio amateurs at the WTC site.

Mostly true. I did not confine myself to lower Manhattan.

I still haven't seen anything in the news media (which
includes European and Asian news) about radio amateurs
performing emergency communications...with the
exception of the ARRL and QRZ sites.

>You made statements about professional
>communicators vs radio amateurs.

I have made that comparison for years regarding many
events.

>One needn't assume that I represent all radio amateurs.

One MUST assume that...it is in all of K8MN/Heil's
phrasing and expressed rage, spin, boosterism.

>I wasn't under discussion.

K8MN/Heil is NOW. He furiously jumped in demanding
apologies and allegiance to amateur radio and levelling
insults at myself.

>You weren't writing about me.

K8MN/Heil forces the issue to focus on himself.

>You as much as said that radio amateurs were not doing
>important work in New York because you personally don't have any
>knowledge of their activity. You were and are wrong.

Incorrect. I said that there is little or no observable mention
of any amateur radio emergency communications efforts
in the news media.

If that is "wrong" then point out where and when in the non-
amateur news media.

>You chose to use this instance to try to make your point. You fail on
>facts. You fail on sensitivity.

I have said publicly, in the past, that the ARRL exercises
"spin" on its self-promotion and the promotion of amateur
radio. That is factual, referenceable by a Google search.

I don't fail on observation of the news media other than the
the news media being large, both nationally and inter-
nationally. K8MN/Heil has only referenced specific special
interest amateur radio groups as "news media."

K8MN/Heil wishes to define "sensitivity" in others but the
observable reality is simply that K8MN/Heil is too
sensitive to opinions in opposition to his own.

>Heil didn't make the incorrect claim and persist in it.

K8MN/Heil did.

>I don't believe you to be an enemy of the state.

Of course K8MN/Heil does...as witness the vergiage
below:

>I believe you to be an
>insensitive geezer with an ax to grind and with too much free time which
>has to be filled with something.

K8MN/Heil's "axe" is much, much bigger than mine. :-)

"Free time" is available to all, especially those who are
retired. Perhaps K8MN/Heil wants all to have NO free
time? Work, work, work endlessly for the betterment of
the [ham] state?!?

My "obsession" (as K8MN/Heil put it) is simply for the
elimination of the morse code test in all amteur radio
license examinations. That position has left myself and
most other NCTAs open to a large and varied amount of
abuse, insults, denigrations, and deprecations that have
ranged far beyond amateur radio. Such have demanded
some response from myself which, of course, was
rewarded with a greater intensity of personal abuse from
the militant PCTAs [K8MN/Heil is one of those].

>In your case, it is your obsession
>with amateur radio--something in which you are not a participant.

I have no "obsession with amateur radio." I have, and
will continue to speak out against the morse code test
necessity for any amateur radio license examination.

However, K8MN/Heil's "obsession" with needing
"participation in amateur radio" as a "credential" in
(ostensibly) open discussion is an expression of his

inability to civilly discuss matters of regulatory policy in all of radio regulations. Heil, not just the combined persona of "K8MN/Heil" (indistinguishable in here) has expressed himself as "superior" in radio in the past. Not just amateur radio but ALL of radio.

For an example of restrictive expression of opinion, Heil could just as well try to spin that NO ONE is capable of talking about US foreign policy or the State Department without being a "participant." [Heil is a retired (?) State Department emplyee] That is ridiculous in and of itself.

I advocate the elimination of the morse code test for any amateur radio license. By Heil's logic one "cannot" do so without first taking such a test. Specious and illogical condition.

Heil and some others have claimed that "non-participants" in amateur radio "know nothing about amateur radio" and therefore cannot discuss anything about amateur radio. US amateur radio is one of the most open of civilian avocations, well-publicized, with many kinds of "boosting" media outlets and with regulations that forbid secrecy in communications. Amateur radio physics is the same as radio physics of any other radio service. Yet Heil and his ilk would have everyone believe that it is a "closed lodge hall" open only to those who have passed hall members' clearance and any talk about ENTERING the lodge hall is somehow forbidden.

Entrance to the lodge hall requires passing certain tests whose questions and answers are open and free to the public plus a test on manual morse code ability. Those tests have been set by a US government agency. The regulations are not divine, did not arrive with the burning of bushes, are not immortal...yet Heil and his ilk demand passing them first, without question, before the regulations can be discussed openly. That is a megalomaniacal viewpoint as well as a restriction of free speech.

>Do you have reason to believe that the ARRL is lying?

No. I've said before and will say again that it is observable that the ARRL uses spin to both promote themselves and their existance as well as promoting amateur radio. It is not a black-and-white condition of "truth" or "lie," but in some cases it is exaggeration of some things and a diminuation of other things.

As an example of "spin," consider the various SAREX news from the ARRL. Astronauts who have been granted amateur radio licenses are ALWAYS referred to as "ham-astronauts."

This carries the implication that they were hams first and
astronauts second, almost as an occupation afterthought.
Anyone who has been involved with spaceflight and
spacecraft would not think so and may even chuckle at the
absurdity of such a connotation.

In times of emergency, the amateur radio assistance in
communications (usually restricted to "health and welfare"
messaging) is called "emergency communications." In
such a spin presentation, readers/viewers get the implication
that amateurs are providing full police, fire, and government
infrastructure communications. That MAY have occurred
in a few rare, isolated instances but there is no indication
at all that it happened on 17 Jan 94 nor on 11 Sep 01.

>Do you have
>information which proves that because another news medium makes no
>mention of amateur radio asssitance, none took place?

That was not the issue although Heil insists it is.

Is there any information/evidence from national or international
news media that such assistance did take place?

Is there any information/evidence from the news media that
such assistance took place in the past? [try to keep
such examples from wire services, or daily newspapers
rather than obscure weeklies]

>> >The object is to perform a service to others.
>>
>> That does not require an amateur radio license.
>
>It certainly does if what is taking place is communication via amateur
>radio as other than a third party using a station controlled by a radio
>amateur.

There are NO restrictions as to who can operate a radio
in a true emergency. Read the FCC regulations.

By the same restrictive-condition Heil logic, amateur licensees
are not allowed to operate public radio service radios except
as "third-party traffic" and with the permission of the operator.

>> call non-hams "non-entities?" Yes, according to Heil.
>
>With regard to amateur radio, you are such.

N2EY/Miccolis is the official "translator" in this newsgroup.
Using the same "tranlation" capability, the Heil statement
above could be written as:

"Shut the hell up...*I'm" in charge here!" :-)

>> Concern for victims has no connection with discussing
>> the organization, planning, training of true emergency
>> communications nor the integration of all the various
>> radio services in communities.
>
>That would be wonderful. It was not, however, what you were doing.

So...K8MN/Heil charges "insensitivity" to day 9-11 victims
on discussing generalities of true emergency organization,
planning, training? For the fact of not glorifying the ARRL
promoted stories of amateur radio involvement with that
terrible, monstrous attack on the USA?

Perhaps "non-entities" must obtain an amateur radio
license in order to grieve for the victims? Am I allowed in
a church only if I present a ham license? Does the Red
Cross require my passing a morse code test to give
blood? If so, I am guilty on all counts as a "non-entity."

>It is possible to be both patriotic and an insensitive boob, Len. I
>offer you up as proof.

>You are not the run-of-the-mill insensitive boob; you are perhaps the
>ultimate insensitive boob.
>
>Blow is out your ass, Len.

Ordinarily I'd tell someone who said that to go to hell.
There isn't any need to say the obvious.

Actually, bin Laden's goals are fairly simple (according to the Western media, anyway). He's actually from Saudi Arabia. He wants all infidels out of that part of the world - most notably, Saudi Arabia itself. For starters, anyway.

You forgot to add one line to the ending of your "quatrain" (grin) above Jim
It should read: "In the final review, the same will be the product of an unbalanced
mind, and will no doubt show up in the rec.radio.amateur.policy, alt.fan.art-bell
or the alt.radio.scanner.flame-fest newsgroups. The Net's official screwball magnets"

No offense. it's just that I note very often that the most fruitkake
postings always appear in th9ie above NG's - alt.fan.art-bell being
at the top of the list for looney rantings - quite amusing sometimes too!

>many unlicensed people can carry cellular telephones...

I wish you knew how wrong you are. Amateur Radio is used all over the country for emergency, skywarn, storm chasing, natural disasters and disasters such as this. As a matter of fact, they're still asking hams to volunteer in NYC as we speak. Health and Welfare traffic is also being passed on HF.

Those cellphones aren't going to do you any good when the power is out or the cell providers lose their service because of a natural disaster.

So misinformed you are.

>BUT
>If there is ever to be a full scale war Ham Radio will be again very
>valuable if it can create a cadre of trained people who are modern

>from any amateur radio license examination.

No, it's to harrass and harangue people who represent a group of radio operators that you, for what ever reason, hate.

The code issue has been dealt with, wether any one of us likes it or not. The FCC has stated both in official and unoffical comments that it's hand are tied by treaty.

Your on-going ranting and scurrilous behaviour herein is nothing more than hate mongering.

Nothing we don't expect from a PUTZ like you.

>Bzzt! Wrong. Several in here have stressed the "service"
>aspect of amateur radio (as if it were some quasi-military
>organization)....(SNIP)

No, Lennie..Only you do that. Some of us have stressed the importance of meeting the Basis and Purpose of Part 97 in order to validate our continued access to valuable electromagnetic spectrum that is coveted by others.

YOU make the "military" analogy, if for no other reason than some of us are veterans.

Just another one of your lies.

It was *you*, not the ARRL commenting on the lack of exposure in other
than the amateur radio press. Here's your chance to rectify that.

> What has the ARRL been able to do in past emergencies as far
> as publicity for all those good works?

Why not drop 'em a line and ask them?

> Remember, "non-entities" have no standing with anyone...

Go for any current class amateur license; pass the test and you can be
an entity too.

>
> What has K8MN/Heil done about notifying the rest of the

You're the only person I've seen to use that term regarding the League.
The ARRL is concerned with amateur radio. It stands to reason that it

would publicize the things radio amateurs are doing.

> Two ARRL staffers in here have objected to using the word
> "spin" in what others perceive in the descriptive output of
> the ARRL. "Spin" is one form of propaganda and is common

The League isn't a political party. Nobody was discussing spin.
What we had was LHA stating that because he saw only professionals and
cellphones, amateurs were not involved.

> K8MN/Heil becomes furious and enraged because "non-
> entities" state simply that the rest of the news media does
> not spin, emphasize, or even bother to mention one particular

I'd tend to be more satisfied if your statements were more than
occasionally factually correct. I view you as an embittered geezer
with a severe case of amateur radio penis envy.

> >Be sure
> >to let all concerned know that the telephone system and cellular systems

No shit? Who'd hire amateurs to restore telephone communications on a
"for profit" system. What are the untruths here, Len. Didn't you write
about seeing people using cellphones? Do you now mean that you admit
that some of the cellular system was damaged. Who was telling the
untruth?

> The "non-entity" communications (those used by non-hams)

> All for their own vainglorious ego boosting.

Len, you aren't a ham. You aren't even a professional anything anymore.
You are a retired guy with too much time and not enough to do. You want
to become a ham but you have yet to take the first baby set toward
achieving that goal. You're envious and you're petty.

> Now, what has K8MN/Heil done as to volunteerism
> during these days of the Attack On America? In here
> he has done little but insult and belittle myself for

You made a claim as if it were fact. It was wrong and you have been
shown the error. You are insulted and belittled because you are a
pontificating gas bag.

> It is fairly clear that K8MN/Heil's newsgroup
> communications is just another attempt to "get"
> one who does not accept K8MN/Heil's view of the
> world.

Len, you've been "gotten" so many times that it goes beyond counting.
It would seem that you'd grow tired of chewing on those brogans of yours
after inserting them into your yap so many times.

Dave K8MN

You'd have to have some information on which to base your comparisons.
You certainly don't know much about amateur radio and you haven't been a
professional communicator in years. You'd currently be qualified to
compare...ummmm, retired geezers with other retired geezers.

> >One needn't assume that I represent all radio amateurs.
>
> One MUST assume that...it is in all of K8MN/Heil's

Levelling insults at you is my forte. You make yourself an easy target.
Please give reference to a posting where this apology was demanded.
Please do likewise for any demand of allegiance to amateur radio.
What you were and are short on is factual information. You don't know
if I was furious or not.

> >You weren't writing about me.
>
> K8MN/Heil forces the issue to focus on himself.

Just how do you make that jump, your geezerness?

Len, why not come out an admit your rather empty existence?
If you had wanted an amateur license, your vast free time would have
permitted you to attain by now. You'd rather fill the time by haunting
an amateur radio newsgroup.

> My "obsession" (as K8MN/Heil put it) is simply for the

I'm a ham Len--been one for decades (nearing four of 'em). You wouldn't
even need pass a code test for one particular class of amateur license.
You haven't even bothered with that. You're a lonely old wannabe.

> >In your case, it is your obsession
> >with amateur radio--something in which you are not a participant.
>
> I have no "obsession with amateur radio." I have, and
> will continue to speak out against the morse code test
> necessity for any amateur radio license examination.

No one who is not obsessed with amateur radio posts for years on an
amateur radio newsgroup when he himself is not even a radio amateur.

> However, K8MN/Heil's "obsession" with needing
> "participation in amateur radio" as a "credential" in
> (ostensibly) open discussion is an expression of his
> inability to civilly discuss matters of regulatory policy in
> all of radio regulations. Heil, not just the combined persona
> of "K8MN/Heil" (indistinguishable in here) has expressed

> radio but ALL of radio.

As I've stated in the past, Leonardo, I'm superior to some--inferior to
others. I've been involved with operations in amateur radio, military
radio, other government radio (all three more recently than you).

> For an example of restrictive expression of opinion, Heil
> could just as well try to spin that NO ONE is capable of

> talking about US foreign policy or the State Department
> without being a "participant." [Heil is a retired (?) State
> Department emplyee] That is ridiculous in and of itself.

There is much difference between talking about something and knowing about it. I would venture a guess that you know even less about foreign policy than you do about amateur radio.

> I advocate the elimination of the morse code test for
> any amateur radio license. By Heil's logic one "cannot"
> do so without first taking such a test. Specious and
> illogical condition.

I could set myself up as an unasked and unwanted advocate for the institution of licensing fees for amateur astronomers. I wouldn't have to necessarily know anything about astronomy. All I'd need to know is what I want to happen. I could even begin to haunt an astronomy newsgroup and to make lengthy, pontificating posts in support of my position. I'll bet that amateur astronomers would think such a guy was waaaaaaay out there.

> Heil and some others have claimed that "non-participants"
> in amateur radio "know nothing about amateur radio" and

> radio physics of any other radio service. Yet Heil and his
> ilk would have everyone believe that it is a "closed lodge
> hall" open only to those who have passed hall members'
> clearance and any talk about ENTERING the lodge hall
> is somehow forbidden.

As I stated earlier, there is a difference between talking about something and knowing about it. "I read a magazine once" or "I read a book once" are hardly likely to lead others to believe that you have any expertise or to lend your views much credence. The only truth apparent in your "lodge hall" tripe is that amateur radio is the lodge. Only those who have passed an exam to become radio amateurs may enter that lodge hall. Based on your track record, we won't be seeing you at lodge meetings any time soon.

> Entrance to the lodge hall requires passing certain tests
> whose questions and answers are open and free to the

> viewpoint as well as a restriction of free speech.

We've been down this road before, Len. You've been talking (writing)
for years. Nothing requires that anyone lend credence to your ideas.
Nobody need bow to the guy who has a few friends who are hams.

> >Do you have reason to believe that the ARRL is lying?
>
> No. I've said before and will say again that it is observable
> that the ARRL uses spin to both promote themselves and
> their existance as well as promoting amateur radio. It is not
> a black-and-white condition of "truth" or "lie," but in some

> of other things.

I have the same problem with your use of the term "spin" in describing
what the ARRL publishes as do the League staffers you've encountered.
We'd even have to assume that you are a regular QST, Handbook and Web
page reader for you to make such a blanket statement.

> As an example of "spin," consider the various SAREX news
> from the ARRL. Astronauts who have been granted amateur
> radio licenses are ALWAYS referred to as "ham-astronauts."
> This carries the implication that they were hams first and

> absurdity of such a connotation.

It never once occurred to me to believe that the astronauts were hams
first or, for that matter, to think that it makes a rat's ass one way or
the other.

> In times of emergency, the amateur radio assistance in
> communications (usually restricted to "health and welfare"

Sorry, folks, this is no longer a criminal matter. We are in a state of war. And the incoming damage may not be- probably is not- over yet. War and criminal matters are rather disparate in the resolution.

In the meantime, be aware of your surroundings. One high authority says that there are hundreds of radical Muslim terrorist enclaves operating within the USA and they have been here for years. Another very high placed source says that one of Tuesday's hijackers has lived in the USA since 1993, and took a 4 year degree here. Two others lived in San Diego. One hundred other terrorists have been identified specifically and are now on a nationwide "watch list". Considerable money has been raised in the USA by and for these very terorist operations, both here and abroad.
If there had been just another terrorist "act" then the situation would not have elevated to this state, but this was an all out assault which was only partially successful. There were almost certainly other terrorists on other airliners who did not meet their objectives. One was the plane that went down in Pa, which was almost certainly thwarted by several of the hijacked passengers causing the terrorists to crash the plane into a field instead of the White House or Capitol Building.
Another was when the flight from Newark with three hijackers aboard was cancelled at the last minute, because of the
nationwide air shutdown following the WTC crashes, and the three Arabs on the flight raised such a ruckus about the flight being cancelled that air[port security was called but by the time security arrived, they had

disappeared.

It seems likely this is nowhere near over.

What does Bin Laden want? To kill as many people as can be managed. We are Evil, Satan, the Infidel to be distroyed. And he is not by any means the only radical Muslim cleric who states this emphatically. One being interviewed on TV yesterday was rabid in the extreme, saying that the USA doesn't deserve to exist. Where they come up with this is not clear, but it sure isn't from the Koran.

Jim,

I have not heard from WA1HLR since the mid 70s but he was part of the
3880 gang which included many AM stations from up and down the Atlantic
coast, yours truely included. Tim was interesting to chat with. I
always thought he was funny, but that was another time and place. I have
not heard him on the air in about 25 years and thought he was out of the
hobby. He was known on the air by many as Tim - Tron.

Anyone in this group rember the WA1HLR "slime-o-tron?

>Guys, considering what has and is happening, my thought is what a few ARE
>doing is a bit more important than arguing over who gets credit. C'mon,
>guys. Please!

Quite a few ARE doing good things...but that isn't the "new" subject that originally began as a comment about the amateur radio involvement with the Attack On America .

This new thread is really a continuation of an old and tired thread wherein a few regulars in here have some kind of need to attempt humiliation and denigration of those who have and do propose changes in amateur radio testing.

When these regulars (all PCTAs) cannot get their opinions cherished and respected, they turn to the very visible personal attacks on individuals holding opposite opinions. This was true before FCC 98-143 and it continues well after FCC 99-412 (restructuring).

These regulars "raise the noise level" (in effect) so far above any issue discussion that the subject is lost in the blatant vituperation directed to the person of others.

They must have their way, ergo everyone is subjected to their insult postings. I will not take any sort of "blame" for causing the personal insults directed toward anyone but neither will I sit silent while such immature juveniles cannot civilly discuss issues. No one should tolerate bullies...yet at least one such insists that all must do as he did before discussing anything about amateur radio.

If you truly wish a stop to the "bully" postings you may take action to change this newsgroup from unmoderated to moderated. [inquire of KH6O for the procedure] This would all pre-distribution screening of "offensive" material (to some) and keep the unlicensed out of this room of the lodge hall.

With all kind regards,
Leonard H. Anderson

Just relating what I heard on the radio, Jim. Consider what would have
happened to the hijacked planes if the pilot and/or co-pilot had been
carrying concealed firearms - or even if Barbara Olsen had had a 9mm in
her purse.

Why don't you have a PhD degree, Larry? Probably the same reason
that I don't have one. When people are satisfied with a certain
level, why should they attempt a higher level? A tech license
grants all amateur privileges above 30 MHz. If HF doesn't
appeal to a tech, why should he/she upgrade?

If an RF-genius has no interest in amateur radio, why should he/she
waste his/her time getting a ham license?

>Whoops, never mind!

>Levelling insults at you is my forte.

...this is obvious...and seems to be most of K8MN's
"discussions" in this newsgroup...as witness the
following pearls of widom.

>Just how do you make that jump, your geezerness?

>Is that now your claim?

>My statement has nothing to do with enemies of the state.
>You might qualify as candidate for "enema by the state".

>Len, why not come out an admit your rather empty existence?
>If you had wanted an amateur license, your vast free time would have
>permitted you to attain by now.

My object here is not to attain an amateur radio license. It
is to advocate the elimination of the morse code test for
any amateur radio class examination.

>You'd rather fill the time by haunting an amateur radio newsgroup.

No. I am not "haunting" anything, just advocating the
elimination of the morse code test.

>I'm a ham Len--been one for decades (nearing four of 'em).

That is understood. If that is what you enjoy, then it is
good for you.

What I am wondering is why you have this obsession to
insult others who don't think the same way you do....and
that is indeed what you do in here.

>You wouldn't
>even need pass a code test for one particular class of amateur license.
>You haven't even bothered with that. You're a lonely old wannabe.

Incorrect again. K8MN assumes too much and is getting
obsessive with the "shut up if you don't have a license" ploy.

>No one who is not obsessed with amateur radio posts for years on an
>amateur radio newsgroup when he himself is not even a radio amateur.

My "obsession" (if Heil insists is the operative word...and it
is not) is to advocate the elimination of the morse code test.

K8MN cannot argue that subject, insists that one "must"
have an amateur radio license in order to discuss changes
to the amateur radio regulations.

>As I've stated in the past, Leonardo, I'm superior to some--inferior to
>others.

No, it comes across clearly that K8MN is superior to all that
have opposite opinions to his. See the following...

>There is much difference between talking about something and knowing
>about it. I would venture a guess that you know even less about foreign
>policy than you do about amateur radio.

>I could set myself up as an unasked and unwanted advocate for the
>institution of licensing fees for amateur astronomers.

K8MN is free to do that, but why? This is not an astronomy
newsgroup and astronomers do not need to take morse
code examinations.

>As I stated earlier, there is a difference between talking about
>something and knowing about it. "I read a magazine once" or "I read a
>book once" are hardly likely to lead others to believe that you have any
>expertise or to lend your views much credence. The only truth apparent
>in your "lodge hall" tripe is that amateur radio is the lodge.

That is the apparent viewpoint of myself and others on
viewing the PCTA postings or those who think their amateur
radio license permits them to insult all "lesser" beings..

>lodge hall. Based on your track record, we won't be seeing you at lodge
>meetings any time soon.

Based on K8MN's track record he has turned off many
prospective radio amateurs with such postings.

>We've been down this road before, Len. You've been talking (writing)
>for years. Nothing requires that anyone lend credence to your ideas.
>Nobody need bow to the guy who has a few friends who are hams.

The ones who are without credence are the ones who
cannot discuss any issue without personally insulting the
communicator.

>It never once occurred to me to believe that the astronauts were hams
>first or, for that matter, to think that it makes a rat's ass one way or
>the other.

Everyone knows that K8MN doesn't give a "rat's ass" for
any opposite opinion. That is quite obvious.

>You're the one with all of the time. Research it and get back to me.
>Be sure to include the European and Asian news broadcast media since you
>indicate that you watch them too.

K8MN wants others to do his homework. He would rather
have fun insulting others and making sarcastic comments.

<on FCC rules...>

>I have read them.

All of them?!!? Parts 0, 1, 2, and 97?

>I have not the slightest idea what the hell the above is supposed to
>mean.

Read them again. Comprehension will come with study.

>> There isn't any need to say the obvious.
>
>I'll bet you have to tell numerous folks to go to hell...and often.

No, for ultimate insult I tell them to try to have a rational
discussion with Heil, not hell...but that is only to a very
select few.

Thank you for all the non-discussion of amateur radio
issues.

4167. Re: Ham radio irrelevant during terrorist crisis

>professional communicator in years.

Except for his stint in the Army, he hasn't been one since 1950-something.

>What you were and are short on is factual information.

That's an understatement. Lennie could re-retire on what he DOESN'T know
about radio...especially AMATEUR radio.

>You'd rather fill the time by haunting
>an amateur radio newsgroup.

I think "harrassing" would be a better description here, Dave.

Lennie the Liar spurts:

>> I advocate the elimination of the morse code test for
>> any amateur radio license. By Heil's logic one "cannot"
>> do so without first taking such a test. Specious and
>> illogical condition.

No, Lennie, YOU are the "specious and illogical condition". The code test
issue has been dealt with. The reaminder of your trolling herein is solely the
acts of a desperate and lonely person.

>Based on your track record, we won't be seeing you at lodge
>meetings any time soon.

That's the best news I have heard all week!

>My object here is not to attain an amateur radio license. It
>is to advocate the elimination of the morse code test for
>any amateur radio class examination.

No it's not. It's to harrass and harangue a part of our society that, for
whatever reason your weak little mind festers on, has offended you.

You're just not man enough to put it down and move on.

>What I am wondering is why you have this obsession to
>insult others who don't think the same way you do....and
>that is indeed what you do in here.

Dave doesn't incite or insult others based on thier differing opinions.
He get's riled, as I do, when he is insulted by someone who doesn't have a clue
as to what they are talking about.

That, by the way, would be YOU, Your Putziness.

>You're a lonely old wannabe.
>
>>Incorrect again. K8MN assumes too much and is getting
>obsessive with the "shut up if you don't have a license" ploy.

Nope. He's got it about right. You're a wannabe.

>My "obsession" (if Heil insists is the operative word...and it
>is not) is to advocate the elimination of the morse code test.

You're either a pathological liar, or you are fooling yourself. Which is
it?

Lennie starts off again....

>No, it comes across clearly that K8MN is superior to all that
>have opposite opinions to his. See the following...
>
>>There is much difference between talking about something and knowing
>>about it. I would venture a guess that you know even less about foreign
>>policy than you do about amateur radio.

Nope...he had it about right again. You are pretty ignorant of what's
going on in the world around you. Witness you frerquent and GLARING

inaccracies and omissions of PRESENT Amateur policy or practice.

Even in the "morse code test" issue, you seem to be unaware of what the
current state of affairs is......

>That is the apparent viewpoint of myself and others on
>viewing the PCTA postings or those who think their amateur
>radio license permits them to insult all "lesser" beings..

Not "all" leeser beings, Lennie, just you.

>Based on K8MN's track record he has turned off many
>prospective radio amateurs with such postings.

And those persons would be.....?!?!?

>The ones who are without credence are the ones who
>cannot discuss any issue without personally insulting the
>communicator.

Then you finally admit that you are a chronic troll?

You are quick to suggest "Google Search". Anyone who wants to see just
how black your pot and kettle are can take a walk down Google Lane and revisit
the antics of "NoCWTest", "Lenover21", "Lenof21", "AveryFine", etc etc etc.

Especially your rather liberal use of Nazism allegations, along with
others.

>Everyone knows that K8MN doesn't give a "rat's ass" for
>any opposite opinion. That is quite obvious.

Obvious only to you. Because he, like I, has had the temerity to stand up
to your bullying.

>K8MN wants others to do his homework. He would rather
>have fun insulting others and making sarcastic comments.

Nope. Youa re the one who makes frequent assertions, and then when asked
to make good on your refrences and basis for same, make snide comments like
"YOU look it up."

Coward.

>>I have read them.
>
>All of them?!!? Parts 0, 1, 2, and 97?

What does it matter, Lennie..?!?! YOU have demonstrated that YOU have a
lack of currency in more than one supart of the R&R's.

>Read them again. Comprehension will come with study.

Words you should follow, Oh Licenseless one.

>Thank you for all the non-discussion of amateur radio
>issues.

Well, Lennie, how can we discuss something with someone who himself only has half the information?

You repeatedly demonstrate that you are NOT "fluent" in practical Amateur matters, and you have no experience base from which to discuss matters.

Come back when you have something to discuss.

It would seem that you do not have, anywhere, obtaining an amateur radio
license as an objective.

> >You'd rather fill the time by haunting an amateur radio newsgroup.
>
> No. I am not "haunting" anything, just advocating the

You're not very observant, Len. That is what I do *to you* in here.
The reasons for it are obvious to most anyone reading one of your
diatribes.

> >You wouldn't
> >even need pass a code test for one particular class of amateur license.
> >You haven't even bothered with that. You're a lonely old wannabe.
>
> Incorrect again. K8MN assumes too much and is getting
> obsessive with the "shut up if you don't have a license" ploy.

You can write "incorrect" as often as you like. The evidence is
contained in the stuff you write and it seems pretty clear.

> >No one who is not obsessed with amateur radio posts for years on an
> >amateur radio newsgroup when he himself is not even a radio amateur.
>
> My "obsession" (if Heil insists is the operative word...and it
> is not) is to advocate the elimination of the morse code test.

Why would a rational adult male take on the task if he had no obsession
with amateur radio? If you had any serious intent toward obtaining a
license, you'd have likely accomplished it by your seventh decade on the
planet.

> K8MN cannot argue that subject, insists that one "must"
> have an amateur radio license in order to discuss changes
> to the amateur radio regulations.

Len, the situation regarding elimination of code as a testing element
are pretty clear. Since that is the case, why do you persist? If you
are interested in obtaining an amateur license, go the code free route.
When the morse testing element disappears, attempt to pass a higher
level. No one has prevented you from making your statements. You've
made 'em (mostly the same ones repeatedly) often. Maybe I can have a
T-Shirt made for you: "Ham Ticket B4 Silent Key"

> >As I've stated in the past, Leonardo, I'm superior to some--inferior to
> >others.
>
> No, it comes across clearly that K8MN is superior to all that

I'd really be interested in knowing which part of my statement you find
that you disagree with. Do you know more about foreign policy than you
do amateur radio? Do you know a great deal about amateur radio?

> --------
>
> >I could set myself up as an unasked and unwanted advocate for the

> newsgroup and astronomers do not need to take morse
> code examinations.

That's right. I'll have the franchise on haunting astronomy newsgroups
as one who knows little about astronomy. You can hold forth here as the
guy who knows little about amateur radio. What? Your'e already doing
that?

> >As I stated earlier, there is a difference between talking about

Len, YOU get insulted because of your manner. All of the things you
accuse others of doing, you are guilty in spades of doing yourself.
There is nothing except yourself standing in your way in obtaining an
amateur license. The lodge hall is only closed to those who make no
effort to obtain a license. If you stand on the outside, looking in, it
is because YOU have made that choice. As you are so fond of stating,
TS.

> >lodge hall. Based on your track record, we won't be seeing you at lodge
> >meetings any time soon.
>
> Based on K8MN's track record he has turned off many

Your statement was designed as another attempted slam at the ARRL in
order to make it seem that the League is really trying to make it sound
as if astronauts were hams first. Nobody but you seems to care either
way but your crap about the "spin" is just that.

> >You're the one with all of the time. Research it and get back to me.

>This new thread is really a continuation of an old and tired
>thread wherein a few regulars in here have some kind of
>need to attempt humiliation and denigration of those who
>have and do propose changes in amateur radio testing.

Actually, the new thread is a continuation of the few regulars trying to tell Lennie to take a hike, and come back when he has some common experience to discuss with the LICENSED Amateurs in here.

>When these regulars (all PCTAs) cannot get their opinions
>cherished and respected, they turn to the very visible
>personal attacks on individuals holding opposite opinions.

Ooooops...NOT "all PCTA's".....

Herr Anderson likes to call people thugs, Nazi's and "elitists" when THEY don't agree with HIM.

Again, Lennie has the pot/kettle/black thing going on.........

>This was true before FCC 98-143 and it continues well
>after FCC 99-412 (restructuring).

Yep..sure does...You were two faced before restructuring and you are now...At least you are consistent.

>They must have their way, ergo everyone is subjected to
>their insult postings

There you go again! Pot/kettle/black.

>I will not take any sort of "blame" for
>causing the personal insults directed toward anyone but
>neither will I sit silent while such immature juveniles
>cannot civilly discuss issues.

Let's see....you send people e mails trying to sway them to your "view", then you call them names in public when they decline to join you.

You then put on your cloak of indignation when they "return fire", as if you were just sitting there innocently and without culpability for your own actions.

>No one should tolerate bullies...

Which is why just about everyone here does not have a lot of patience or tolerance for your antics, Oh Putzy One.

>...yet at least one such insists that all must do as
>he did before discussing anything about amateur radio.
>

Nope...Not "do as (he) (I) did"...just have some practical experience in the matters of Amatuer practice.

The "code issue" left YOU behind a long time ago. Now trolling is all you have left.

4171. Where's The New Yaesu, Lennie?

Just wondering. You were bragging the other day about having all that money with which to buy new radios. When I pointed out that all you'd have is a rather expensive receiver, you shut up.

Guess the realization that having no license made your suggestions pretty foolish, huh?

But you go right ahead...Load the "shack" up with lot's of expensive play pretties...then tell us about all the contacts you made after you cranked the power down to Part 15 levels (or worse yet, you cranked the power up on 11 meters)

Guess this lil ole Yaesu FT757GX isn't as pretty, but hey, I can LEGALLY emit RF with it...How about you...?!?!

You have your opinion and I have mine. I find Nostradamus much
more interesting than Asimov. "Interesting" has nothing to do
with track records and correctness.

Jim:

Don't look now, but I don't think the same amateurs were working
both shifts each day. I think they had one crew "on" and one
crew "off." Great idea, eh?

>Trivia quiz: What were the sister ships, and what happened to them?

Jim:

The Titanic's sister ships were the Olympic and the Brittanic, and I believe both joined their sister Titanic at the bottom of the ocean, albeit with far less loss of life in each case.

>> And according to Popular Science, one company IS building a replica
>>"Titanic"..wouldn't THAT be the pits!

Why would a replica of the Titanic be the pits? I would think that it would be an intriguing and popular historical artifact, not to mention a virtual license
for it's owners to print money! Are we talking about an actual sea-going ship here, or a permanently docked "floating hotel" like the Queen Mary in Long Beach?

>I'd love to be one of the radio officers.

Perhaps the "New Titanic" will have a radio club and permit guest operation by hams.

What are the odds...?!?!

De K4YZ

Look at this:

The date of the attack: 9/11 - 9 + 1 + 1 = 11
September 11th is the 254th day of the year: 2 + 5 + 4 = 11
After September 11th there are 111 days left to the end of the year.
119 is the area code to Iraq/Iran. 1 + 1 + 9 = 11
Twin Towers - standing side by side, looks like the number 11
The first plane to hit the towers was Flight 11

I Have More.......

State of New York - The 11 State added to the Union
New York City - 11 Letters
Afghanistan - 11 Letters
The Pentagon - 11 Letters
Ramzi Yousef - 11 Letters (convicted of orchestrating the attack on the
WTC in 1993)
Flight 11 - 92 on board - 9 + 2 = 11
Flight 77 - 65 on board - 6 + 5 = 11

I have monitored 75 AM regularly since at least the early '90s. He has been a regular there at least that long. Also heard on 40 AM.

>
>Anyone in this group rember the WA1HLR "slime-o-tron?
>
Have heard that and worse.

He and Riley had at least one face-to-face meeting at a hamfest - Dayton 2000, I think it was. Saw the picture in Electric Radio.

I find some of the stuff I've heard to be "funny" and some of it to be objectionable to the point of obscenity. I'll let others argue over the legal definitions. The big question is, what on-air conduct is acceptable in ham radio? I say that if it's not "G-rated", it shouldn't be on the ham bands.

Some folks point to the broadcast media and shows like Howard Stern's and say that the standards for the ham bands should be the same. I disagree. Broadcasting is entertainment, and schedules are published beforehand. One can avoid objectionable shows by reading the schedule. The same is not true of the ham bands - except in rare circumstances, one doesn't have any idea what the content will be until too late.

One of the things that got me started in ham radio was listening to the AM gang on 75 in the mid 1960s, before I was even a teenager. How many parents today would encourage their 10-to-12 year old kids to become hams after listening to some of the stuff heard on the amateur voice bands?

Couldn't be Stalin, Mao Tse-tung, or anyone else who has died. Might
be Saddam Hussein if he fulfills the prophecies. Erica Cheetham, a
Nostradamus expert, thinks the third anti-Christ will arrise in
Western China. No other nation could presently field the army numbers
prophesied in the Bible.

I agree wholeheartedly. One thing to keep in mind is that the world
has changed; a large part of it is now under democratic rule of law,
with a semi-international system of justice. We need to take
advantage of this, as much as possible. Let's act in such a way that
we strengthen international democracy and rule of law. In the long
run, we'll be safer and our children will enjoy a better quality of
life.

>
> The way to address terrorism is as a criminal conspiracy, not an act of war.

> measure of legitimacy that they do not deserve.

I'm not sure I can agree with this completely. The people who did
this *are* a military organization, and their actions are at a scale
that calls for the force only whole nations can deliver. Furthermore,
they are clearly supported by several rogue states. The Taliban is
essentially an extremist military government, for example.

>
> Striking back blindly simply makes our case weaker in world opinion. And
> instead of destroying the terror organizations it will make them stronger
> because the difference between us and them will be lessened.

Absolutely -- we must tread carefully, building consensus and
coalitions along the way.

I see the appropriate response as a combination of overwhelming police and military action. This is the sort of crime that simply *cannot* stand -- the scale is simply too massive. You can afford to commit only some forces to stopping murder or robbery. This is different; we just cannot afford to have crimes like this repeated, nor to have the people who are willing to commit them wandering free in the world.

It's important to remember that some people's goals will always be at deadly cross-purposes to our own, no matter how benign our actions. Yes, we can minimize pissing people off around the world (far better than we have, IMHO), but there will still be some people (for whatever reason) for whom that isn't enough. I would submit that (for such people) credible deterrence must be an option, and to maintain that we must be willing to fight rather than bargain.

For that reason, I cannot condone the notion of bargaining with the bin Laden's of the world -- the whole reason we are a nation would be at stake.

Jonathan

>If it had happened the day before or the day after someone could
>come up another set of meaningless numbers. Please explain why
>you think those numbers are significant.

Now...WITHOUT the "hugeness" of the incident ON September 11th, it would have never come to anyone's attention...

However, tie in the numbers of people on the aircraft, the dates, etc etc etc, it is very significant...

Now...we need to figure out WHAT the "11th" or "11" by itself means.

I wonder how many "men" sit on the council of the Taliban?

Steve

Jim,

What you say is interesting. Although I have not monitored 3.880 /85
much since I have been in Kentucky (23 years) I have not heard him.
I agree that some of the stuff on the bands was pretty bad but the
situation seems to be getting better. The problems on 14.313 seem the be
almost cleared up and the viterol on 3.950 has quieted down a lot. WA4D
has been contained along with a number of his cohorts. Although Riley
gets some flack in this group I think he has mad a difference.

Tim's brand of "potty humor" could sometimes be funny especially when
you were a high school or college student in the early 70s with a bit of
an anti establishment bent. I would have thought he would have grown out
of it. On the other hand, there was a lot of good technical information
to be had in the 3.880 am group and I certainly learned a lot there. Tim
was a pretty large contributer in that way. In many ways I was sorry to
see it come to this.

I couldn't help replying to this one. I was on 440 FM (which is really great here in Rochester, NY) and managed to talk to a station (and I've been wondering ever since) who said his 'preferred personal' was ...
I did not try and correct him (hey, after getting my ticket back after nearly a quarter century - and used to HF - I timed out repeaters 2 or 3 times before I got the drift!). You have made an excellent point. Santa has promised me faithfully a new HF rig this Xmas. I was looking for my first SSB contact, but, I think I'm going to fire up on A1 - heck, I still won't have problems at 30 or 40. I just wish I was back in the shape I was in the Navy when 40 WPM meant perfect copy for many minutes on end.

Steve:

What if it were eleven? So what? Big friggin' deal! In virtually every major disaster, the "psychics" and the "number crunchers" have come out with similar numerology linking the tragedy to the repetition of certain significant numbers. However, I guar-un-tee you that if the airports had been socked-in with bad weather on 9/11/01, that the attacks would have taken place the next day, or next week, or whenever. Then, the numbers would have been different, but you would still have posted some silly nonsense about them!

Typical, weak-minded, dumbed-down, politically-correct American.
She's probably some Soccor Mom in a minivan who has no problem
with killing unborn babies or confiscating the guns from law-abiding
citizens. A true Clinton supporter, to be sure.

We are now at war against terrorism -- not just the terrorists
responsible for the acts of September 11 -- but the *whole* of
terrorism, everywhere. This includes *all* those who condone,
support, and enable terrorists, including this woman! She should
be placed in a special concentration camp for terrorist sympathizers,
deprogrammed, and be forced to listen to Lee Greenwood singing
"I'm Proud To Be An American" all day, every day, for ten years!

So the hijackers went from plane to plane making sure that the one they chose to hijack the number of passengers could be worked out to the number of 11. The only meaning of 11 is that it is one number after 10 and one number before 12, nothing more. You must watch a lot of those psychic networks.

One of the planes was flight 93 or had 93 passengers. '3' in binary is
'11'.

Actually (if she's the one I'm thinking of) she's a
consciencious-objector-style pacifist.

You know, I understand Larry's reaction, but I really can't agree with
it. One of the things that sets us apart from the bin Ladens of the
world is the fact that Americans tolerate differences of opinion.
Osama, by contrast, kills people over them. I think Larry and I would
agree that sitting down with bin Laden isn't an option (unless part of
an assassination plan, perhaps). But I disagree that this woman is
"weak-minded", "dumbed down" or a "terrorist sympathizer". She's
simply a pacifist, and a political activist, to boot.

I think her beliefs are unrealistic, but she has a right to them and a right to express them. And I would submit it takes courage for her to do so: she *did* lose her husband to those bastards, remember.

If you take the Beatles wacky song #9 and add to that the number of sides
of the record GASPPPPPP 11 !!!!!!!

If you add the total number of toes that LHA has GASP!!!! 11

If you add up all the stories Cecil has for any and every situation
GASP!!!!! 11 !!!!!!

If you rank this thread from 1 to 10, with 10 being the wackiest GASP!!!
it's an 11!!!!!!

A bit of a challenge to all out there. That idiot terrorist - what is his name?? Bin Laden?? Sounds like a particularly stupid name to me. How about coming up with some different versions of it?? I have a couple to start the ball rolling, Bin Liner (pretty lame, but it is a start), and in the lingo of my workplace, and bin is also known as a shit tin - which to me is a pretty reasonable name for that arsehole. Any takers for the challenge??

>

I had that species of nun too. No mercy if you forgot your homework.
I used to get punished for stuff I didn't even do.

We also had male nuns. "CFX" out of Boston. Ex marine corp drill
sargents.

Many of the teachers just had us read aloud in turn one paragraph out
of the text book, then the next kid would read the next paragraph, etc.
Didn't think you could do anything else in a history class.
I would get bored and read ahead to the end of the chapter, which
wasn't too smart as I'd loose track of where we were when it
was my turn to read aloud my paragraph. I was thus labeled as
a retarded reader and ended up in the "poor" reader group. I had
to attend summer school reading class, which I thought weird in that
the teachers didn't routnely beat the crap out of the kids.

I had a civilian science teacher who didn't know sh_t about
science. Not that it mattered, that material didn't show on
the yearly computer scored achievement tests. They taught to
the tests, so lots of emphasis on grammer but *none* on actual
writing skills. We wrote grammer test patterns.

We called the school "the prison". Some kids actually tried to
set fire to it to burn it down, but failed miserly. Principal
was pissed, hit them with his 15 inch ruler a lot.

We always hoped that unannounced fire drills were the real thing.
(Yes, they used to announce fire drills in advance until someone
in the fire dept cried foul.).

Once I pissed off a male nun. He had me stand in front of the
class and hold out my hand to be whacked by the blackboard
pointer. Mama didn't raise no fool, I pulled back and the
teacher missed and broke it on the floor. No, he didn't make
me pay for a new one, though.

Automobile license plates. The ham call does serve as an ID for call sign
plate (special services).
It would be interesting if the one ued his ID as a vanity plate and the
other applied for a "special services" call sign plate. (in the same state)

Fineman, drawing a comparison with Winston Churchill's defiance during World War II, quoted the president as telling the Senators: "When I take action," he said, "I'm not going to fire a $2 million missile at a $10 empty tent and hit a camel in the butt. It's going to be decisive."

Oh, come on. Maybe they want a shorter callsign, or they want to study
more about amateur radio, or they don't want to have restricted
privileges, or they want to be able to administer FCC exams, or they
want to just 'get it out of the way', or they want their license class
to reflect their knowlege of amateur radio.....

I know lots of techs who won't upgrade even after

I can't vouch for other states, but in California DMV will not issue
a ham call plate unless the applicant can show that s/he or another
registered owner of the vehicle holds that ham call, and will not
issue a "vanity"/"environmental"/"personalized" plate that has the same
format as a ham call, even to the ham involved. They will issue a
"personalized" plate that has the ham call followed by a numeral to
the ham holding that call sign for a second vehicle.

The number 11 could be a good number on a crap table WOW What are the odds?

The is a hotel called NYNY.

NYNY as a rollar coaster and Geroge Segal stared in a Movie Called Roller Coaster about a terrorist blowing up rollare coasters and there are 11 letters in George Segal.

Wayne Newton = 11 leters, and he is called MR. Las Vegas

A ten and ace can be 11 or 21 on a black jack table. WOW!

The 11 largest casinos in Las vegas are on the strip! Mandalay Bay, MGM, Luxor, Excaliber, New York New York, Venice, Mirrage, Treasure Island, Ballagio, Monte Carlo, Paris,And they have 11 of the largest buffets and also 11 of the largest parking lots, and 11 swimming pools,
And they are in a desert.

Lets not forget CBS news, NBC news, ABC news, And FOX news, Have new offices in New York, Take those Four Net works add the number of letters each of their names 4+7=11

Ok. I think this thread has gone on long enough. It really doesn't
have anything to do with Amateur Radio, nor the use of Amateur Radio.
I am not going to say that I don't agree with some of the people here,
but it would be better for us as Amateur Radio Operators, to show the true
spirit of our hobby by helping out with communications in any way that we
can.
I personally, have been helping out with the ARRL's National Traffic
System, but at this time, it appears that all communications have been
restored to the area. I was hoping to hear from people close to the
disaster, who could tell their own personal stories on the use of Amateur
Radio in the rescue efforts and with the survivors.

A mentally healthy person's ego is not tied up in his/her ham license.
A tech license completely satisfies the needs of a lot of hams.

> I used to get punished for stuff I didn't even do.

IHM nuns had them beat. They would punish you for things you might be
thinking of doing.

I remember nuns who used to interrogate every kid who had been out
sick. Did the kid stay in bed all day? Did the kid have a fever? Did
the kid throw up, watch TV, eat regular food, etc., etc.? A wrong
answer would result in a beating or a long tirade about faking and
lying. Sick kids would drag themselves to school and spread their
disease through the class.
>

> was my turn to read aloud my paragraph.

I had nuns who did this EVERY day for EVERY subject. They would call
out a kid's name and that kid would have to read until another kid's
name was called - often in mid-sentence. Any kid who wasn't ready to
go on the next word got a beating. "Excellent teachers"? "Instilling
discipline and values"? Pure BS.

Seeing as how I read several grade levels above my age, the above
"teaching method" was pure torture.

> I was thus labeled as

They added science to our curriculum in the early '60s as a result of Sputnik. Same sort of joke. One day in 4th grade the teacher caught me reading a non-textbook. It was an electricity book, open to a page on polyphase induction motors. Which I tried to explain, with predictable results.
>

Chanting "Burn, baby, burn" didn't endear us to the nuns, either.

> Once I pissed off a male nun. He had me stand in front of the
> class and hold out my hand to be whacked by the blackboard
> pointer. Mama didn't raise no fool, I pulled back and the
> teacher missed and broke it on the floor. No, he didn't make
> me pay for a new one, though.

IHM nuns would have made you buy TWO new ones, then beat you with both of them. Once for the initial offense and once for pulling your hand away.

Being of Italian descent did not help in a place where the nuns and priests were overwhelmingly Irish, either.

--

I thoroughly enjoyed John Gregory Dunne's "True Confessions", too. One of my favorite lines: "Sister, I hope all of your sons grow up to be Jesuits."

You asked why anyone who was satisfied with UHF/VHF would upgrade, and I
gave you some perfectly valid reasons why they might. Disagree all you
like, but you are arguing against the truth.

Every state I ever lived in allowed the same plate on all the Amateur's
cars. Minnesota puts a little number on multiple plates. In Wisconsin, it
was the only case where the same plate could be on multiple cars; drove the
gendarmes nuts but they had to have a little book to keep track of all the
goofy plates anyway.

One good thing about a is that the ham plate is the only place you will
see it; no vanity plates, no airplanes. It drives the gendarmes banannas as
well when you aren't in zeroland.

They found their way into grammer schools in NJ. One was
making a big deal about his title or degree or whatever it's
called, the "CFX" appended to his name "Brother xxx, CFX".
My father said big whoop, it's just a 6 month program to
complete.

Well, they missed the mark on that one on me for sure. The "real"
message I copied was "People in positions of authority cannot
be trusted, they will abuse you".

I remember in reading class a story about a kid who somehow
got an apple stuck in his pants pocket. He was afraid that
his mom would be pissed. And that the kindly nun teacher
came to the rescue with a solution: cut the apple apart and
remove individual slices. Of course the real solution would
be to unzip the pants and lower them to loosen the pocket,
but you can't do that in Catholic school. Anyway, I thought
the story unrealistic in that I'd fear the nun a lot more than
my mom.

I'm sure you mean well but no hams should have been going on site to
respond to the event if it were merely to go and be a ham.

Last I heard from the ARRL, 4 hams are known dead, three worked in the
Center and one was a police officer responding to the scene.

>countries. Leaves a real nasty in their mouthes.

At this point in time, the US could do anything at all and there would be very few countries complaining about it. Over the next few years there will be cells of terrorist that will just disapear. No one will be able to prove what happened to them, and most people will not care. They will just be gone. One thing we do not want is putting them on trial, that would lead to more terrorist attacks.

>
>You're kidding, right? FCC couldn't car less, much less support anyone's
>"position".

Dick:

Precisely. The FCC made it clear that they would abide by a
consensus of the amateur community. The best source for such a
consensus would have been the advice of the national organization
of U.S. radio amateurs -- the ARRL. If the ARRL had resolutely
supported the status quo in code testing, we'd still have it, and
always would. The ARRL leadership took the gamble on allowing
the FCC to have it's way, without going to the boards to preserve
the status quo in code testing, in order to hopefully secure it's
future with growing numbers of new hams and potential members.
Now, almost a year and a half into Restructuring, we're seeing the
lie put to this notion. The ARRL has appeased the lowest common
denominator, and they have responded with their usual apathy and
inaction.

>have to encourage people into the mode?

Ed:

Just as Dick said, a "milquetoast approach of coddling them into an 'understanding' that it is well, a 'fun' thing to do…" There certainly will no
longer be the incentive of increased operating privileges.

>Unfortunately, by then, we will have to
>take back all of the things you have said about no one being willing to learn
>it unless forced.

That would be true only if people had ever actually *been* "forced" to learn the code. It was always a voluntary, elective option; there was never any "force" applied whatsoever. Being a licensed radio amateur, or a licensed radio amateur of any particular privilege level, has never been a life-or-death decision for anyone, therefore, no "force" was used to compel people to become licensed radio amateurs. This "force" is merely the sniveling, childish whine of the lazy, unmotivated NCTA's. Naturally, due to your job requirement to be "politically correct" WRT code testing requirements, you must embrace this concept of "force." We understand, and will never say that you aren't a totally obedient, line-towing "company man" of the ARRL HQ staff. In fairness to you, if I worked there, I'm sure I'd have to be one myself.

>Do you believe that if there never was a code test, the
>words you are saying now would help people get into the mode?

If there never was a code test, people would have stopped using CW completely several decades ago. At the very best, there may be a small handful of CW users, but they would not have any exclusive subbands, and would have to operate amid high-power phone QRM.

The testing requirement is what made the CW mode as popular as it is today. In the absence of the testing requirement, it's popularity will eventually subside, and it's use will taper off to eventual nonexistence.

If YOU think that newcomers can be brought into the CW mode in large numbers by the enthusiastic promotion of current users, then why don't YOU show us how it's done? And don't turn this back on me, or Dick, or any other PCTA, because by definition, we don't think it's possible. NCTA's like you, Cecil, Bill, et. al. think that CW can survive without a "government welfare program." Prove it.

Maybe it is a generational thing, Larry. I know it stirred up a lot of flashbacks in me and I didn't do the Nam personally; my military career is parallel to Dick Cheney's. I think her question and mine is whether we really know what we are doing, why we are doing it, and whether we will not in the long run of things make things worse.

Nothing politically correct about it. Just a generation that lost 56k dead and a lot more messed up when we had no idea what it would look like if we won. Put your Dymo label-maker back in your pocket.

All hams are required by circumstances, i.e. forced, to meet the FCC
requirements. You, yourself, posted a definition of forced = required.
That means that all present HF hams were forced to pass a Morse code
exam.

> ... therefore, no "force" was used to compel people to become licensed
> radio amateurs.

That's true. But force was used to compel amateur radio operators to
meet the FCC requirements. Operating an amateur radio station without
meeting the FCC requirements is illegal just like driving a vehicle
without a driver's license is illegal. People who obtain the privileges
granted by the government are forced to meet the governmental
requirements.
The cause of the privileges is the meeting of the requirements which are
NOT optional.

> If there never was a code test, people would have stopped using CW
> completely several decades ago.

That might be true for you, Larry, but it would not be true for me.
The only reason I got a Conditional license was to be able to
continue using CW.

> NCTA's like you, Cecil, Bill, et. al. think that CW can
> survive without a "government welfare program." Prove it.

Be patient, Larry. It is impossible to prove right now but it should
be possible to prove it in a few years.

Sure it is. It's just not overly tied up with it. License class is just one
data point, as it were.

>A tech license completely satisfies the needs of a lot of hams.

Then why are the numbers of Extras growing and the number of Techs decreasing?
See

http://www.ah0a.org

and note that the number of Techs peaked some months back and is now
decreasing. (The number given is actually the sum of all current Techs, "Techs

with HF" and Tech Pluses in the FCC database).

"Better" in what way? That he was more friendly to the West?

The people of Iran didn't think the shah was better. That's why they tossed him out. They were radicalized against the West in general and the USA in particular by the shah's repressive regime.

> A similar thing
>could have happened to the Iraq alliance puppet.

If he behaved like the shah did surely.

>IMO, they left Saddam
>in power because they didn't want another Iran.

And the result is that we have a continuing military presence in the region, and specifically in Saudi Arabia. Iraqis continue to suffer under Saddam's repressive regime. Our military presence has radicalized folks like bin Laden against the USA.

All in the name of cheap oil.

Personally, 2x1 calls don't sound like real ham calls to me.
Calls that start with an 'A' or 'N' don't sound like real
ham calls to me. Personally, I would much prefer any 1x3
call starting with a 'W' to a 2x1 call starting with an 'A'
or 'N'.

> >>or they want to study more about amateur radio,
> >

> >Or maybe they don't. Lots of extras don't.
>
> Lots want to.

We're not discussing hams who think like you, Jim. We are discussing
hams
who are 100% satisfied with a tech license. Please pay attention to the
context.

> >A tech license completely satisfies the needs of a lot of hams.
>
> Then why are the numbers of Extras growing and the number of Techs decreasing?

We're not discussing hams who think like you, Jim. We are discussing
hams
who are 100% satisfied with a tech license. Please pay attention to the
context.

> and note that the number of Techs peaked some months back and is now
> decreasing. (The number given is actually the sum of all current Techs, "Techs
> with HF" and Tech Pluses in the FCC database).

Please pay attention to the context, Jim. We are discussing hams who are
100% satisfied with their tech license. Are there hams who are 100%
satisfied with a tech license? The answer is yes. I know a lot of them.
Your arguments are irrelevant when referenced to the present subject
which
is the set of hams who are 100% satisfied with a tech license.
--
cheers, Cecil

I have no doubt that things must get worse in at least some ways before they get better. But it is more than clear that Bin Laden & co. have as their agenda the same idea that Hitler had- Wipe out the opposition to our agenda, worldwide, and strike the biggest threats first and hardest.

>

Your (and my) generation had LBJ and his own agenda to deal with. Make no mistake, that was LBJ's war, to "fight" as he saw fit. And for us to lose for him. Once he realized what it was that he had done, he was powerless to do anything effective to correct it, and he died steeped in his own selfrecriminations.

FCC seems to be supporting the "less admin work for FCC" position
pretty strongly nowadays.
>
> Dick:
>
> Precisely. The FCC made it clear that they would abide by a
> consensus of the amateur community.

Not exactly.

For several years before restructuring, the FCC said they weren't
going to change anything unless there was a consensus in the amateur
community about what to change and what to keep.

Then they tossed that policy in the junkheap and started the
restructuring process. FCC wasn't going to wait for a consensus
anymore.

> The best source for such a
> consensus would have been the advice of the national organization
> of U.S. radio amateurs -- the ARRL.

For decades, ARRL membership has hovered at about 1 in 3 US hams,
based on the FCC license numbers. Considering the fact that some hams
are totally inactive, an educated guess would put ARRL membership at
about 1 in 2 active US hams. A slight majority, perhaps, but not a
consensus.

> If the ARRL had resolutely
> supported the status quo in code testing, we'd still have it, and
> always would.

Nope. No way. Just look at the history.

FCC has been pushing the nocode agenda since 1975. ARRL BOD opposition did not stop medical waivers in 1990. ARRL's idea for a nocode VHF/UHF license was ignored and the FCC just dropped the code test for Techs in 1991. FCC just doesn't want the hassle of code tests.

In fact, I think the FCC wants to get rid of code tests for ham licenses so that at least some folks who are now "freebanding" or using cb as a hobby will become hams.

> The ARRL leadership took the gamble on allowing
> the FCC to have it's way, without going to the boards to preserve
> the status quo in code testing, in order to hopefully secure it's
> future with growing numbers of new hams and potential members.

Nope. The BOD was divided on the issue, and the resulting policy was a compromise. Director's opinions ranged from total nocode to no change at all. The directors are elected by the members, by the way.

> Now, almost a year and a half into Restructuring, we're seeing the
> lie put to this notion. The ARRL has appeased the lowest common
> denominator, and they have responded with their usual apathy and
> inaction.
>
Nope. FCC simply did what they wanted to do all along - reduce code testing to the bare minimum allowed by treaty, and reduce admin work for themselves. Simple.

FCC doesn't care if CW or code testing survives or not. They don't care if the ARS grows or not. All they want is an orderly ARS. The rest is up to us.

In article <3BA42F3C.64993C80@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>It would seem that you do not have, anywhere, obtaining an amateur radio
>license as an objective.

Ah, managed to remember something I said long ago and not
so long ago? Good for you.

I might have thought it would be fun a dozen years ago. Given
the clearly demonstrated "warm openness and civility" of the
PCTAs it is growing ever unlikely that I would.

>Why would a rational adult male take on the task if he had no obsession
>with amateur radio?

So, Heil cannot fathom anyone not thinking/desiring/whatever
as he does? Or is it brainwashing of all that propaganda in
ham literature that the "best" ham thing is CW on HF? :-)

Why is OOK CW so esteemed, elevated to a high, ivory
pedestal so high that the PCTAs give morse code ability
a divine, god-like attribute?

All other radio services in the world have rejected OOK
CW codings as being "best" for any reason. Some
amateurs still cling to that notion. Why?

Answer: It boils down to every newcomer having to do
just as the PCTAs did or be subjected to personal ridicule
and denigration. PCTAs cherish their morse ability and
point to the "law" as if the "law" were immutable. They
also point with undue pride to themselves stressing
"legality" as if they were mighty standard-bearers of the
only Truth and Justice. :-).

>Len, the situation regarding elimination of code as a testing element
>are pretty clear. Since that is the case, why do you persist?

It is NOT clear. Go to the FCC international bureau pages
and read the IWG-6 drafts made so far. The S25.5 action
item has no action at all yet...it is tabled for further "study."
Pfaugh...tabled because the Vice Chair hasn't received
"orders" from Neu England?

>If you
>are interested in obtaining an amateur license, go the code free route.
>When the morse testing element disappears, attempt to pass a higher

>level. No one has prevented you from making your statements.

I am advocating the elimination of the morse code test for
any amateur radio license. It's not a personal issue. It is an
issue which affects the future of those not yet in amateur
radio.

Whatever I do or anyone else does about a license is not the
issue. Elimination of the code test affects the future in amateur
radio and that future is for everyone. Everyone. Not just
set-in-their-ways individuals dreaming alone in front of their
radios, maintaining "Newcomers have to by-#$!!! do it like *I*
did or go to $#%!!"

>Maybe I can have a
>T-Shirt made for you: "Ham Ticket B4 Silent Key"

Heil makes insensitive cloddish statements. Everyone will
die.

My life ambition has very little to do with "getting a ham ticket."
That isn't the issue, but Heil, not being able to effectively
counter the NCTA statements, has to make it an
imaginary "personal" case.

My life does not center around amateur radio nor will it.

Amateur radio can be a fun hobby, but it is still a hobby,
not some quasi-military, "follow orders" lodge hall "service."

[that "service" word is not a regulatory term]

Others think differently, but then others should not attempt
to shove their personal desires down everyone's throat by
any means.

>I've encountered no one else with your attitude.

Wrong. If you've read everything in here, there have been
many who have been forthright in their opinion of the code
test and were not swayed by bullying PCTA control-freaks.

I've been trying to decide who was worse, KH2D or K8MN.
I'll give Kehler the nod since he was a better wordsmith.
Heil is way too imaginative and cannot telepath.

>You don't have the authority to assign me homework.

Heil has NO authority on anything...yet he persists in
demanding others to do things his way or be the subject
of personal-attack ridicule..

>> >> >It is possible to be both patriotic and an insensitive boob, Len. I
>> >> >offer you up as proof.
>> >>

>> >> >You are not the run-of-the-mill insensitive boob; you are perhaps the
>> >> >ultimate insensitive boob.
>> >> >
>> >> >Blow is out your ass, Len.

>I'm sure that makes a lot of sense to those individuals. That's
>probably why they've told you to blow it out your ass.

Heh heh, that's what is expected. A calm, reasoned impersonal
discussion on the issues. :-)

From: lenover21@aol.com
Message-ID: <20010918121242.27641.00000448@nso-fk.aol.com>
Source record: 20548

In article <20010916020523.20841.00000570@mb-cu.aol.com>, k4yz@aol.com (Steve Robeson K4YZ) imaginately or in a haze of something writes:

> Just wondering. You were bragging the other day about having all that
>money with which to buy new radios. When I pointed out that all you'd have
>is a rather expensive receiver, you shut up.
>
> Guess the realization that having no license made your suggestions
>pretty foolish, huh?

No. We were gone Sunday and Monday. Robeson's little childish message spasms get last attention.

Jim Hall, KD6JG, has a Yaesu FT-1000 in the office room of his house in Cedar Ridge, CA. The number came to mind is all. [I do not commit ham equipment advertising data to memory nor do I have envy of what others have]

Now, put down your toke and think...I mentioned before that my wife and I visited overnight with Jim and his wife there...on the way south from our northern home in Washington state. A lovely visit with gracious and cordial hosts.

Think ever more deeply. I've said at least twice that I have no interest in working HF DX just for the sake of working DX or making contacts just for the sake of making contacts...nor have I any desire for "loading up the shack with lots of expensive play pretties." [that's a rather stupid, denigrating description of any ham's elaborate amateur radio station]

> But you go right ahead...Load the "shack" up with lot's of expensive
>play pretties...then tell us about all the contacts you made after you cranked
the
>power down to Part 15 levels (or worse yet, you cranked the power up on 11
>meters)

For an elaborate amateur radio station, well-equipped (or, as Robeson describes it, "full of play pretties") there are a number of such available on the web. Anyone should be impressed by VE9JY's (?) station with beams (plural) for each HF band, including an 80m rotatable 4-element yagi.

That does remind me to have the HP 608D generator calibrated soon, though, and that will be a good thing. I am thinking about trading it in for a newer model with RF output levelling, but that is another subject.

> Guess this lil ole Yaesu FT757GX isn't as pretty, but hey, I can LEGALLY
>emit RF with it...How about you...?!?!

Robeson is sadly mistaken if he thinks I am "lusting" (as someone put it) for an HF privilege amateur license. He is very confused as to what my aims are in here (so is Heil) which is advocacy of the elimination of a morse code test. I have NO interest in working DeeEcks for the sake of that or collecting a wall full of QSL cards or making high points in one or more of many contact contests. That seems to be all that Robeson or Heil's "thing" and worse, they can't imagine anyone else not wanting to do as they do. If that is someone's bag, fine for them, but it isn't of interest to everyone.

The gummy can get a fresh can of Brasso and shine up those four nerve cells. They are misfiring badly and not interconnected well for memory. Think "Mil Spec" for your future HF rig...that way the gummy could have a "bigger one" than most others and satisfy his personal military desires. :-)

With all kind regards and remember, temper fry,

LHA

You know, I really thought that the statement, "I think her beliefs
are unrealistic", combined with numerous statements on my part in
which I've advocated anything but pacifism, would have made it clear
that I do *not*
agree with appeasement. I really don't know how to make that position
plainer, and frankly, I'd like an apology.

Let me be unequivocally clear: I do *NOT* support bargaining with bin
Laden.
I do *NOT* support appeasement. I have never said otherwise.

My point is simply this: one of the things that makes us better than
the terrorists is tolerance for differences of opinion. Differences
of opinion are not treason, Larry. They make us stronger. You know,
that "I disapprove with what you say, but I will defend to the death
your right to say it" thing? (to misquote Voltaire)

Jonathan

> We are discussing
> hams
> who are 100% satisfied with a tech license.

Nope.

Some posts back, you asked:

"Why would anyone who is 100% satisfied with VHF/UHF-only privileges
bother to upgrade?"

(That's an exact quote).

The reasons given by Jim and I are possible answers to that question.

> Please pay attention to the context.

Please pay attention to the question you actually wrote.
>
> > >> or they want to be able to administer FCC exams,
> > >
> > >Or maybe they don't. Lots of extras don't.

>
> We're not discussing hams who think like you, Jim.

Did I write that I got an Extra in order to be a VE? Nope. In fact,
that could not have been one of my reasons back in 1970.

> We are discussing hams
> who are 100% satisfied with a tech license.

Nope.

Some posts back, you asked:

"Why would anyone who is 100% satisfied with VHF/UHF-only privileges
bother to upgrade?"

(That's an exact quote).

> Please pay attention to the context.

Please pay attention to the question you actually wrote.

> > >A tech license completely satisfies the needs of a lot of hams.
> >
> > Then why are the numbers of Extras growing and the number of Techs decreasing?
>
> We're not discussing hams who think like you, Jim.

That's not the issue at all.

Why is the number of Extras growing and the number of Techs
decreasing? The number of Techs peaked in March of this year and has
been going down ever since.

> We are discussing hams
> who are 100% satisfied with a tech license. Please pay attention to the
> context.

I am. You're not.
>
> > and note that the number of Techs peaked some months back and is now

Nope.

Some posts back, you asked:

"Why would anyone who is 100% satisfied with VHF/UHF-only privileges
bother to upgrade?"

(That's an exact quote).

Please pay attention to the question you actually wrote.

> Are there hams who are 100%
> satisfied with a tech license? The answer is yes.

But that's not the question you asked.

> I know a lot of them.

We're not talking about the hams you know, Cecil. Please pay attention
to the context and the question you actually wrote.

Here's another reason:

A ham who is currently 100% satisfied with VHF/UHF-only privileges may
want to be ready for new developments. I know hams who were 100%
satisfied with VHF/UHF-only privileges right up to the first time they
saw a single-board PSK31 transceiver (like the "Warbler") in action.
Then they couldn't get on HF fast enough. The idea of HF communication
with just a laptop, >$100 computer-controlled rig, antenna and free
software captured their imagination.

> Jonathan

Fixing the clock of those involved is not an issue, the question is how you do it without having your grandchildren fighting it all over again. Our picture of Islam is no better than their picture of us; they watch Hollywood and we get fixated on mullahs.

Whatever one may think of the Taliban, it is ancient Islamic practice to require hosts to protect guests. So do you present your proof to the world and ask not only the Taliban but every leader you can find if Islam requires the protection of guests that crap in the caviar or do you play John Wayne? In the long run of things you are a lot better showing Islam some degree of understanding, respect, and impartiality. Yes, it might even take some advertising: we have not gotten a lot of mileage out of our assists to the Islamic residents of Bosnia and Albanian parts of the Balkans.

The village idiot can fire a $2 million missile, and (as has been so nicely stated) blow up an empty $10 tent while hitting a camel in the butt. Clauswitz to the contrary, warfare is not diplomacy by other means.

The whole point of Restructuring was a modernization of the
Agency and reduction of bureaucracy...for ALL services
regulated by the FCC. That was a mandate from the US
Congress.

>> Precisely. The FCC made it clear that they would abide by a
>> consensus of the amateur community.
>
>Not exactly.

>Then they tossed that policy in the junkheap and started the
>restructuring process. FCC wasn't going to wait for a consensus
>anymore.

Sorry, that's only your telepathic input operating in high
mental QRM conditions.

Public record has the FCC already making its case in 1990
in 90-53 on the creation of the no-code-test Technician class
license.

The US Congress ordered restructuring...for ALL services
regulated by the FCC.

The FCC never closed its doors or offices to ex parte
presentations either from the ARRL or NCI. They made
direct electronic input on Comments available and there
are still over 2600 such comments on 98-143 on public
record.

>For decades, ARRL membership has hovered at about 1 in 3 US hams,
>based on the FCC license numbers.

For the past decade the ARRL membership is about 1 in 4,
not 1 in 3, based on the ARRL's own membership information
as well as the FCC amateur radio license database.

>Considering the fact that some hams
>are totally inactive, an educated guess would put ARRL membership at
>about 1 in 2 active US hams. A slight majority, perhaps, but not a
>consensus.

How is this "educated guess" referenced? By "poll"? By
telepathy? By "credentials" in "educated guessing?" :-)

"Inactivity" applies across ALL amateur license classes,
ARRL membership affiliation or not. There is NO FCC
regulation now or in the past decade that mandates
"some amateur radio activity" as any kind of condition
of the license grant nor can such "activity" be any kind
of factor in being part of a consensus condition.

>Nope. No way. Just look at the history.
>
>FCC has been pushing the nocode agenda since 1975.

That's not visible on the public record or as some kind
of "agenda" in ARRL publications. The ARRL's position
on 98-143 (by public record) indicated they were still
very much in favor of code testing.

>ARRL BOD opposition
>did not stop medical waivers in 1990. ARRL's idea for a nocode VHF/UHF
>license was ignored and the FCC just dropped the code test for Techs
>in 1991.

The FCC did not "just drop it." FCC 90-53 clearly states their
decision on making a new, sixth license class (without a code
test) and why they did it, including quotes from commentors on
both sides of the code issue. That was in 1990, 11 years ago.

>FCC just doesn't want the hassle of code tests.

The FCC had already privatized US amateur radio license
testing by the 1991 no-code-test Technician class, leaving
the VECs and VEs to administer code tests to the

remaining five amateur radio license class tests.

It might come as a shock to the PCTAs, but the FCC does, by all public accounts, really accept citizen input. If code testing was such a "hassle" to the FCC, please explain how it can be a "hassle" when they would NOT normally be a part of the actual test process?

>In fact, I think the FCC wants to get rid of code tests for ham
>licenses so that at least some folks who are now "freebanding" or
>using cb as a hobby will become hams.

Is the FCC engaged, or shoult it be engaged in some activity to recruit hams? This is not in their charter, is it?

The FCC is chartered to regulate US civilian radio and interstate communications.

Here is what the FCC said publicly in 99-412 in opening text:

" 1. By this Report and Order, we adopt rules that simplify the Amateur Radio Service operator license structure, streamline the number of examination elements and, reduce the emphasis on telegraphy that underlies the current license structure to the greatest extent possible, consistent with the international Radio Regulations (Radio Regulations). Moreover, we believe that these changes will: (a) allow current Amateur Radio Service licensees to contribute more to the advancement of the radio art; (b) reduce the administrative costs that we incur in regulating this service and streamline our licensing processes; (c) eliminate unnecessary requirements that may discourage or limit individuals from becoming trained operators, technicians, and electronic experts; and (d) promote efficient use of spectrum allocated to the Amateur Radio Service."

>FCC doesn't care if CW or code testing survives or not. They don't
>care if the ARS grows or not. All they want is an orderly ARS. The
>rest is up to us.

That's a noble enough statement and, in my opinion, a good one. It does, however, go against the opinion quoted above that the FCC is trying to "recruit freebanders or 'cb hams'".

With all kindest regulatory regards,
LHA

>consensus would have been the advice of the national organization
>of U.S. radio amateurs -- the ARRL.

How is a minority group the "best" choice for advice?

ARRL membership is less than a quarter of all licensed US
radio amateurs.

>If the ARRL had resolutely
>supported the status quo in code testing, we'd still have it, and
>always would.

Why should this special interest group support a status quo?

The ARRL supports its membership and that membership is
a minority group.

>The ARRL leadership took the gamble on allowing
>the FCC to have it's way, without going to the boards to preserve
>the status quo in code testing, in order to hopefully secure it's
>future with growing numbers of new hams and potential members.

That's false. On the public record, for both NPRM 98-143 and
Comments after 99-412, the ARRL made its case FOR code
testing. The evidence is there.

>Now, almost a year and a half into Restructuring, we're seeing the
>lie put to this notion.

Public records have not changed. The ARRL has always
supported changed amateur radio regulations after they
became law. Would Roll like to have the ARRL support
illegal activity?

>The ARRL has appeased the lowest common
>denominator, and they have responded with their usual apathy and
>inaction.

:-) This can only mean that Roll thinks of himself as "highest"
and not a denominator, but rather as an uncommon numerator,
"primus inter pares."

With kindest regards,

LHA

>
>I tried but I can't come close enough to the spelling to even
>look it up. Allatolla? Kohmeini?

"Ayatolla" (approximate English equivalent from Farsi) is a
title. "Kohmeini" seems right although some wire services
have Anglicized it as "Khomeini" and refers to his surname
(or clan or sept). Farsi is a syllabic language...as are all
the "Arabic" languages, none of them using the "Western"
alphabet.

Now all that leads to the "experienced pool of trained
operators" that is supposed to be a part of amateur radio.
I'm wondering just how skill in the Western-languages
international morse code is going to help radio intercepts
in Pashtun, the Arabic-based language of Afghanistan?

Ah, yes, morse code is the "international language" of
radio...and "CW gets through when nothing else does."

OK. :-)

>
>Or they might. Or they might want to be ready for any eventuality.
>
>One reason I got my Extra way back when (1970) was so I would be able to
>operate any authorized ham rig/mode/frequency. Many hams think that way.

Over 99% of all amateur radio spectrum is above 70 cm.

There are a dozen allocated bands above 70 cm, ripe for
all kinds of interesting legal allocated mode use.

What has been your experience in these bands?

>>A tech license completely satisfies the needs of a lot of hams.
>
>Then why are the numbers of Extras growing and the number of Techs

>decreasing?
>See
>
>http://www.ah0a.org

Joe Speroni is a PCTA.

The Speroni statistics pages on US amateur radio conviently lump the old Technician-Plus class with the current Technician class. The Technician-Plus class is no longer granted for new licenses. Lumping them with Technician class is a nice way to disguise the Techs as a group as being "decreasing."

Advanced and Novice licenses are no longer granted, yet they are listed separately. It should come as no surprise that those classes are also decreasing in number. The Advanced and Novice license class test required a morse code test.

A look at the NEW, never before issued, license class tabulations show that the overwhelming majority of NEW licensees are the no-code-test Technician class.

PCTAs will rationalize that the Technician class is really "an entry class to amateur radio" and avoid discussing the absence of a code test for that class. The argument against that is that the Novice class was once considered the same "entry to amateur radio" but the Novice class numbers have been dropping for years...as far back as the AH0A statistics site tabulations go in the past. Novice class licensees had to pass a code test.

With all kind regards to a one-by-two,

LHA

Let me remind you of what you said so we might return to the context in which I made my response. You said:

"Why would anyone who is 100% satisfied with VHF/UHF-only privileges bother to upgrade?"

The point you endeavor to circumvent is that someone can be 100% satisfied with their privileges and yet have other reasons to upgrade.

Not so much any more. As you may know, there is a vanity call sign program now. The most popular calls obtained under this program are the short, "long-timer" calls.

> Reminder: The amateur radio written test is in no way any
> sort of academic achievement test.

In many ways it is like one. The amateur curriculum is as comprensive as that of many college level courses.

> Over 99% of all amateur radio spectrum is above 70 cm.

Over 99% of all amateur activity is at or below 70 cm.

Someone, yes. Everyone, no. My point is that there are some techs who
will never upgrade no matter what because they are already 100%
satisfied.

Nope.

She wanted to know what the terrorists want. She did not say whe wanted to give it to them. Entirely different thing.

Do YOU know what they want, Larry? Do you know why bin Laden & co. hate the USA so much?

>Sure she has a right to express her
>beliefs, but we are now in a state of War against terrorism; and her
>"beliefs" are tantamount to treason in a time of war.

How? All she did was ask a question. You don't know what her beliefs are.

During WW2, a series of films were produced titled "Why We Fight" or something similar, to answer the question "Why are we in this war?"

It's not treason or anyhting like it to ask why and what the enemy is after. In fact, one of the most important things to know is what the enemy wants.

>This kind of
>talk only disgraces the memory of her slain husband -- but of course,

> Pfaugh...tabled because the Vice Chair hasn't received
> "orders" from Neu England?

It IS clear but this isn't microwave oven ham radio. There is no
"instant" anything. There is a laughable 5 wpm test in place for any HF
license. Your last sentence, I suppose, is another of those non-slams
at the ARRL which you don't make.

> >If you
> >are interested in obtaining an amateur license, go the code free route.

Anyone can become a ham. That is true today. That has been true in the
past. I assume that it will be true in the future.

> >Maybe I can have a
> >T-Shirt made for you: "Ham Ticket B4 Silent Key"
>
> Heil makes insensitive cloddish statements. Everyone will
> die.

Not all will die without ever attempting to obtain an amateur ticket.
While I've not achieved every goal I set for myself in life, I took a
stab at all of 'em.

> My life ambition has very little to do with "getting a ham ticket."
> That isn't the issue, but Heil, not being able to effectively
> counter the NCTA statements, has to make it an
> imaginary "personal" case.

It's not an imaginary personal case, Anderson. It's a real personal
case. Since your Extra ticket out of the box now seems less important
to you it makes sense to re-evaluate your goals. Settling on being an
SWL will be good for you.

> My life does not center around amateur radio nor will it.

If I had to guess, I'd guess that your life centers around this
newsgroup.

> Amateur radio can be a fun hobby, but it is still a hobby,
> not some quasi-military, "follow orders" lodge hall "service."

It matters not what amateur radio is or is not. You aren't a radio
amateur.

> [that "service" word is not a regulatory term]
>
> Others think differently, but then others should not attempt
> to shove their personal desires down everyone's throat by
> any means.

Len, I'd be the last guy to insist that you become a radio amateur.

> >I've encountered no one else with your attitude.
>
> Wrong. If you've read everything in here, there have been

Try reading what I wrote. *YOU* don't have the authority to assign
homework. Un-snip your words and read the *demand* which you made.

Naw.... Just because he sent the orignal "advisors" doesn't saddle him with the historical facts that followed. The war actually began in earnest following LBJ's Gulf of Tonkin resolution. I really don't believe that JFK would ever have allowed the situation to go anywhere near where LBJ deilberbately directed it.

That word, "anyone", was used in a question, Jim. Here it is again:
"Why would anyone who is 100% satisfied with VHF/UHF-only privileges
bother to upgrade?"

I concede that I asked a question using the word "anyone". I did NOT
make any statement using the word "anyone" so there is nothing to
concede. Maybe it would help if you tried some Exlax for that problem
of yours.

Additionally, why should I have to prove it. I offer my belief based
on similar continued interest for many other types of "old
technology" interests (old cars, archery, etc.) that survive
simply because there is a group of people that have an interest
and follow it...and, in so doing, they are their own spokepeople
that advocate by doing what they love which, in turn, brings in
newcomers.

Cheers,
Bill K2UNK

> >exam.
>
> Not me. I did it voluntarily.

It doesn't matter if you did it voluntarily or not. Your feelings about
it don't matter. Every licensed ham is required by circumstances
(forced)
to meet the FCC requirements. If you have a ham license, you were forced
(required by circumstances) to pass the exam(s). Sorry, but what
happened
falls under the definition of "forced" that I published straight from
the
dictionary. When you deny it, you are attempting to change the
contextual
definition without telling us that's what you are doing. That's
impolite,
violates the contextual rules of the English language, and you should be
ashamed of yourself.

Any governmental requirement that carries the force of law is forced
upon the citizens, by definition. How you feel about those requirements
doesn't matter.

>
>Why? Because she wants to know why her husband was killed?

No, because she wants to learn what Bin Laden "wants in return for
stopping the terrorism." In other words, she wants to appease this
terrorist in order to make him stop committing terrorist acts. Do you
remember anything from history about the effect of appeasement?

>>She's probably some Soccor Mom in a minivan who has no problem

>>citizens. A true Clinton supporter, to be sure.
>
>I guess that means she doesn't have freedom of speech anymore, huh? Guilty of
>wrongthink because she wants to know the reasons behind terrorism.

Jim:

She doesn't simply want to know the reasons in order to better understand;
she wants to know what to hand over to Bin Laden to induce him to
stop killing innocent people, such as her husband. What does she think
Bin Laden would accept? Perhaps President Bush's head on a platter?
I'm guessing, based on her question, wouldn't bother her one bit! It is
obvious that she thinks that appeasing this Anti-American terrorist is more
important than standing up for American values.

>>We are now at war against terrorism -- not just the terrorists
>>responsible for the acts of September 11 -- but the *whole* of
>>terrorism, everywhere.
>
>If so, don't the relatives of those who have fallen have the right to know
>what the battles are for?

That's not the information she's seeking. She wants to know what to give over to Osama Bin Laden in order to make him stop prosecuting his war of terror against the United States. She wants to appease him, not defeat him. In fairness to her, she is distraught over the loss of her husband, and is not likely to be thinking very clearly. However, fuzzy thinking is no help in this situation.

>>This includes *all* those who condone,
>>support, and enable terrorists, including this woman!
>
>Bull. She didn't say the terrorists were right. She didn't say they should
>get what they want. All she did was ask what they want. Is asking such
questions
>wrong?

Yep. They are wrong in the worst possible way. I am not one little bit interested in what Osama Bin Laden wants, because I *know* what he wants. He wants to see the destruction of America and our way of life. The only thing I want is to stop him -- but definitely not by appeasing him. I want HIS head on a platter. Silver optional.

You really need to take time out and read what the FCC said, Larry.
They said code testing has absolutely nothing to do with "dumbing
down" or anything else except code testing and code skill. Your
family probably doesn't know Morse code. Does that make them dumb?

IF they professed to be HF ham radio operators there certainly could be a case made for it.
As we all know, CW is basic radiocommunications. Anyone professing an interest in ham radio who is not interested in learning Morse code to a mimimum proficiency can be said to be dumbed down. How could it be otherwise? Nothing technology has brought has reduced the usefulness of radiotelegraphy. It took hams refusing to learn it to do that.

Richard,
Sigh it seems we have some very black-and-white views here; either
you're for nuking anyone who's ever known a terrorist, or you're into
appeasement. I'm probably coming off as more of a war hawk than I am,
for fear of giving the latter impression.

For the record, I think you're right on. This is a war that will most
wisely be conducted primarily through law enforcement,
coalition-building and covert action, as well as extensive security
measures at home.

>Fixing the clock of those involved is not an issue, the question is how you

>understanding, respect, and impartiality. Yes, it might even take some
>advertising: we have not gotten a lot of mileage out of our assists to the
>Islamic residents of Bosnia and Albanian parts of the Balkans.
>

Again, I agree. We can do this the stupid way, or we can take real steps to end terrorism both in the short- and long-term. To the above, I'll add this: two of the real enablers of radical religious terrorist groups are extreme poverty and lack of education. Stepping up efforts against these scourges worldwide would be one of the wisest investments we could make.

>The village idiot can fire a $2 million missile, and (as has been so nicely
>stated) blow up an empty $10 tent while hitting a camel in the butt.
>Clauswitz to the contrary, warfare is not diplomacy by other means.

That, of course, is not to say that it's never necessary. I believe we would be well within our rights to attack intransigent countries ("Islamic" or not) that are supporting the people who have made war on us, and with an eye towards our basic security, doing so may well be the least of all evils.

I don't think that should be the first step, however. Further, as has been repeatedly pointed out, many of the terrorists' actions don't jibe with mainstream Islamic thought. We should work as hard as possible to get the bulk of the Islamic world on board. Frankly, I think the most important thing to do will be to make it clear that we are reacting out of self-preservation, rather than simply throwing our weight around in an attempt to squash Islam generally.

My greatest fear right now is that we all are so frightened and horrified about what happened that "we" are willing to give up so many personal freedoms to facilitate the things that "must be done" to wipe out terrorism (which will never happen). We probably cannot reverse many "restrictions" that we might be so willing to have placed upon us right now. Remember that.

You're the one who changed the context, Cecil.

You first asked why anyone who was 100% satisfied with VHF/UHF-only operating privileges would bother to upgrade. Then, when confronted with valid reasons, you tried to change it to "100% satisfied with a Tech license", which is a different thing entirely.

You also tossed in a pile of your own preferences.

Or set up the conditions under which they could flourish.

Afghanistan was the Soviets' version of Vietnam. We supported those who opposed
the Soviets, and now we're surprised that they want us out, too.

The West bought Iraqi oil and watched Saddam build a huge army, then was
surprised when he used it.

> Now, just like
>Dr. Frankenstein, they have turned on us, and we must

The long-term solution is to change the conditions that cause such extremists
to flourish.

I have to agree with Dick on this.

Yes, Kennedy got the US involved in Vietnam, but it was LBJ who escalated the
US involvement in the conflict from a support operation to large-scale combat
operations.

LBJ was concerned about being perceived as "soft on communism" and
inexperienced in foreign policy matters and global issues. (He ran against
Goldwater in 1964, and nobody could say Goldwater was soft on communism!) He
also thought he had to compete with the memories of JFK and PT-109 plus
General Eisenhower. Vietnam was LBJ's war.

They figured that reducing the requirements for a license and reducing
their admin work was part of the "less government is better
government" mantra. They're focusing on fewer rules but more
enforcement.

Let's see if I have this straight, Dick. Your family doesn't know Morse code and they are not presently dumbed down. A member of your family gets a tech license. He is suddenly dumbed down while all the rest of your family continues not to be dumbed down? You PCTA guys are the only people I know who can turn the accomplishment of acquiring an amateur radio license into a failure and a negative. You are ham radio's worse nightmare.

Jim, do you agree with others that an ordinary citizen who is not dumbed
down becomes dumbed down the moment he/she obtains a ham license?

I posted the definition of "forced" that I was using, Jim. You didn't post any opposing definition. So you are saying that you weren't required by circumstances to meet the FCC requirements in order to obtain your ham license. Isn't cheating the only way to obtain a ham license without being required by circumstances to meet the FCC requirements?

Governmental requirements that carry the force of law involve force, by definition. Drivers are forced to obtain a driver's license before being allowed to drive on a public road. That's a common use of the word "forced".

> >See
> >
> >http://www.ah0a.org

LHA convniently snipped the next two sentences of the original post,
where I noted that the AH0A numbers for Technician are the sum of
Techs, Tech Pluses, and "Techs with HF". Reason for snipping unknown.
>
> Joe Speroni is a PCTA.
>
> The Speroni statistics pages on US amateur radio conviently

> against that is that the Novice class was once considered

> the same "entry to amateur radio" but the Novice class
> numbers have been dropping for years...as far back as the
> AH0A statistics site tabulations go in the past. Novice
> class licensees had to pass a code test.

Translation: LHA has no clue as to what the numbers mean, nor the trends that have been obvious for years.

The Novice used to be the way most new hams got started. But when the "old" Tech got the same HF privileges as the Novice, (mid 1970s), many new hams began going straight for the Tech, bypassing the Novice. After all, it was just one more written test than the Novice, but it carried a lot more privileges.

When the VEC system took over license testing, this route became more common among beginners. When the old General test was split into two elements in 1987, the same thing happened. When the code test was dropped from the Tech in 1991, the route became even more common.

The logic is simple:

Getting a Novice meant passing the 5 wpm code and a simple written - two completely different tests. Result is a license with very limited privileges. But getting a Tech after Feb 14 1991 meant passing two writtens that were related (now it's just one) and the result is a license with lots of privileges. And the Novice HF privileges could be gained at any time by simply passing the 5 wpm code. End result: The Novice was bypassed by most new hams.

The number of Techs in the AH0A data grew steadily until March 2001, then started to fall. The number of Extras continues to rise steadily.

Then we are both right.

Someone who is 100% satisfied with VHF/UHF-only operating privileges
has several reasons to upgrade, as Jim and I have shown.

Someone who is 100% satisfied with a Tech license has little or no
reason to upgrade. The only reason I can think of is that such a
person may want to be ready in case they should change their mind
about the Tech license.

> of the license grant nor can such "activity" be any kind
> of factor in being part of a consensus condition.

Translation: LHA wants to argue with anyone, even those who are making
his point for him.
>
Here, LHA, I'll explain it so even YOU can understand it!* ;-)

K3LT claimed that the FCC should have looked to the ARRL for
consensus. But "consensus" means "general agreement", in the sense
that all interested/affected parties can live with the proposed idea.
Since ARRL does not have all interested parties as members, looking
only to ARRL for consensus doesn't make sense. And the ARRL is not
some monolithic block whose members all agree on the issues.

The fact is that the FCC gave up its earlier "waiting for consensus,
or something like it**" policy, and decided it was time to
restructure.
>
> >Nope. No way. Just look at the history.
> >
> >FCC has been pushing the nocode agenda since 1975.
>
> That's not visible on the public record or as some kind
> of "agenda" in ARRL publications.

Incorrect. Tell us, LHA, when did FCC try to have no-code-test ham
licenses before 1991?

> The ARRL's position
> on 98-143 (by public record) indicated they were still
> very much in favor of code testing.

What is the significance of that?

Fact is, ARRL BOD proposed reduced code testing. FCC simply went a
step further.
>
> >ARRL BOD opposition
> >did not stop medical waivers in 1990. ARRL's idea for a nocode VHF/UHF
> >license was ignored and the FCC just dropped the code test for Techs
> >in 1991.
>
> The FCC did not "just drop it."

Yes, they did.

ARRL BOD proposed a new class of nocodetest VHF/UHF license with a new
simple written test and very limited privileges. No 2 meters, for
example. The idea was that the new folks would populate 220-225 MHz,
which the FCC was proposing to partially reallocate. FCC saw through
that idea and simply dropped the code test and the HF privileges from
the existing Technician class. No new written test, no new name for
the license, easy and simple.

> FCC 90-53 clearly states their
> decision on making a new, sixth license class (without a code
> test) and why they did it, including quotes from commentors on
> both sides of the code issue. That was in 1990, 11 years ago.

The "Technician Plus" designation came about because hams with "old"
Tech tickets were concerned that their license documents did not
indicate that they had HF privileges.
>
> >FCC just doesn't want the hassle of code tests.
>
> The FCC had already privatized US amateur radio license
> testing by the 1991 no-code-test Technician class, leaving
> the VECs and VEs to administer code tests to the

> remaining five amateur radio license class tests.

Translation: Typical LHA statement of the obvious.
>
> It might come as a shock to the PCTAs, but the FCC does,
> by all public accounts, really accept citizen input.

Translation: Attempted insult.

The FCC accepts all input, even from noncitizens. They also ignore it when it suits them.

According to an NCI-sponsored count of the comments, a majority of those who commented to FCC on code tests in connection with restructuring not only favored code tests but favored at leat two code test speeds, 5 wpm being the lower speed. "5 wpm only" was a minority (46%, as I recall) opinion, yet FCC went that way in the restructuring.

> If code
> testing was such a "hassle" to the FCC, please explain how
> it can be a "hassle" when they would NOT normally be a
> part of the actual test process?

Simple.

FCC has to handle the records of testing, and the regulations. More important, the existence of medical waivers for >5 wpm tests meant that the FCC had to deal with the waiver paperwork. End result was a pile of admin work that the FCC didn't want and didn't see any point in continuing. Going to "5 wpm only" meant an end to waivers, and simplified code test record keeping: Passed or not passed.
>
> >In fact, I think the FCC wants to get rid of code tests for ham

As are all of my statements. Glad to see you agree with that one, at
least.

> It does, however, go against the opinion quoted above
> that the FCC is trying to "recruit freebanders or 'cb hams'".

How does it go against that? And by the way, the opinion says:

"I think the FCC wants to get rid of code tests for ham licenses so
that at least some folks who are now "freebanding" or using cb as a
hobby will become hams."

No mention of "recruiting" anyone, or "cb hams".

Does LHA think that trying to get "freebanders" and hobby users of cb
to become licensed hams will result in a less-orderly ARS?

><k8mn@earthlink.net> writes:

>I might have thought that you'd have attempted an amateur radio license
>exam a dozen years ago then.

A discussion of the issues concerning federal regulations
does not require any form of licensing in a service covered
by those regulations. That is what the FCC says when it
makes public statements that it accepts input from all
citizens. We citizens of the USA are supposed to enjoy
freedom of speech...which we do but apparently not
about amateur radio which is ostensibly "ruled" by the
long-timers in the ARS.

Discussion on the issue of morse code testing for an
amateur radio license seems to be extremely one-sided.
NCTAs have presented arguments against the regulation
and responded to the well-worn phrases quoted by the
PCTAs. Unfortunately, the PCTAs have responded
primarily with personal insults and NOT countered any
of the NCTA arguments on the issue.

>The absence of warmth and civility
>directed your way is an indication of how your attitude shines through
>each unpleasant posting you make. If you act in your life as you post
>here, it is unlikely that you are met with warmth or civility anywhere
>at any time.

Tsk, tsk. Snap judgement made in anger.

REAL debate is about issues, not personalities. REAL
debate is tough on those who want to intimidate by their
presence and tough talk and insults directed towards other
debaters.

>Right, Anderson--I can't fathom myself marching clear up to the doorstep
>(but not passing through the door) and as an almost neophyte, telling
>those already involved in an endeavor just how it should be done.

The FCC grants amateur radio licenses, not the "ARS."
The FCC accepts input on any radio service from any

citizen...they must.
The "doorstep" Heil mentions is NOT the "amateur
community" but rather the FCC.

"Telling those involved how it should be done" is spin to
disguise an ego-bruised psyche. Elimination of the morse
code test or the reduction in maximum test rate IN NO
WAY affected the rights and privileges of already-
licensed amateur extras. With some individuals it seems
to have shaken their self-pride and perceived self-worth as
radio amateurs...but that is an individual, subjective
opinion that has nothing to do with regulations. They
must come to grips with acceptance of change and the
realization that "they" no longer have the fanciful notion of
"control" over all of the "amateur community."

>I think you've been sprinkling whiffle dust on your pancakes.

>Morse is still in widespread use in amateur radio. Most of us don't
>limit our operating to morse only though.

Does the FCC regulate amateur radio on what is in "widespread
use in amateur radio?" I see no indication that is so. The FCC
has allocated a dozen amateur bands above the 70 cm band
but some (mostly PCTAs) in here insist they are "unused" or
"little used." Why allocate bands that are not used?

The FCC has allocated two CW-only subbands but both of
those are above 30 MHz. "Widely used" CW must share
sub-band space with data. An ARRL poll has indicated that
below-30-MHz amateur use has CW as second place.

The morse code test has been required for a US amateur radio
license since the first US regulatory agency was formed
before the first world war. Back then it made sense. 89 years
later it does not. The FCC said in 1990 and 1999 that the
morse code test has no value to them for regulation...but they
must keep it in order to honor an ITU-R agreement.

Since the FCC doesn't care about maintaining a code test,
but they must honor it due to the agreement, that leaves
only one group promoting the code test, the PCTAs. Since
those persons have passed a code test...and are unlikely
to have to pass another...they insist on keeping it with the
following, unspoken reason: If they had to take it, all others
have to take it.

That's not any "reason" except something within "the ARS
community" (meaning those who have already taken it, no
inidicator of the feelings of the rest of the US ARS licensees.

Heil's use of the word "us" seems to have two meanings.
One use of "us" refers to all the PCTAs of his opinion, not

the entirety of the US ARS "community." That "community"
is quite split on the "necessity" of the code test, witness
all those who have spoken out against it in here and on
Comments on 98-143.

The second "us" is used to designate non-ARS-licensees
as "not belonging." That indicates that the "territorial
imperative" or "turf" applies and that non-ARS-licensees
must somehow be "judged" by the ARS licensees as to
their "worthiness." [see Heil's claim that all (no exception)
newcomers are "neophytes" and used in a demeaning
manner]

>It IS clear but this isn't microwave oven ham radio. There is no
>"instant" anything.

No one is insisting on any "instant" anything. That word
use is restricted to PCTA phraseology in here.

>There is a laughable 5 wpm test in place for any HF
>license.

That is an indicator that morse code skill is considered to
be the highest attribute of any amateur licensee. That is
the view of a minority of the US ARS "community"
according to a poll by the ARRL and also public Comments
on 98-143.

>> I am advocating the elimination of the morse code test for
>> any amateur radio license. It's not a personal issue. It is an
>> issue which affects the future of those not yet in amateur
>> radio.
>
>What's it to you?

It is not a personal issue, but rather a view that true
restructuring has not yet been achieved. The issue seems
quite personal to PCTAs. According to them the code test
is a showing of "dedication" and "discipline" yet the FCC
regulations do not mention them. Their use of "dedication"
and "discipline" seems more like an "allegiance 'owed' the
ARS." PCTAs have no such authority but claim it in
projecting their personal desires well beyond the entirety of
the "ARS community." Such a claim is fictious, an
artificiality.

>It's not an imaginary personal case, Anderson. It's a real personal
>case. Since your Extra ticket out of the box now seems less important
>to you it makes sense to re-evaluate your goals. Settling on being an
>SWL will be good for you.

Thank you for your imperial decision...but Heil is not emperor
nor does he have any authority to "grant" anything. :-)

Personal desires seem to drive all PCTAs in the US ARS that
comment in here. They and some NCTAs project their own
experiences as examples. Such examples seem consistent
in beginning as a teenager as if "that is the way it is done."

The FCC grants US amateur radio licenses. They must
consider the "personal wishes" of ALL citizens. Those
"personal wishes" are not the same as Heil's.

>If I had to guess, I'd guess that your life centers around this
>newsgroup.

That would be a very wrong guess.

>Len, I'd be the last guy to insist that you become a radio amateur.

That is quite evident. Please do not state the obvious. :-)

>I've encountered *no one* with *your* attitude. There are some
>forthright individuals who have been civil in their attitude. Then
>there is you.

Now, now, you're personalizing everything again. :-)

There have been forthright individuals in here who responded
to the holier-than-thou attitude of the PCTAs other than
myself. To say "you've never seen them" indicates your
reader program is faulty (doubtful) or that you are simply
personalizing a debate under perceived insult to yourself.

>Likewise, I suffered a dilemma. You win by default since Big Mouth Carl
>is gone.

If you mean Carl Stevenson, he is not "gone" but is not in
this newsgroup. Carl has one attribute and that is standing
for what he believed in despite the personal attacks
levelled at him by the PCTAs.

>Try reading what I wrote. *YOU* don't have the authority to assign
>homework.

True, I am not a school teacher. :-)

>> >> >> >It is possible to be both patriotic and an insensitive boob, Len. I

In article <9f4bfe89.0109190928.1aec4903@posting.google.com>, n2ey@aol.com (N2EY) writes:

>All that was required of the FCC was a biennial review. They were only >mandated to restructure if they saw a need for it.

The FCC apparently saw a need of it...especially after receiving over 2600 Comments on 98-143.

>Sorry, LHA, it's exactly what happened. FCC decided to restructure >even though there was no consensus in the amateur community about it.

"No consensus?!?" The whole of the 2600+ Comments indicated a sharp difference of opinion. The difference was so obvious that no one could claim that a "consensus" was possible.

>Nope. Congress ordered biennial reviews. FCC decided it was time to >restructure.

What is Miccolis' point here? Every radio service which has been renewed has been restructured.

>> The FCC never closed its doors or offices to ex parte
>> presentations either from the ARRL or NCI.
>
>Nobody ever said they did!

Miccolis (in an unquoted-by-him statement) implied that the FCC did not accept any input but rather made its decision solely internally.

>So? You didn't even bother to comment, LHA - just "reply comments", >which are supposed to be only about other comments.

Word play implying insignificance. 14 pages of single-spaced text is not exactly "insignificant." It is on public view at the FCC website. Note: A "Reply to Comments" is ALSO a "Comment."

>> >For decades, ARRL membership has hovered at about 1 in 3 US hams,
>> >based on the FCC license numbers.
>>
>> For the past decade the ARRL membership is about 1 in 4,
>> not 1 in 3, based on the ARRL's own membership information

>Since ARRL does not have all interested parties as members, looking
>only to ARRL for consensus doesn't make sense. And the ARRL is not
>some monolithic block whose members all agree on the issues.

The "more educated source" has not read enough of the
98-143 commentary. The division on code test retention
or elimination was obviously so deep that it was not possible
to see any possibility of consensus.

>The fact is that the FCC gave up its earlier "waiting for consensus,
>or something like it**" policy, and decided it was time to
>restructure.

The FCC simply did not get any consensus, could not see
that it was possible. Exactly what the FCC decided is on
public view as FCC 99-412.

>> The ARRL's position
>> on 98-143 (by public record) indicated they were still
>> very much in favor of code testing.
>
>What is the significance of that?
>
>Fact is, ARRL BOD proposed reduced code testing. FCC simply went a
>step further.

The ARRL's Comments on 98-143 were to maintain code
testing. Miccolis implied that the ARRL "was against
code testing," something the ARRL did not state prior to

99-412.

>> >ARRL BOD opposition
>> >did not stop medical waivers in 1990. ARRL's idea for a nocode VHF/UHF
>> >license was ignored and the FCC just dropped the code test for Techs
>> >in 1991.
>>
>> The FCC did not "just drop it."
>
>Yes, they did.

NO. FCC 90-53 *renamed* the previous Technician class to
"Technician Plus," kept the code test for Technician Plus, and
created the new Technician class license which did not have
a code test. Even though no new Technician Plus licenses
are granted, they still exist and are separate from Technician.

Miccolis should not make such mistatements and also
claim to be "more educated." :-)

>
>ARRL BOD proposed a new class of nocodetest VHF/UHF license
<snip>

Repeating the public statements by rewriting "what they meant"
and also leaving out significant parts (such as I stated above)
is not accurate. "More educated persons" should not make
such mistakes.

>The "Technician Plus" designation came about because hams with "old"
>Tech tickets were concerned that their license documents did not
>indicate that they had HF privileges.

Not quite. The real wording is in 90-53.

>> It might come as a shock to the PCTAs, but the FCC does,
>> by all public accounts, really accept citizen input.
>
>Translation: Attempted insult.

Does the FCC accept input from all citizens? Yes.
That's not an "insult" but a statement of fact.

>The FCC accepts all input, even from noncitizens. They also ignore it
>when it suits them.

So, Miccolis is able to look into FCC offices to see things
that are "accepted" and "ignored?" I don't think so.

The FCC makes ALL written input from the citizenry public,
much of it accessible through their website. When they
make decisions those decisions are made public along with
the reasoning behind decisions quoting input from identified
sources. That is NOT "ignoring what they choose to ignore."

>According to an NCI-sponsored count of the comments, a majority of
>those who commented to FCC on code tests in connection with
>restructuring not only favored code tests but favored at leat two code
>test speeds, 5 wpm being the lower speed. "5 wpm only" was a minority
>(46%, as I recall) opinion, yet FCC went that way in the
>restructuring.

You will have to quote the exact wording of that, won't you? :-)

Did the Comments on 98-143 reflect a "consensus?" No.

Did the Comments on 98-143 reflect even a possibility of
"consensus?" No.

>> Is the FCC engaged, or shoult it be engaged in some activity
>> to recruit hams? This is not in their charter, is it?
>
>Translation: LHA doesn't want ham radio to grow unless its growth is
>in exact accord with his vision for the service.

WRONG translation. The FCC is not, nor has it ever been in
any activity to recruit hams. The FCC only regulates US
civil radio and interstate landline communications services.

>> That's a noble enough statement and, in my opinion, a good
>> one.
>
>As are all of my statements.

Heh, by whose judgements? :-)

4311. Re: If S25.5 Went Away Tomorrow...?!?!

>> Reminder: The amateur radio written test is in no way any
>> sort of academic achievement test.
>
>Translation: Some sort of insult.

No insult. All radio operator tests required by FCC regulations, commercial or amateur, are for the FCC's purpose in determining whether an applicant should be granted a license.

The FCC is not chartered to be an academic organization.

FCC tests cannot be "academic achievement tests."

>> What has been your experience in these bands?
>
>Infinitely more than yours operating on the ham bands below 70 cm.

Zero divided by zero is still zero. :-)

Sigh...I thought "more educated persons" could do simple arithmetic accurately.

>> Advanced and Novice licenses are no longer granted, yet
>> they are listed separately. It should come as no surprise
>> that those classes are also decreasing in number. The
>> Advanced and Novice license class test required a morse
>> code test.
>
>Translation: LHA has no clue as to what the numbers mean.

Translation: Miccolis attempts an insult. :-)

>> A look at the NEW, never before issued, license class
>> tabulations show that the overwhelming majority of NEW
>> licensees are the no-code-test Technician class.
>
>Translation: LHA states the obvous, then ignores the fact that
>upgrades and expirations from the combined classes exceed new
>licenses.

Translation: Miccolis tries to ignore the fact that the NEW licensees going to Technician class are much larger than the combined numbers of new extra and general classes.
He also puts spin on all those upgrading from "lower" classes to extra to indicate that extra numbers are rising...by not

mentioning the decrease in the class numbers of others.

>> PCTAs will rationalize that the Technician class is really
>> "an entry class to amateur radio" and avoid discussing
>> the absence of a code test for that class.
>
>Translation: LHA claims to have a crystal ball.

Not prescience, just demonstrated repetition by PCTAs on
stock phrases used over and over and over again. :-)

>Translation: LHA has no clue as to what the numbers mean, nor the
>trends that have been obvious for years.

Proper Translation: Miccolis wants everyone to believe that ONLY
his spin on license class totals is "proper" and to ignore the
"lesser" classes such as the no-code-test Technician. Anyone
who does not agree to Miccolis' summation is summarily
"dismissed" as "in error." :-)

An example of spin -

>The number of Techs in the AH0A data grew steadily until March 2001,
>then started to fall. The number of Extras continues to rise steadily.

Speroni changed his tabulation scheme by combining
Technician-Plus numbers with Technician numbers. Those
are still separate classes even though no new Technician-Plus
licenses are granted. The spin comes from trying to have
both Technician-Plus and Technician categorized as just
"Techs" as if they were only one class.

Past threads have stressed the "fact" (supposition really)
that the (no-code-test) Technicians' class totals would be
dropping by large numbers as soon as renewal time came
about. That did not happen. The next claims by the same
group now wish to lump two separate classes together
under the title of "Tech" since they seem to categorize
such "Techs" as inferior or the "lowest caste."

The number of extras is rising due primarily from "upgrades"
from other classes (any of the other classes may upgrade,
jumping "higher" classes). Miccolis spins by omission of
differentiating between NEW extras and upgrades to that
class...and for the latter, omits the decrease in those
classes.

All of that is pure spin to attempt making amateur extras
look good (Miccolis is an extra) and technician class
look undesireable. That seems to tie in with boosting the
code test as the highest attribute of amateurism. :-)

Sin by omission is still sinning. :-)

\

Cecil can't understand that it's not the ham who is dumbed down but
rather the license requuirement.

I guess it all balances out, Cecil. You are ham radio's most notable
genius cum idiot.

You've discussed 'em. You've re-discussed 'em. You've made your input
to the FCC. The FCC may or may not have disregarded your input. You
indicated that you "might have had" some interest in obtaining a license
beginning a dozen or so years back. A dozen years of sitting on the
fence is a looooooong time.

> Discussion on the issue of morse code testing for an

Funny. I don't see it that way at all. For every argument presented by
those who would like to see code testing abolished, I've seen counter
arguments presented by those who desire code testing retention. I think
you manufactured your facts.

> >The absence of warmth and civility

Everyone here knows who grants amateur licenses. When you first obtain
an amateur license, having never held one previously, you are a
beginner. God, how it must gall you.

> has allocated a dozen amateur bands above the 70 cm band
> but some (mostly PCTAs) in here insist they are "unused" or
> "little used." Why allocate bands that are not used?

Yeah, Len. I think they do. The fact that you don't acknowledge that
it happens does not negate that it does. Those "PCTAs" who insist that
most bands above 70cm are under used would be quite correct. Even 70cm
itself is quite under used.

> The FCC has allocated two CW-only subbands but both of
> those are above 30 MHz. "Widely used" CW must share
> sub-band space with data. An ARRL poll has indicated that

> newcomers are "neophytes" and used in a demeaning
> manner]

But, Len--all newcomers are neophytes in any field. Why do you seem to
have a problem with that? If you ever enter amateur radio, you'll be a
neophyte, a beginner. It'll soon pass and the damage to your enormous
ego will be slight.

> >It IS clear but this isn't microwave oven ham radio. There is no
> >"instant" anything.
>
> No one is insisting on any "instant" anything. That word

No, it was an indicator that 5 wpm can be done by a guy sorting out dot
and dash sounds in his bean. "Let's see...dit dit dit
dit.....ummmm...that's an 'H'."

> >> I am advocating the elimination of the morse code test for

I didn't grant anything. You've mandated it yourself through inaction
on your part.

> Personal desires seem to drive all PCTAs in the US ARS that
> comment in here. They and some NCTAs project their own
> experiences as examples. Such examples seem consistent
> in beginning as a teenager as if "that is the way it is done."

There are numerous older neophytes. You can be a neophyte too if you
get moving.

> >If I had to guess, I'd guess that your life centers around this
> >newsgroup.

> That would be a very wrong guess.

Do you haunt other newsgroups as well?

> >Len, I'd be the last guy to insist that you become a radio amateur.
>
> That is quite evident. Please do not state the obvious. :-)

Actually, Len, it wouldn't bother me in the least if you got off your
duff and went after a license. I just wouldn't want to find myself
trying to engage you in pleasant banter. The word "pleasant" never
comes to mind when I think about you.

> >I've encountered *no one* with *your* attitude. There are some

> personalizing a debate under perceived insult to yourself.

There have been others who have not supported code testing. There have
been a few who piss folks off. No spectacular talent for grating on
others has been demonstrated except by you and Big Mouth Carl, the guy
who actually e-mailed me a portion of his job evaluation in an effort to
prove to me just how sharp he is.

> >Likewise, I suffered a dilemma. You win by default since Big Mouth Carl

That's the Big Mouth Carl I mean! Gone from this newsgroup and not encountered on the ham bands is good enough for me. The personal attacks levelled at Carl were certainly less than he had coming.

> >Try reading what I wrote. *YOU* don't have the authority to assign

You can rely on the fact that I was calm when writing them and that I gave them some thought before posting them. I'm afraid you've got me on "impersonal" since they were certainly directed toward LHA.

The FCC isn't running a magazine paying authors at a nickel a word.
Quantitiy doesn't count. Being on public view doesn't count. Posting
your stuff indicates "R" for "received". It does not indicate approval
or action on what you've submitted.

> The FCC makes ALL written input from the citizenry public,

4319. Re: Ham radio irrelevant during terrorist crisis

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-20 04:27:19 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <A7eq7.6260$2H2.440648@e3500-atl1.usenetserver.com>
Source record: 20563

Frankly, I just don't understand why this is such a passionate issue on either
side, but especially for you Lenny.Yes, I am one of those "old" farts that had
to learn CW, but it had/has nothing to do with what others must do to attain
the same privileges. I did it simply because it was one of the requirements in
effect at the time (late 80s). I dreaded it, I thought I might not be able to do it,
and I put it off. When my desire to operate on HF became strong enough, I
said, "OK (sigh), I"m gonna do this 13 WPM thing and I will forget about it."
But a funny thing happened on the way to the "opera"--I actually began to
ENJOY it. I discovered that it wasn't so bad after all. Once over the hill, I
discovered that the grass was, indeed, greener, and I had mastered a skill--
maybe not an essential skill, but a skill nonetheless. I have always excelled in
languages, and CW became a satisfying extension of that ability. It was/is fun
to sit by and copy words/QSOs and understand what is being said.

You might say, Lenny, we ALL have been on BOTH sides of CW--once not
even able to copy a single letter, then able to copy 10, 12, 15, 20, or more
WPM. When I was on the "other" side of 5 WPM, I dreaded trying to learn it.
But there was a "reward", a carrot, if you will, on the other side. I did
it in order to obtain something else more important to me.

For the moment, CW is here. It is a fact of life. The Feds cannot just wave a
wand and make it go away lest we breach a long-standing treaty. I concede
that, at some point in the future, it will go away. Until then, we just have to be
patient and see what happens.

As to the relevance, or lack thereof, of Amateur Radio during this past, or any
other National emergency, I must take issue with you on this. Amateur Radio
has always been involved in emergency communications and support when the
jig is up. I don't have to defend that. It is a fact, backed up by documentation
and the accolades of ES Directors all over the country. It is why most states,
counties, and cities include RACES, ARES and other amateur groups in their
EOCs. IF we were "irrevelant", then those ESDs would completely ignore our

offers of help, but instead of having to offer help, they quickly call upon us in the first minutes, or hours of an event. Funny, I don't see them calling on CBers with the rare exception of a few REACT groups--there isn't any such group at
our local EOC, but ARES has a permanent place at the desk of radios in there. That's because those people train to pass traffic, train to provide backup comms. Funny, but my area ham repeaters were full of traffic in the aftermath of the terrorist attack.....organizing collection of blood supplies, food, and providing comms for the Red Cross. HF was busy as well, providing comm-
unications for EOCs from Florida to New York. I was THERE, Lenny, not only as a ham, but as an authorized user of a Federal System called SHARES, operating on several FEMA HF frequencies as well.

Finally, I just don't understand your hostility towards Amateur Radio and the
CW requirement as well. We can't HELP the status of CW right now. Go ahead and express your opinion on its abolishment--you aren't alone. Person-
ally, I kind of LIKE the CW requirement, and my reasons are my own and not meant to provide a basis for flaming others for their opposite opinions. If it
goes away, fine. If not, fine. As an outsider, attacking ham radio, I just don't
see how it's any of your beeswax considering that you stated you have no in-
tention of joining the fraternity anyhow.

Jerry

Ah, that explains why no one rides horses or bicycles, sails sailboats,
hand-carves wood, hand-dyes or hand-weaves textiles, or prints
letter-press documents anymore.

Rich

Freedom is about making your own choices and
taking personal responsibility for those choices.
We cannot legitimately blame others for our own actions.

"Loonies" are not censored in our free land because:

People are not forced to listen to what some loony says.

Therefore, people are not harmed by what some loony says.

Therefore, if people listen, they do so willingly,
are actively seeking something about which to be offended,
and have only themselves to blame.

This is common sense and
taking responsibility for one's own choices.

Too bad the rest of the world doesn't get it.

LET FREEDOM RING

>play pretties." [that's a rather stupid, denigrating description
>of any ham's elaborate amateur radio station]

YOU are the one who made the comments vis-a-vis buying an FT-1000, Lennie.

>Jim Hall, KD6JG, has a Yaesu FT-1000 in the office room of
>his house in Cedar Ridge, CA. The number came to mind is
>all. [I do not commit ham equipment advertising data to
>memory nor do I have envy of what others have]

Uh huh...Sure...we REALLY believe you, Your Geezerness.

>Think ever more deeply. I've said at least twice that I have no
>interest in working HF DX just for the sake of working DX or
>making contacts just for the sake of making contacts..

THEN....If that were TRUE (which I am sure it is NOT), then YOU could have
been a licensed Amateur and had capabilities at your fingertips that allowed
you as an individual to have far greater than any employer ever gave you as an
employee.

>...nor
>have I any desire for "loading up the shack with lots of expensive
>play pretties." [that's a rather stupid, denigrating description
>of any ham's elaborate amateur radio station]

No it's not. YOU are stupid and denigrating. Almost every Ham I know
want's MORE "play pretties".

WE can use them...YOU can only admire them.

>I am thinking about trading it in for a newer model with
>RF output levelling, but that is another subject.

What about the subject of YOU gettign a license and getting some play
pretties of your own, Lennie?

>Robeson is sadly mistaken if he thinks I am "lusting" (as
>someone put it) for an HF privilege amateur license.

YOU are the one who brought it up, Lennie.

Of course, you only mentioned the FT-1000 since your friend has mentioned it...Just like EMS wannabe's who recite impressive sounding medical terms but have no idea what they mean, you recite what your REAL Ham buddy says.

That's because you have NO practical knowledge or experience in Amateur Radio.

Again, you act the fool because you ARE the fool. Lennie.

Lost in a world you cannot comprehend nor understand.

Need a map?

Steve

>
>Who says? Many think it's a quite handsome radio. Take care and 73.

I agree 100%, Mike. I was being facitious for Lennie's sake.

The comment was aimed at Lennie the Licenseless. He made a comment the other day about how I must be lusting over a particular radio that he is in financial circumstances that permit him to just buy one off the shelf if he so desires.

The probelm, of course, is that he has NO license and it would be nothing more than an overly-equipped SWL receiver for him.

He'd be all dressed up with no where to go.

I love my 757GXII. It's a great rig.

I suppose when you find yourself in circumstances where no modern transportion is available, you will just sit instead of saddling up or mounting the bicycle. That seems to fit your mentality.

> hand-carves wood, hand-dyes or hand-weaves textiles, or prints
> letter-press documents anymore.

None of this has any relationship to communications or other immediate needs. When communications is needed, you use what you can, with what you have available. No doubt you and the rest of the No-code world will not have CW available. That is your personal flaw and shortcoming. And you can't even imagine it.

LHA demonstrates the technique of multiple mistakes in a single sentence.

1. My experience on the bands above 70 cm. is not zero.
2. Division by zero is undefined.
3. The limit of the mathematical expression where both quantities approach zero is not necessarily zero.

>
>Sigh...I thought "more educated persons" could do simple
>arithmetic accurately.

I can. You obviously can't, because you think you can divide by zero.

>>
>>Why? Because she wants to know why her husband was killed?
>
>No, because she wants to learn what Bin Laden "wants in return for
>stopping the terrorism." In other words, she wants to appease this
>terrorist in order to make him stop committing terrorist acts.

No, that's not correct, Larry. You are projecting your thought processes on someone you don't know.

Simply asking the question "what do they want?" is NOT an indication that the asker wants to give those things. The situation is like the person in a store who asks the price of an item - it doesn't mean the person wants to pay that price. All it means is that the person wants information.

> Do you
>remember anything from history about the effect of appeasement?

Sure. Do you remember anything from history about the success rate of superpowers in guerilla wars against dedicated idealistic fanatics?
>
>>>She's probably some Soccor Mom in a minivan who has no problem

>Jim:
>
>She doesn't simply want to know the reasons in order to better understand;
>she wants to know what to hand over to Bin Laden to induce him to
>stop killing innocent people, such as her husband.

Is that an unreasonable question?

> What does she think Bin Laden would accept?

She doesn't know - that's why she asked the question. She does not presume to know others' motivations.

> Perhaps President Bush's head on a platter?

Maybe. You don't really know, do you?

>I'm guessing, based on her question, wouldn't bother her one bit!

You're projecting your biases and prejudices on someone you don't even know.

> It is
>obvious that she thinks that appeasing this Anti-American terrorist is more
>important than standing up for American values.

Not at all. You ASSUME that she would give the terrorists anything they want. Know what happens when you assume?

And which "American values" is she not standing up for? Shall we start with freedom of speech?
>
>>>We are now at war against terrorism -- not just the terrorists
>>>responsible for the acts of September 11 -- but the *whole* of

Kim,

Good point. Restrictions imposed as a temporary measure gradually become accepted as normal. Lots of examples, like the income tax.

I thought you said, "it's not the ham who is dumbed down". You
are contradicting yourself. Please make up your mind. Is an
ordinary citizen dumbed down by the achievement of obtaining
a ham license? It's a simply yes/no question.

You completely missed the point, Dick. I have a GMC pickup and a Harley available yet I ride my bicycle ten miles almost every morning. It is not only fun but makes me strong in case I need to be strong. CW is the same. It is not only fun but can be useful when it is needed. No need for an affirmative action program requiring me to know how to ride a bicycle. Same for Morse code.

> No doubt you and the rest of the No-code world will
> not have CW available. That is your personal flaw and shortcoming.

99.8% of the population of the US has that same "personal flaw and shortcoming" including most of your relatives. It is a personal choice, Dick, not a flaw. You and I have the right to choose to know and use CW. 99.8% of the population has exercised their right to choose not to know and use CW. And that's exactly the way it should be in a hobby in a free society. You seem to think ARS stands for "Armed Radio Service".

4335. A Letter From Ted Nugent

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-20 18:00:40 UTC
From: Jim Kelley <jwkelley@uci.edu>
Message-ID: <3BAA2EC8.77440AA2@uci.edu>
Source record: 20579

Written by Ted Nugent, the rock singer and
hunter/naturalist, upon hearing that California
Senators B. Boxer and D. Feinstein denounced him
for being a "gun owner" and a "Rock Star". This
was his response after telling the senators about his
past contributions to children's charities and scholarship
foundations which have totaled more than $13.7 million
in the last 5 years!!

I'm a Bad American - this pretty much sums it up for
me. I like big trucks, big boats, big houses, and
naturally, pretty women. I believe the money I make
belongs to me and my family, not some midlevel
governmental functionary with a bad comb-over who
wants to give it away to crack addicts squirting out
babies. I don't care about appearing compassionate.
I think playing with toy guns doesn't make you a killer.
I believe ignoring your kids and giving them Prozac
might.

I think I'm doing better than the homeless. I don't think
being a minority makes you noble or victimized. I have
the right not to be tolerant of others because they are
different, weird or make me mad. This is my life to live,
and not necessarily up to others' expectations. I know
what SEX is and there are not varying degrees of it.

I don't celebrate Kwanzaa. But if you want to that's fine;
I just don't feel like everyone else should have to. I
believe that if you are selling me a Dairy Queen shake,
a pack of cigarettes, or hotel room you do it in English.
As of matter of fact, if you are an American citizen you
should speak English. My uncles and forefathers
shouldn't have had to die in vain so you can leave the
countries you were born in to come disrespect ours,
and make us bend to your will. Get over it.

I think the cops have every right to shoot your sorry butt
if you're running from them after they tell you to stop. If
you can't understand the word 'freeze' or 'stop' in
English, see the previous line. I don't use the excuse
"it's for the children" as a shield for unpopular opinions
or actions. know how to count votes and I feel much
safer letting a machine with no political affiliation do a
recount when needed. I know what the definition of

lying is, and it isn't based on the word "is"-ever.

I don't think just because you were not born in this country, you qualify for any special loan programs, gov't sponsored bank loans, etc., so you can open a hotel, 7-Eleven, trinket shop, or any thing else, while the indigenous peoples can't get past a high school education because they can't afford it.

I didn't take the initiative in inventing the Internet. I thought the Taco Bell dog was funny. I want them to bring back safe and sane fireworks. I believe no one ever died because of something Ozzy Osbourne, Ice-T or Marilyn Manson sang, but that doesn't mean I want to listen to that crap from someone else's car when I'm stopped at a red light. But I respect your right to.

I think that being a student doesn't give you any more enlightenment than working at Blockbuster or Jack In The Box. I don't want to eat or drink anything with the words light, lite or fat-free on the package.

Our soldiers did not go to some foreign country and risk their lives in vain and defend our Constitution so that decades later you can tell me it's a living document ever changing and is open to interpretation. The guys who wrote it were light years ahead of anyone today, and they meant what they said - now leave the document alone, or there's going to be trouble.

I don't hate the rich. I help the poor. I know wrestling is fake. I've never owned, or was a slave, and a large percentage of our forefathers weren't wealthy enough to own one either. Please stop blaming me because some prior white people were idiots - and remember, tons of white, Indian, Chinese, and other races have been enslaved too - it was wrong for every one of them.

I believe a self-righteous liberal Democrat with a cause is more dangerous than a Hell's Angel with an attitude. I want to know exactly which church is it where the "Reverend" Jessie Jackson preaches; and, what exactly is his job function. I own a gun, you can own a gun, and any red blooded American should be allowed to own a gun, but if you use it in a crime, then you will serve the time.

I think Bill Gates has every right to keep every penny he made and continue to make more. If it makes you mad, then invent the next operating system that's better and put your name on the building. Ask your

buddy that invented the Internet to help you.

I don't believe in hate crime legislation. Even suggesting it makes me mad. You're telling me that someone who is a minority,gay, disabled, another nationality, or otherwise different from the mainstream of this country has more value as a human being that I do as a white male. If someone kills anyone, I'd say that it's a hate crime. We don't need more laws! Let's enforce the ones we already have.

I think turkey bacon, turkey beef, turkey fake anything sucks. I believe that it doesn't take a village to raise a child-it takes a parent with the guts to stand up to the kid and spank his butt and say "NO!" when it's necessary to do so. I'll admit that the only movie that ever made me cry was Ole Yeller. I didn't realize Dr. Seuss was a genius until I had a kid.

I will not be frowned upon or be looked down upon or be made to keep silent because I have these beliefs and opinions. I thought this country allowed me that right. I will not conform or compromise just to keep from hurting somebody's feelings. I'm neither angry nor disenfranchised, no matter how desperately the mainstream media would like the world to believe otherwise. Yes, I guess by some people's definition, I may be a bad American. But that's tough.

Ted Nugent

Yep, I made that statement and I stand by it. Nothing to concede. N2EY agrees. If someone wants a 1x2 or 2x1 call then that is obviously prima facie evidence that they are not 100% satisfied.

So there is nothing to concede regarding my statement and it is not possible to concede anything regarding a question. You are beating a dead horse.

While this letter is certainly something Ted Nugent would agree with, it has also been attributed to George Carlin, Rush Limbaugh and Denis Leary. None of these actually wrote it. A message from the REAL original author is at http://www.freerepublic.com/forum/a3b21fbab4b27.htm . It is also debunked at http://www.snopes2.com/quotes/carlin.htm

Uh huh.

>Consider what would have
>happened to the hijacked planes if the pilot and/or co-pilot had been
>carrying concealed firearms

Until we know what happened on those planes, it's impossible to speculate.
Maybe the crew members would have shot the hijackers. Maybe the hijackers would
have knifed the crew members before they could get the guns out.

>- or even if Barbara Olsen had had a 9mm in
>her purse.
>
This last is nonsense.

If it were legal to bring firearms onto commericial aircraft, the hijackers
would have brought them on, too.

Did you know that it was OK to bring knives (small ones - 3 or 4 inch blade was
the limit) onto commercial aircraft?

It is legal for federal marshals to bring firearms onto commercial
aircraft without allowing such for the hijackers. The government
is recruiting for that position at this very moment. Neal Boortz
has suggested that anyone with a valid concealed carry permit be
allowed to bring concealed weapons onto commercial aircraft and
be issued special fragmenting ammo. Have you read, "More Guns,
Less Crime"?

Yes, I did, but it was unintentional. The question I meant
to ask was, "Why would anyone who is 100% satisfied with
a tech license want or need to upgrade?" That still leaves
your ridiculous demand that I concede a point which is
impossible to concede since the "point" you are talking
about was something contained in a question and therefore
was not a point at all.

DUUUUHHHHHH Jim, a 1x2 or 2x1 license is an additional privilege.
That was your first example.

If someone is 100% satisfied with a tech license, he/she will not
upgrade. If he/she upgrades, then he/she was not 100% satisfied with
a tech license. You are beating a dead horse.

I have been 100% satisfied with a BSEE degree and therefore
have never sought a higher degree. If I sought a higher degree
it would be because I was not 100% satisfied with a BSEE degree.
What is it about that concept that you find so hard to understand?

I'm convinced that appeasement and tolerence are the religion of
the simple-minded.

In this country millions of people are blindly adrift on the
sea of "live and let live". And we've allowed it to be a
comfortable place to be. But the fanatics aren't going to
allow that. Over the next months and years, people who worship
at the altar of appeasement are going to be forced into seeing
that appeasement of terrorists and fanatics is a myth. They
will force each of us to make a choice. This is a classic battle
of good versus evil. You will be forced to choose which side
you're on.

I've chosen my side.

The IOoDHW (International Order of Dismayed Hand Wringers) are being
heard louder each day, decrying the innocents who will suffer from
the pending punishment (ignoring the innocents already fallen on
our soil). I trust that Allah will sort out the innocents from the
perps.

With all kind wishes,

de Hans, K0HB

Absolutely. It has never worked before. Apparently it was not a lesson
well learned from WW2 for this "person".

>In this country millions of people are blindly adrift on the
>sea of "live and let live". And we've allowed it to be a
>comfortable place to be.

Again, Absolutely. And I could spank Jimmy Carter and his "feel good"
policies of the 70's which I believe helped to set this. Especially his
"Executive Order" which castrated America's intelligence services.

>The IOoDHW (International Order of Dismayed Hand Wringers) are being

Why not? :-)

The retention or elimination of the amateur radio license code test will NOT affect the privileges of those amateurs who have already been tested. It DOES affect all those who MIGHT want to enter into amateur radio through licensing. That latter number may be small, large, or possibly huge since it extends into an indefinite future.

>Yes, I am one of those "old" farts that had

The FCC did not carry on a code test for radio amateurs to boost fun, allow them to learn a secret language, or even uncover individual hidden talents. The FCC's task is to regulate US civil radio, all of it including amateur radio. A license grant exists because it is the FCC's decision that testing is a way to perform that regulation. Passing both written and morse code test elements is NOT an academic achievement...it is just passing a required regulation.

To be fair, having passed an amateur radio license exam IS a personal achievement but it needs to be kept in perspective, especially in regards to regulations. Individual skill in a particular aspect of amateur radio is not a valid claim to its continuance in regulations covering all, whether or not those others are licensed amateurs.

Some of those who have passed a code test seem to
overemphasize the fact...or subscribe to the mythology
that excellence in code skill is the defining mark of
amateur radio. The FCC doesn't think so, but then the
FCC only regulates US amateur radio (as well as a much
larger group of other radio services)... :-)

To put things on an "individual" basis, if one could take a
survey of how many have tried morse code and did NOT
like it, the number may be higher than realized. PCTAs
conveniently ignore such things while basking in their
self accomplishment.

>You might say, Lenny, we ALL have been on BOTH sides of CW--once not
>even able to copy a single letter, then able to copy 10, 12, 15, 20, or more
>WPM. When I was on the "other" side of 5 WPM, I dreaded trying to learn it.
>But there was a "reward", a carrot, if you will, on the other side. I did
>it in order to obtain something else more important to me.

You have to fairly ask WHY the code test remains as a
"carrot." Who demands that it should stay as a license
test regulation? The overwhelming answer as to who turns
out to be those who have passed such a test. Those
insist that it should be kept for the unvoiced "reason" that
they had to pass it therefore all others must also pass it.

>For the moment, CW is here. It is a fact of life. The Feds cannot just
>wave a

WRC-03 is a year and a half away. According to FCC public
record, IWG-6 (Informal Working Group 6) of the International
Bureau has NOT YET decided anything on ITU-R itme 1.7
that covers three things in proposed recommendation changes.

Item 1.7 has existed for over a year, IWG-6 has met four
times yet they cannot agree on a draft proposal concerning
it...it keeps being "tabled." One of those three topics in
1.7 is the 40m band amateur realignment v. SW broadcast
allocations in Regions 2 and 3...and THAT has been an
"action item" since WARC-79!

Those who wish changes to modernize radio regulations from
old, outdated rules have to keep prodding the "feds" to act.
Those who are indifferent can simply use the admonishment
of "face it, it is here to stay..." :-)

>As to the relevance, or lack thereof, of Amateur Radio during this past, or
>any other National emergency, I must take issue with you on this.

Of course you will...since I detect a need for individuals to
wrap themselves in patriotic group bunting...along with the
false use of the word "service" in amateur radio service.

In previous messages under this thread I brought out two points. The first was that "emergency communications" is NOT the proper descriptor of "health and welfare" communications. The second point was that the major news media seldom mention all the "emergency communications" done by radio amateurs. Everyone responded by pointing to the ARRL "news source."

The ARRL promotes amateur radio and also seeks to continue as the major amateur membership organization in the USA. There's nothing wrong with that. The problems that arise from that are twofold beginning with the "spin," the re-ordering of descriptions and events in its "news" to favor amateur radio. The second is that too many amateurs have little or no other "news" medium about amateur radio other than the ARRL. This can lead to a "belief system" that the ARRL "never lies" or that it is an "unbiased" news source. It IS biased. There are times when it lies by omission or phrase editing...not true lies, just a manipulation of statements that convinces readers/viewers about a situation or happening.

>Amateur Radio
>has always been involved in emergency communications and support when the
>jig is up. I don't have to defend that. It is a fact, backed up by

In general, yes, but the purpose and existance of amateur radio is NOT as an emergency communications service.

There exist today, and existed two decades ago, a HUGE structure of TRUE emergency communications in the US, manned and used largely by professionals. This is rarely mentioned by the ARRL in its "news." Some radio amateurs keep insisting that "cell phones always fail during emergencies" and the presumption that amateur radio equipment survives better than professional equipment. Cell phones work well (with the 911 number) for individual telephone subscriber emergencies. Emergency professionals do not rely on cell phones for their emergency communications but have their own radios and networks which are in use 24/7.

In late May of this year a group of climbers got stuck on Mt. Ranier. They called for help not on cell phones, but on an FRS radio. A schoolgirl heard them first, told her parents who notified emergency authorities. The US Army was in turn notified and an Army helicopter came to the climbers' aid. All that was on local, Washington state, and national news. That example indicates that emergency communications are neither limited to cell phones nor amateur radio. Was that incident included in amateur "news" media reports?

>supplies, food, and providing comms for the Red Cross. HF was busy as well,
>providing comm-
>unications for EOCs from Florida to New York. I was THERE, Lenny, not
>only as a ham, but as an authorized user of a Federal System called SHARES,
>operating on several FEMA HF frequencies as well.

That's good that you did useful work in SHARES. It is also
in the news media that SHARES stood down on the third
day after Day 9-11. That still does not relate to the common
misuse of amateur radio health and welfare communications
described as "emergency communications." There's a
difference.

You will have to answer the question "did hams volunteer for
work on the disaster because they were hams or did they
volunteer work because they were good citizens?" Having
a federally-issued amateur radio license does not
automatically make an amateur a better citizen.

>Finally, I just don't understand your hostility towards Amateur Radio and
>the CW requirement as well.

I have NO "hostility towards amateur radio." I DO have
hostility against certain INDIVIDUALS who use their
amateur radio licensees as some kind of noble attitude that
makes them "superior" in radio over ordinary citizens. I
have a hostility against the attitude that only They are
"permitted" to speak on the subject of "their" regulations.

The "hostility" label was generated by some PCTAs
who could not effectively counter NCTA subject
arguments. They turned the subject issue into a
personal issue with several NCTAs.

I have absolutely no, repeat NO, hostility to the use of
OOK CW morse coding. None. I DO have an opinion
that the morse code TEST for an amateur radio license is
needful. The FCC agrees with that. I take strong
exception to the morse code test regulation but it is not
"hostility." It is a strong opinion allied with strong debate,
not hostility.

Those who cannot stand debate had best leave.

>see how it's any of your beeswax considering that you stated you have no in-
>tention of joining the fraternity anyhow.

Maybe I don't, but maybe I really do. Which is it? It seems
that amateurs are also licensed telepaths and KNOW what
others think. Why must any debate about federal regulations
ALWAYS be centered around "personal desires?" Why do
so many PCTAs always use their own personal examples
as the "best" that others should emulate?

Why should "good" hams always accept what the ARRL says is "best" for hams? Why must there be blind obedience to someone else's ideas of tradition, goals, aspirations? Is skepticsm "evil?".

>
>1. My experience on the bands above 70 cm. is not zero.

Then what IS your experience? :-)

>2. Division by zero is undefined.

Tsk, tsk, mathematical error. A finite number divided by zero
results in infinity. Even dumb computers "know" that. :-)

Any expression of "0 / 0" is still zero. :-)

>3. The limit of the mathematical expression where both quantities approach
>zero is not necessarily zero.

This was not a case of "quantities approaching zero," it was
stated as "zero divided by zero." :-)

Apparently this all ties in with some strange mythology among
certain amateurs that amateur radio physics is "different" than
the radio physics in every other radio service. It isn't. Being a
legally licensed amateur means that one can access the
amateur microwave bands...such access does not carry with it
the personal ability to operate there...and "personal ability"
seems to be the new strawman argument in here. :-)

>>Sigh...I thought "more educated persons" could do simple
>>arithmetic accurately.
>
>I can. You obviously can't, because you think you can divide by zero.

"Obviously can't?!?" :-)

Nooooo. Tsk, tsk, I explained that "zero divided by zero" is still
zero, a null quantity that should be recognizeable fact to any

first-semester high school algebra student. :-)

N2EY cannot handle a mild tweak. :-)

Cecil:

Don't look now, but naturally the FCC won't claim that reducing code testing requirements is "dumbing down" the ARS. They have an axe to grind; one that doesn't get sharp unless they relieve themselves of the administrative burdens of the ARS any way they can. It just so happens that reducing/eliminating code testing is the axle upon which the sharpening stone revolves. I *did* read what the FCC said, and I'm going to tell you right now that I absolutely did not see them use the phrase "dumbing down" or anything like it. That phrase is being used by me and others who are simply telling the TRUTH about the effect of reducing amateur licensing requirements.

>Your
>family probably doesn't know Morse code. Does that make them dumb?

Only if they become ham radio operators under Post-Restructing requirements.

So the accomplishment of obtaining a ham license under the present
requirements has the effect of dumbing citizens down? Got any
proof of that, Larry? Exactly how much does a citizen's IQ fall
when he/she becomes a ham radio operator?

Do you know exactly how ridiculous you sound? Avoiding the
accomplishment of studying and qualifying for an amateur
radio license saves a citizen from being dumbed-down?

Only because you wish it were. Of course a ham who got an Extra class
license based on a 5wpm code test is dumbed down as compared to one who
passed 20wpm. I didn't invent this, just report it.

I don't need to be a referee to disregard the NCTAs. The easiest way to
disregard them would be to simply stop reading the newsgroup.

> >Doctor Lennie speaks! What can you tell us about your case of amateur
> >radio penis envy?
>
> Nothing. I don't have "radio penis envy." :-)

> Does Heil think his "radio penis" is enviable?!? :-)

It is "amateur radio penis envy", Len and you might want to seek
treatment for yours. The easiest way to cure it would be to get off
your duff and tackle a licensing exam.

> >Code testing is pretty well settled, Len. What will you advocate next?
>
> The amateur radio code test is still there. The issue is
> NOT "settled."

There you go again, Leonardo. You want "instant" everything.
All good things come to he who waits, I'm told.

> >The code testing issue is pretty well dead, Len. What will you advocate
> >next?
>
> The amateur radio code test is still there. The issue is
> NOT "settled."

There isn't any "instant" fix, Len. You'll have to be patient--either
that or learn 5 wpm.

> >But, Len--all newcomers are neophytes in any field. Why do you seem to
> >have a problem with that?
>
> Does Heil think I've never operated a radio before?!? :-)

You are not now nor have your ever been a licensed radio amateur.
You'll be brand new to ham radio.

> >If you ever enter amateur radio, you'll be a neophyte, a beginner.
>
> Does Heil think I've never operated a radio before?!? :-)

You're repeating yourself. You'll be an amateur radio beginner--a
neophyte. You'll have to obtain that first license to even be
considered a beginner. Better start boning up on those exams.

> >You insisted, Len. You snipped out the relevant portion where you
> >whined that code test has not yet fully gone away.

>
> Why? :-)

Why get moving? I think I see your problem in not having obtained a
license during your professed tweleve years of insterest in amateur
radio.

> >Do you haunt other newsgroups as well?
>
> Do I? Why not identify them? :-)

Are you writing to yourself or to me? It's slightly unnerving to have
your ask me to answer a question I've asked you.

> I really should look in on the Astronomy newsgroups to
> see if Heil has kicked the Schmidt out of them to be
> legally licensed astronomers... :-)

I'm not an amateur astronomer nor do I aspire to become one. I don't post lengthy rants in any astronomy newsgroups. It's strange that you've posted here for years, that you serve as an un-requested "advocate" for change in amateur radio licensing and that you aren't really interested in becoming a radio amateur.

> >Actually, Len, it wouldn't bother me in the least if you got off your

>
> Order in da court! :-)

You'd be a fool to go around making judgements in the course of your day to day life. Gosh! You'd have to make choices about who you'd like as your friends, what to eat, what clothing to wear, what political party to support. That stuff about judgements brings up a rather interesting point--if you don't make judgements, how'd you come up with the swell "advocate for the removal of morse testing" part time job?

Division by zero is undefined. Your repetition of a mistake does not make it
any less a mistake.
>
>Apparently this all ties in with some strange mythology among
>certain amateurs that amateur radio physics is "different" than

>the radio physics in every other radio service. It isn't.

The subject is math. Division by zero is undefined, Live with it.

>Being a
>legally licensed amateur means that one can access the
>amateur microwave bands...such access does not carry with it
>the personal ability to operate there...

Sure it does. "Operate" is defined by the FCC as being responsible for the operation of the station. That means the operator must possess a valid amateur radio license in order to operate. FCC's definitions, not mine

By definition, you have zero experience operating an amateur radio station.

> and "personal ability"
>seems to be the new strawman argument in here. :-)

Nope.

And the point of your troll is.....??

(enter answer here)_____

As for "ever needed", don't tell the thousands of victims of any
hurricane that who used our ham rigs to tell Mom they were still alive
and still had all their parts attached, properly.

In this attack, which only trashed 16 acres (luckily), I don't see
what ham radio is doing. But, of course, I'm not in the middle of it
and I don't think those that are need explain themselves to either of
us. There's plenty of working telephones in NY and DC.

But, when the whole place is blown away, most lines down and those
that work completely saturated, ham radio still has a great place in
emergency comms. Ask Central America!

Larry

ps - hams please note the multiple newsgroups to non-ham scanner

> is recruiting for that position at this very moment.

You're changing the context, Cecil. The original discussion was about the crew or a passenger having firearms. Armed law enforcement officers are a completely different issue.

> Neal Boortz
> has suggested that anyone with a valid concealed carry permit be
> allowed to bring concealed weapons onto commercial aircraft and
> be issued special fragmenting ammo.

Uh huh.

And what would prevent future hijackers from getting those permits? The hijackers were able to live here for years and get pilot training (and probably licenses) without raising any suspicions. There was an arrest of a suspected terrorist the other day who had a license to transport hazardous waste. Unless the permit process includes a VERY thorough check of everyone's background, it won't be of much help.

>Have you read, "More Guns,
> Less Crime"?

Nope. But I'm not against guns or their possession and use by responsible law-abiding citizens. What I'm against is simplistic "what if" scenarios that do not address the whole picture.

Did you know that it was OK for passengers to bring knives and boxcutters onto a commercial airliner?

>whiffed when someone disagrees with him, etc., etc.

Nope....You are well known for instigating these exchanges and then crying "VICTIM"...

Only YOU think that you are the innocent one. Everyone else can see for themselves.

>Nothing. I don't have "radio penis envy."

Yep. No penis TO envy, Dave.

>>Code testing is pretty well settled, Len. What will you advocate next?
>
>The amateur radio code test is still there. The issue is
>NOT "settled."

Yes it is. Only YOU continue to fight the war. The FCC has said so, and nearly every major adminisitration around the world has said so.

You "advocate" nothing but hate.

>>But, Len--all newcomers are neophytes in any field. Why do you seem to
>>have a problem with that?
>
>Does Heil think I've never operated a radio before?!?

>>If you ever enter amateur radio, you'll be a neophyte, a beginner.
>
>Does Heil think I've never operated a radio before?!?

Anyone (including you) can buy a radio and trun it on. Operating it PROPERLY (ie that pesky little phrase the FCC calls "good Amateur practice) takes experience.

That's one thing you DON'T have as it pertains to Amateur Radio...

>The amateur radio code test is still there. The issue is
>NOT "settled.

Yes it is. Only your wife's husband is too stupid to accept it.

>>Do you haunt other newsgroups as well?
>
>Do I? Why not identify them?

This one is one too many.

>Yeah, Dave, it must be hell to have someone in here who
>has an opposite viewpoint to yours...someone who
>doesn't salute your insignia nor "drop down and give you
>ten" on your command. Life is tough, ain't it?

Only when dealing with arrogant fools such as yourself.

And yours is not a "viewpoint"...it's a pattern of antagonism and slurs.

You're just a mean old Putz. Period.

You really should read what the FCC said about Morse code
skill, Dick. They said Morse code skill has absolutely
nothing to do with anything except Morse code skill.

Consider a General who can do 40wpm but is weak in knowledge
of physics. He studies diligently and finally acquires enough
technical knowledge to pass the present Extra exam. You label
him as "dumbed-down". Doesn't it bother you to be so irrational?

Cecil:

No, they are just Extras who got that way as the result of a dumbed-
down set of licensing requirements. Therefore, they are lower in
status than Pre-Restructuring Extras, who had to succeed within
the parameters of a more comprehensive and challenging set of
licensing requirements. And, unfortunately, there is nothing they can
do to recover that status, or the identification with "dumbed down"
licensing requirements. I know it's not fair, and not their fault, but
their feelings don't matter. They are what they are, Extras who got
that way as the result of dumbing-down licensing requirements.
Their privileges are the same, the license class is named the same,
but they got it by outliving a significantly more challenging set of
licensing requirements. End of story.

I'm talking about anyone who will be able to *legally* carry
firearms onto planes. The discussion is whether to make it legal
for pilots (and other approved citizens) to carry firearms onto
airplanes. Seems to me having the good guys armed and the bad
guys unarmed would be the best of all possible worlds.

> And what would prevent future hijackers from getting those permits?

The people who issue the permits, of course.

> Did you know that it was OK for passengers to bring knives and
> boxcutters onto a commercial airliner?

Of course. I carry a legal limit knife and have had it measured
by airport security many times. If those flights had originated in
Texas, the passengers would have been as well armed as the hijackers.

Come on Steve, Lennie IS the biggest penis around. Heck, around here we refer to him as one of the biggest DICK's on the NG :-) No offense to the other Dick's.

In fact, I have it on good authority that for Christmas last year, Lennie's wife bought him a giant body condom, with the card inscription..My Dearest Leonard, if you are going to act like a prick, I though you should dress like one. ha ha ha very funny stuff

BTW, Putz IS NOT yiddish for anus and LHA would have led many to believe.

Schmuck is yiddish for anus, putz is yiddish for penis

To Len I say

You're a Nukshleper and a Moyshe Pupik You are at best Shvuntz and a Alter kakher. You haven't the slightest clue about Mame-loshin .

Ver derharget, A broch tsu dayn lebn, Ech hob dir in drerd

You are truly a putz and a schmuck

Remember Anderson, Goyim like you should never try to use words they haven't an understanding of..

>Bill K2UNK

Bill:

Well, you slithered out of that one pretty neatly. However, I do give you credit for coming up with a marginally logical argument. Unfortunately, we're talking about something completely different than those other formerly necessary but now strictly hobbyist activities. Ham radio has, as it's basic attraction, one very powerful and immediately satisfactory characteristics -- the ability to permit a person to project himself globally through direct voice communication with other, similarly oriented people. This instant contact is highly gratifying because it denotes a powerful capability which the individual ham can command at will with few restrictions -- as long as he has the requisite license. It is the jealousy over *having* this powerful capability which brought about the impatience and eventual hatred of the Morse code testing requirement. The requirement stood in the way of the ham radio capability the majority of prospective hams really wanted -- the ability to pick up a microphone and talk to someone far away. The true nature and value of Morse/CW communication was known only to those who went through the process of learning it and achieving useful proficiency in it as part of their ascension into the ranks of full-privilege HF phone users. Once they arrived

at useful CW proficiency, they either embraced it as their primary HF mode, or they kept using it as a valuable fallback mode when voice communications became difficult.

Those who simply couldn't find the motivation or desire to learn the code, even as a means of acquiring their actual goal of full HF phone privileges, decided instead to lobby for the reduction and/or elimination of the code testing requirements. The rest is history. There is no licensing process involved in horseback riding, archery, antique automobile restoration, blackpowder firearms shooting, wooden boat building, or any other sport or hobby which once represented a valuable and necessary skill. One cannot make a logical comparison between these activities and ham radio.

Steve:

I am in a financial position where I can buy any top-of-the-line amateur transceiver off-the-shelf as well. However, I use my old reliable circa 1987 Icom IC-735, with a circa 1982 Icom IC-730 as a backup. When you decide that you can afford to go out and purchase a top-of-the-line Yeacomwood, you may also decide that your old reliable 757 GXII is still serving you adequately and well. Let Lennie the Licenseless go out and buy a new Yaesu FT-1000MP or whatever. He'll have the best sounding signal on 11 meters, until Riley catches up to him! Meanwhile, we'll be on the ham bands with our trusty old rigs, enjoying HAM radio!

It did not convert to anything but like the Advanced you can renew it for the rest of your life. It is, however, evidence of a code test so you are three writtens from Extra.

Hi John,

Sorry, but it didn't convert to anything. When the FCC "restructured",
they allowed Novices and Advanced Class licensees to renew as long as they
don't allow thier license to lapse past the grace period.

You'll still have to upgrade, however your Novice license now means you
will only need to do the writtens. The 13 and 20 WPM code tests were retired
and 5WPM is "it".

Good Luck!

> such a big deal out of it?

Cecil, didn't your mom teach you that it takes TWO to argue. You could have responded in agreement with my observations about the differing reasons one might have to upgrade - since they are in fact true. By you decided to take a different road; the argumentative one. That was your choice. I will not take the blame for it.

Is the word rhetorical a synonym for the word assinine?

I agree they are true. I never said they weren't true.
It is simply my opinion that some of your reasons are silly
and/or irrational even though they are true. (Last time I
checked, you weren't allowed to dictate my opinions.)

Not true, Larry. There are thousands of hams who passed a Morse code test and vowed never to use Morse code again. One was my high school friend who was licensed in the early 50s. He doesn't recognize at least half of the Morse code characters at any speed today.

> There is no licensing process involved in horseback riding, ...

Dropping the Morse code requirement is like dropping the stick shift requirement from driver's license exams. Now what do you say?

There's no evidence that "he" is on any side. Your rhetorical question,
as usual, has a false premise.

You made a bunch of statements, Cecil. You changed from "100% satisfied with VHF/UHF-only privileges" to "100% satisfied with a tech license" somewhere in the middle, which changed the meaning quite a bit.

Musta been too much ExLax or something.

> N2EY agrees.

I agree that you are right about the Tech license statement and that Jim and I are right about the "VHF/UHF-only privileges" statement.

> If someone wants a 1x2 or 2x1 call
> then that is obviously prima facie evidence that they are
> not 100% satisfied.

With a Tech license. Someone can be 100% satisfied with VHF/UHF-only privileges and still want a 1X2 or 2X1.

I would not be surprised if you show up here with a 1X2 one of these days, Cecil.
>
> So there is nothing to concede regarding my statement and

> that the novice license is no longer in use.

Hello John,

Actually, the Novice is still in use. The FCC just isn't issuing any
new ones.

> So my question is what license did my novice convert to?
> Technician or General.

Neither - it's the same as before.

You can upgrade easily, however, with no loss of privileges:

Pass Element 2 (35 question Technician written) and you get a
Technician license

Pass Elements 2 and 3 (35 question Technician written and 35 question
General written) and you get a General license

Pass Elements 2, 3 and 4 (35 question Technician written, 35 question
General written, 50 question Extra written) and you get an Extra
license.

Sample/practice tests and the question/answer pools are available at
several websites.

Good luck!

73 de Jim, N2EY

>>>1. My experience on the bands above 70 cm. is not zero.
>>
>> Then what IS your experience? :-)
>
>It's infinitely more than your experience operating an amateur radio station.

That's not an answer, it is misdirection into another subject
and an attempt to avoid an answer. :-)

>>>2. Division by zero is undefined.
>>
>> Tsk, tsk, mathematical error.
>
>Nope. Basic 4th grade math - division by zero is undefined.
>
>> A finite number divided by zero results in infinity.
>
>Nope.

Sorry, in basic math, that rule is correct...but such a term
cannot be calculated since infinity is infinity. [there are
higher disciplines in mathematics that work with such
things, such as an infinity of infinities, but such isn't taught
in public schools]

>> Even dumb computers "know" that. :-)
>
>What is the binary expression for infinity?
>>
>> Any expression of "0 / 0" is still zero. :-)
>
>Nope. It's an undefined expression.

Sorry, wrong again, minus J. You aren't playing by the rules
in arguing, are using misdirection by using only part of what
was stated twice. "Zero divided by zero is zero."

>> This was not a case of "quantities approaching zero," it was
>> stated as "zero divided by zero." :-)
>
>Division by zero is undefined. Your repetition of a mistake does not make it
>any less a mistake.

That was Miccolis' first mistake. He "spun" that to insist that
the statement meant "divided by zero." It was not. It was
"zero divided by zero."

>>>I can. You obviously can't, because you think you can divide by zero.
>>
>>"Obviously can't?!?" :-)
>
>Yes. Anyone who posts division by zero with a defined result obviously
>doesn't knwo much math.

Mistake repeated. Spin repeated. My statement was "zero
divided by zero" not "<anything> divided by zero." :-)

>> Tsk, tsk, I explained that "zero divided by zero" is still
>>zero, a null quantity that should be recognizeable fact to any
>>first-semester high school algebra student. :-)
>
>Nope. Zero divided by zero is not zero - it's undefined. In algebra as well
>as basic arithmetic.

The second major mistake. It is clear in fundamental
mathematics and algebra that a zero numerator in a
term will result in zero regardless of the denominator.

A non-zero numerator divided by zero results in the
"special case" which is infinity as a result.

Zero divided by zero will result in zero. It is not a "special
case." It is just zero.

>>N2EY cannot handle a mild tweak. :-)
>>
>Nonsense.

-j Miccolis got tweaked, got all flustered and made two major
mistakes, tried to "spin" his way out of it. The spin resulted
in trying to maintain his position well beyond long-established
mathematical rules.

>LHA cannot handle even simple math. Nor can he stand being corrected when his
>numerous mistakes are pointed out.
>
>Typical.

-j Miccolis got caught in a set up. :-)

Typical?

Yes. Typical. PCTAs are like that, officious and humorless,
demanding to be "right" regardless of being wrong... :-)

In article <3BAAAD34.2D8BD55C@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>Right. You DID manufacture your "facts".

Nope. :-)

I've just pointed out true facts as they have appeared
publicly. I don't accept personal opinions of the PCTA
as either "facts" or "truth" other than those being the
personal opinions of the PCTA.

The code test issue has NOT gone away and it won't
until some time after WRC-03. That is over a year
from now, hardly "instant." The USA administration
has not yet drafted any agreement on the three parts
to ITU-R Item 1.7 (the NTIA has a preliminary draft on
code testing but the ruling ARS PCTA fundamentalists
are sure to reject it).

Heil practices a great deal ot misdirection on trying to
make the code test elimination a "personal" issue.
He must because he has not yet demonstrated any
viable position for the FCC to keep it...other than
bluster, name-calling, and general demands to take
an amateur radio test "now" or shut up.

Heil claims that no one can know anything about amateur
radio until they pass the amateur license test. Not only
is that specious but supremely arrogant. Anyone un-
licensed cannot pass a test if they know nothing about
the test subject.

Heil cannot argue the subject except on his terms and
then he misdirects any argument into attacks on the
person holding views contrary to his. That's not discussion,
that's not debate, that's not argument.

To Heil it must seem that the code test issue is "settled."
He has his license, does not care about newcomers
except that those should do as he did. That viewpoint
seems universal, almost fundamentalist in US amateur
radio. Not only does such an attitude violate the First
Amendment, it indicates an insular "turf" feeling that
is unattractive to newcomers. Heil does not see that.
Heil feels "hurt" when general non-person-specific
statements against his beliefs are perceived to apply to

him.

There can be NO discussion on the code test issue with
Heil as demonstrated. He allows only those "facts"
which he judges to be "facts." There can be NO
discussion on issues with Heil unless all agree with
him.

manufactured artificially by the PCTAs.

>I don't need to be a referee to disregard the NCTAs. The easiest way to
>disregard them would be to simply stop reading the newsgroup.

Then do so. It is quite clear to everyone that you will not
argue any issue on the subject when anyone has an
opposite opinion.

>It is "amateur radio penis envy", Len and you might want to seek
>treatment for yours. The easiest way to cure it would be to get off
>your duff and tackle a licensing exam.

So...Heil does not permit any discussion on federal regulations
unless someone is personally involved with those regulations?

Is there some metaphysical revelation after passing an amateur
radio license examination that reveals the "real truth?" :-)

No. The "truth" given by Heil and others is simply that they
cannot abide any argument against what they had to do to
meet regulations. Everyone must meet Their standards or
be considered undesireable. They also consider their
amateur license to carry with it some divine attribute that
they and only they can judge "truth." That only exists in
their minds.

>> >Code testing is pretty well settled, Len. What will you advocate next?
>>
>> The amateur radio code test is still there. The issue is
>> NOT "settled."
>
>There you go again, Leonardo. You want "instant" everything.

? The code test is still required for a US amateur radio license
having below-30-MHz privileges. It's been over a year since the
latest US ARS regulation restructuring and the code test remains.

ITU-R S25.5 won't be changed until the year 2003. WRC-03 is
over a year away. How is that "instant?"

>There isn't any "instant" fix, Len. You'll have to be patient--either
>that or learn 5 wpm.

...that leads into the insistence by Heil and others that the
ONLY ALLOWED discussion on morse code testing is by

already-licensed radio amateurs.

Eh? I ride bikes and sail boats even when other transportation
modes *are* available (I reject your characterization of them as
not "modern"; the materials technology is right up to date.)
Horses, I don't do.

Think again. Zero divided by zero equals one as a special case
evaluated by limit theory.

The limit of f(x)/f(y) where both the numerator and denominator
approach the same value at the same rate is ALWAYS 1 .

It's first-year differential calculus.

>as either "facts" or "truth" other than those being the
>personal opinions of the PCTA

That's right....AND...You don't even accept the "facts" of third parties
or organizations that don't sound just like you.

Convienient, I'd say.

>The code test issue has NOT gone away and it won't
>until some time after WRC-03.

And is still irrelevant becasue you will still be in here lying or
harrassing us about something else.

And YOU will still be irrelevant because you will STILL be unlicensed and
unexperienced in matters of Amateur radio practice.

>Heil practices a great deal ot misdirection on trying to
>make the code test elimination a "personal" issue.

Pot/kettle/black. With Attititude.

>Heil claims that no one can know anything about amateur
>radio until they pass the amateur license test.

And he is partially right. Pass a test AND be active in matters of
practical Amateur radio. You are neither licensed nor knowledgeable in such
matters.

>Not only
>is that specious but supremely arrogant.

And your "I am an engineer and know everything about radio" attitude is
WHAT...?!?!

>Anyone un-
>licensed cannot pass a test if they know nothing about
>the test subject.

Uhhhh...why don't you read that sentence again Oh Mouthy One and tell us
why it's really, REALLY stupid.

>Heil cannot argue the subject except on his terms and
>then he misdirects any argument into attacks on the
>person holding views contrary to his.

"Nazi" "Jackbooted" "Thug" "Elitist"

Sounds really subject-oriented and professional to me.

>That's not discussion,
>that's not debate, that's not argument.

The debate is over and the only argument is why do you continue to harrass
and haunt a newsgroup for an avocation in which you have no vested
interest...?!?!

>He has his license, does not care about newcomers
>except that those should do as he did.

You are, Lennie, as usual, wrong.

>So...Heil does not permit any discussion on federal regulations
>unless someone is personally involved with those regulations?

Yep. You have repeatedly demonstrated ignorance of Amateur practice. You
can quote line and verse from Part 97 and others, however you ahve absolutely
no idea what you are talking about.

It's just like George Clooney spouting off lines of medical jargon on
"E.R."...Sounds good...now what did it mean?

>Is there some metaphysical revelation after passing an amateur
>radio license examination that reveals the "real truth?"

Nope...but there's revelation in practical experience. Of which you ahve
none.

>Everyone must meet Their standards or
>be considered undesireable.

A Leonard H. Anderson lie. Only meet the CURRENT requirements for
licensure...ANY Amateur license Lennie. AND participate in the program.

>They also consider their
>amateur license to carry with it some divine attribute that
>they and only they can judge "truth."

License + Experience = Truth.

You have none of the three.

Oh well....Still you're out in the cold...

You don't read or can't comprehend what you've read.

> Heil claims that no one can know anything about amateur
> radio until they pass the amateur license test. Not only
> is that specious but supremely arrogant. Anyone un-
> licensed cannot pass a test if they know nothing about
> the test subject.

I say that you can't know much about what it is to be a radio amateur
until you've become one. You can't get everything you need to know
about operating from a magazine, a book or from watching a video.
As far as passing the test, you yourself have said on numerous occasions

that obtaining an amateur ticket is only the beginning. In other words, you have not yet arrived at the beginning. You aren't yet a neophyte.

> Heil cannot argue the subject except on his terms and
> then he misdirects any argument into attacks on the

> statements against his beliefs are perceived to apply to
> him.

Indeed you don't make many non-person-specific (what a kludge of a term) statements. Newcomers do not now have to do as I did. I still help newcomers as I have in the past. You aren't yet a newcomer and your attitude makes it pretty unlikely that many folks would extend a hand of welcome to you. You seem to be the main man when it comes to having your feelings hurt. Your talk of "universal" and "fundamentalist" is so much blather.

> There can be NO discussion on the code test issue with
> Heil as demonstrated. He allows only those "facts"

Gee, you are now in the position you have used on others in the past: telling someone to leave the newsgroup. That's simply another case of you using the techniques you ascribe to others.

> >It is "amateur radio penis envy", Len and you might want to seek

I neither permit nor deny discussion. You've made your comments here
and to the FCC. I just don't recognize your self-declared advocacy in a
matter in which you've never been involved.

> Is there some metaphysical revelation after passing an amateur
> radio license examination that reveals the "real truth?" :-)

You'll have to wait until you actually pass an exam in order to have the
answer.

> No. The "truth" given by Heil and others is simply that they

Actually, Len., the code test was reduced to 5 wpm for all classes of HF
license. That was a major step. That you are not satisfied with the
speed of progress is another TSer. You have open to you only a few
avenues of action. You can pass an exam at the new lower speed level.
You can continue to rant here. You can give up in disgust. Can you add
any others?

> ITU-R S25.5 won't be changed until the year 2003. WRC-03 is
> over a year away. How is that "instant?"

It isn't instant. That's what I've said. You need some patience.

> >There isn't any "instant" fix, Len. You'll have to be patient--either
> >that or learn 5 wpm.
>

Nope, you're wrong, Jim. The sentence with "100% satisfied
with VHF/UHF privileges" was NOT a statement - it was a
question. A question is asking something, not asserting
something. Shirley you know that.

Or it equals 0, according to that same limit theory:
lim(x->0) of 0/x is zero.

> The limit of f(x)/f(y) where both the numerator and denominator
> approach the same value at the same rate is ALWAYS 1 .

I can think of a counterexample, Consider the canonical
continuous-except-at-zero function without bounded variation,
sin(1/x). This is the one that as x approaches zero, the value varies
between -1 and 1 ever faster. So no matter how small an epsilon you
choose I can pick x and y greater than zero but less than epsilon so
that f(x) is anything I want between -1 and 1, and f(y) is anything
else I want between -1 and 1, so I can make f(x)/f(y) as large as I
want. I only have to show it exceeds a delta I gave you before you
picked your epsilon to win. (I'm not even sure your claim is true if
f does have bounded variation around zero.)

It's because there are good arguments that 0/0 is 1 (Phil gave it)
and that it is 0 (Len pointed that way, and I polished it up)
that we say "division by zero is not defined"

Rich

John:

Your Novice license is still a Novice license, and always will be, since it can be renewed indefinitely. You can take a few more simple, multiple-guess written tests and become a dumbed-down, Nickle General or Nickle Extra, since you already possess proof of having taken and passed a 5 WPM code test. Congratulations -- you've outlived the Morse code testing requirements of a much more comprehensive and challenging licensing system, and can now get an HF mic in your hand -- if that's what you want to do!

>today.

I've always known that, Cecil, and have mentioned it several times --
mainly to demonstrate the fact that HF voice privileges are the
one aspect of ham radio that attracts the most people to the hobby.
However, these people, your friend included, prove nothing to support
your NCTA agenda.

>> There is no licensing process involved in horseback riding, ...

>Dropping the Morse code requirement is like dropping the stick
>shift requirement from driver's license exams. Now what do you
>say?

As a person who owns a car with a 5-speed manual gearbox, and
realizes many benefits and advantages therefrom, I'd say that today's
requirements for a driver's license are somewhat "dumbed down."
And considering the lack of quality among most of the drivers on
the road these days, there is a lot of evidence to support my
position!

> The limit of f(x)/f(y) where both the numerator and denominator
> approach the same value at the same rate is ALWAYS 1 .
>
> It's first-year differential calculus.

Sure. I remember that, or close to it (slightly different presentation
as I recall)...and thats also a TRAP with real numbers. :-)

Phil, think real world. Let the numerator be zero. Make the
denominator an extremely small number. What is the
term value? Zero. Make the denominator smaller yet. The
term's value remains zero. Make the denominator the
smallest possible value in the universe...the term is still
zero because the numerator is zero.

The only time one can get to some "special case" is the
infinitely-small denominator condition. THAT is the
so-called "justification" (instructors disagree on whether
that is a numerical proof) of certain differential expressions.

If you do programming of numbers at all, you may run
into the "division by zero" program stop. There's no
computer on earth that can turn out an infinite value
as a result. They may come "close" but "close" isn't it.

Please supply some source code lines that allow
calculation of (0 / 0) = 1. Use any variable precision
available.

Actually, Minus-J Miccolis wasn't arguing anything but
"division by zero." He wouldn't stay with what I wrote.

Going back even further, if the "zero divided by zero"
is really a true 1.0, then what is the other name for
1.0? UNITY. :-)

Does any PCTA accept "UNITY" with any NCTA? :-)

...only in "special cases!" <bseg>.

Message-ID: <v12oqt4dn3rcqfc1tctp5jvot4u0s0iscc@4ax.com>
Source record: 20676

I have a tech license from when it required code (5 WPM) and the test questions. With the new licensing requirements, what do I need to do to upgrade to general class? Do I have to retake the code part of the exam?

I believe I have already taken both the now requred code and test exams with my old license.

Thanks for any guidance you can provide.

>the combined numbers of new extra and general classes.

Nope. Not true. Nobody, least of all me, denies that fact.

Most hams today start out as Technicians. That's obvious. Why do you keep repeating that simple fact over and over? Does it have some special significance?

>He also puts spin on all those upgrading from "lower" classes
>to extra to indicate that extra numbers are rising...by not
>mentioning the decrease in the class numbers of others.
>
No "spin", just a simple statement of fact. The decline in the number of licenses in classes like the Novice and Advanced are to be expected because no new licenses in those classes are being issued. In addition, restructuring made it easier for many holders of those licenses to upgrade.

>>> PCTAs will rationalize that the Technician class is really

Nonsense.

It's pretty common knowledge that there is no code test for the Technician. Been that way for 10-1/2 years.

>>Translation: LHA has no clue as to what the numbers mean, nor the
>>trends that have been obvious for years.
>
>Proper Translation:

(N2EY)

(N2EY's)

>summation is summarily
>"dismissed" as "in error." :-)

Nope. Just when there denials are based on faulty logic. Like LHA's.
>
>An example of spin -
>
>>The number of Techs in the AH0A data grew steadily until March 2001,
>>then started to fall. The number of Extras continues to rise steadily.

How is this "spin"? Is it not true?
>
>Speroni changed his tabulation scheme by combining
>Technician-Plus numbers with Technician numbers.

So?

>Those
>are still separate classes even though no new Technician-Plus
>licenses are granted. The spin comes from trying to have
>both Technician-Plus and Technician categorized as just
>"Techs" as if they were only one class.

What's the difference?

LHA ignores some important facts:

- Many Tech Pluses and Techs are upgrading to Extra or General.
- A Tech who passes Element 1 gets Novice/Tech Plus HF privileges, even though his/her license is not modified and still says "Technician". This there still exists the equivalent of the Tech Plus license today, for new holders.
- It was pointed out in my original post that the AH0A numbers combine the Technician, Technician Plus and "Tech with HF" license numbers.

The important question is this: Why did the Technician totals in the AH0A tabulation stop growing in March of 2001 and begin to decline?
>
>Past threads have stressed the "fact" (supposition really)
>that the (no-code-test) Technicians' class totals would be
>dropping by large numbers as soon as renewal time came
>about.

Did I ever say that would happen? Nope.

>That did not happen.

How do you know?

Note this: The Technician licenses lost its code test in February 1991. None of them expired until February 2001 (10 year license term). The AH0A data shows the combined totals growing until March 2001, then starting to drop. Coincidence? Maybe.

One thing is certain: The number of new Technician class licenses and upgrades to "Technician with HF" from Novice is less than the number of expirations, cancellations and upgrades from the combined total.

>The next claims by the same
>group now wish to lump two separate classes together
>under the title of "Tech" since they seem to categorize
>such "Techs" as inferior or the "lowest caste."

Utter nonsense. Balderdash. Spin of the worst sort by LHA.
>
>The number of extras is rising due primarily from "upgrades"
>from other classes (any of the other classes may upgrade,
>jumping "higher" classes).

True. Is that a bad thing? Why does it bother you so much that there are so many of us Amateur Extra licensees, and that are numbers are growing so fast?

Soon we Extras will exceed 100,000. The Novice and Advanced class are already smaller than the Extra, and the General is only slightly larger (35% or so). The growth rate of the Extra class since April of 2000 is in excess of 20% per year! And it shows no sign of stopping.

Maybe, in a few years, we Extras will be the largest US Amateur Radio license class. BWAAAHAAAHAAAAA!!!!!!! ;-)

(N2EY)

>spins by omission of
>differentiating between NEW extras and upgrades to that
>class...and for the latter, omits the decrease in those
>classes.

No spin at all, except by LHA.

What does it matter whether an Extra is "new" or an upgrade from a lower class license? We Extras are all equal in rank, all having achieved the highest class Amateur Radio license offered by the FCC. Some have met different requirements than others, and followed different paths to the top of the mountain, but that is of little consequence. All who can meet the requirements, and who follow the rules, are welcome! The more the merrier, I've always said.
>
What LHA denies is that large numbers of hams, including new Technicians, are upgrading to General and Extra. LHA "spins" by obsessing over "new" licenses and ignoring upgrades, many of whom are post-restructuring "new" hams.

>All of that is pure spin to attempt making amateur extras
>look good

(N2EY)

> is an extra) and technician class
>look undesireable.

All classes of amateur radio license are desireable. Which is most desireable is in the eye of the beholder. As W6RCA has shown, if someone is 100% satisfied with a particular class of license, there's no reason to upgrade.

LHA ignores the fact that there is only one code test left, but three written tests. All Extras have passed the written tests as well as the code test.

>That seems to tie in with boosting the
>code test as the highest attribute of amateurism. :-)

Translation: LHA still doesn't know what the numbers mean.
>
>Sin by omission is still sinning. :-)

Then why do you do it?

The lack of a signature by LHA/Len Anderson/Lenover21/Lenof21/Avery Fine/nocwtest is a form of spin in itself.

4437. Amateur Radio At Ground Zero

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-22 04:03:25 UTC
From: n2ey@aol.com
Message-ID: <20010922000325.02959.00000027@nso-fj.aol.com>
Source record: 20678

From the ARRL Letter, Vol 20, No. 38:

==>WORLD TRADE CENTER AMATEUR RADIO VOLUNTEERS BEARING UP WELL

New York Amateur Radio Emergency Service and Radio Amateur Civil Emergency Service volunteers generally are in good spirits, but tired, says New York City-Long Island Section Emergency Coordinator Tom Carrubba, KA2D. "The mood is positive," he said, more than a week into the grim reality of the World Trade Center attack response. "Overall, it's going very, very well. Everybody's settling into the routine of the operation."

Two dozen or more hams per shift are covering communications and logistical support for the American Red Cross as well as supplementing communication for the New York City Office of Emergency Management. "It's a great effort every day, 24/7, and it's expanding as we get more requests." A single, multi-purpose ARES/RACES net is being maintained on the 147.000 MHz repeater in Manhattan. New York City District Emergency Coordinator and RACES Radio Officer Charles Hargrove, N2NOV, is serving as the incident commander.

At this point, Carrubba said, the need for volunteers is being largely covered by amateurs from the Greater New York City Area--which includes New York City and Long Island, Eastern New York, Connecticut and Northern New Jersey. Hams have volunteered from all over, however, including at least eight Delaware-Lehigh Amateur Radio Club members from from Pennsylvania's Lehigh Valley.

Hams are deployed to 13 American Red Cross shelters, two OEM sites, several staging areas, and Red Cross headquarters, and as net controls. At any given time, up to a half dozen amateurs are posted just outside the secure perimeter of the so-called "Ground Zero" World Trade Center site, where Carrubba described conditions as "terrible." Volunteers there have been asked to provide respirators and other protective clothing. Shifts at all locations are 12 hours long.

Carrubba explained that Amateur Radio volunteers are being rotated in and out of areas and duties in an effort to equalize the stress. "The first 30 or 40 hours everybody does 'the iron man act,' I call it, because they're running on adrenaline," he said. After that, everyone gets some rest and unwinds a little bit. "The people that are going back are fresh," he said.

Since September 11, more than 350 hams have volunteered in excess of 5000 work hours.

Carrubba anticipates the Amateur Radio support operations to continue for some time to come, since the normal telecommunications systems remain disrupted or problematic. "The communications in the shelter are being used like telephones," he said. Telephone service is available, but it can take

15 or 20 tries to get a call through. Carrubba said net traffic has been substantial, although there are occasional lulls.

Many more volunteers will be needed before the ARES and RACES operation stands down "Right now our task is a long-term effort, Carrubba said. "The schedule is being filled in on a day-by-day basis." To date, more than 200 individuals have signed up via the World Trade Center Disaster Relief Communications Web site, <http://wtc.ab2m.net>.

Carrubba expects that Amateur Radio assistance might be needed at least another week and possibly longer. "As long as there's a need for communications, we will be there," he said.

In the meantime, REACT International is seeking additional Amateur Radio and licensed GMRS users, primarily to support the Salvation Army's relief efforts in New York. "We still need volunteers," said REACT International Secretary Lee Besing, N5NTG, who added that some shifts on Wednesday went unfilled. "They're burning out and having to return to their jobs," he said. REACT is now running 20 volunteers per shift. Volunteers should visit the REACT International Web site, <http://www.reactintl.org/tragedy_09112001.htm> or contact Charles Bessels, <NYCHelp@reactintl.org>.

There are Smith Chart questions on the Extra class exam, Larry,
and Smith Charts are much more useful than Morse code. Virtually
every RF designer uses them.

I've known many youngsters who "idolized the hippie days" and have tried to mimic them. Before this incident last week I would never have dreamed that there was a way they would truly learn what a divisive time that was in our country--and how much hate and contempt there was despite the popularity of the "peace, love, dove" theme. It was there, to be sure--but not without cost to families through wrenching battles that kids of that time had with their very conservative parents, and not without great loss at places such as Kent State. I was at the tail end of the entire era; and I don't remember it with any great fondness.

Just for expressing on the air the thought I did below (in the post), this week, I was told I was either for the United States or against it. We have come full circle.

Please don't let your passion for our country, your religion, your beliefs, be the motivation to belittle others for theirs. We are all in this together.

Larry,

I don't like getting inot these kinds of things, but in this case I have to.

You ahve absolutely NO idea what may ahve kept this fellow from participating actively in Amateur Radio.

Perhaps it was simply a lack of interest, or, God Forbid, he had circumstances like mine that dictated his attention elsewhere. In any case, he's here and wanting to be a part of this.

Why did you have to take a swipe at him? Is this how Human Resource Managers actually MANAGE thier resources?

This man is due an apology. An UNCODITIONAL one. He made a sincere, well framed inquiry and deserved a like-answer.

What Say?

Steve

So far we have yet to see any such "fallback mode" need
on anything but anecdotal single incidents at a rate that is
so low it makes no case at all for a requirement.

>Those who simply couldn't find the motivation or desire to learn
>the code, even as a means of acquiring their actual goal of full
>HF phone privileges, decided instead to lobby for the reduction and/or

>antique automobile restoration, blackpowder firearms shooting,
>wooden boat building, or any other sport or hobby which once
>represented a valuable and necessary skill. One cannot make a
>logical comparison between these activities and ham radio.

We obviously disagree. The licensing isn't the issue as to this
thread...the continued USE is. My "marginally logical argument"
explains why CW use is likly to continue. You now attempt to
justify the continued need for the requirement because you
now argue for something more than the limited numbers (whatever
those numbers end up being) which will be there and will continue
to garber new users without a license requirement.

Cheers,
Bill K2UNK

If your technician license was issued prior to 1987, then all you need to do is
to prove that fact in order to upgrade to general.

The old Ken Iverson APL language and its APL\360 implementation did take 0%0 as being 1 (where % is meant to be the old division sign, done in APL\360 by keying -, backspace, :.) Iverson thought that any answer was better than just giving up.

> There's no
> computer on earth that can turn out an infinite value
> as a result. They may come "close" but "close" isn't it.

Not true. Modern floating point processors following the IEEE floating point standard do have special bit patterns that mean "positive infinity" and "negative infinity", plus "indeterminate" (also called "NaN", for "Not a Number".) One can run in different modes, some of which pull the emergency brake when division by zero happens, some of which record the result as "infinity" with the proper sign. There's a whole set of fairly sensible rules about operations with infinities and indeterminates, for example infinity less any number is infinity, infinity+infinity is infinity, infinity-infinity is indeterminate, indeterminate plus anything is infinity.

Rich

The KEY to that answer is the DATE you took the technician test.

IF you were licensed before (FEB 1987 I think) then you took the SAME
written test as the General and you will be able to do a "paper only"
upgrade to General.

IF, however, you were licensed after FEB 1987 then you did NOT
take the General written and you will have to pass the written General
to upgrade.

Hope that helps,
Bill K2UNK

> Thanks for any guidance you can provide.

1. Keep the old ticket. It is the best proof you have.

2. You are out of the code test business. The license will get the credit.

3. If it was one that required Element 3 written, you are a General needing
only paperwork; if not you take Element 3 for the General and 4 for the
Extra.

4. See your friendly neighborhood VE to get your particular situation ironed
out.

>You really should read what the FCC said about Morse code
>skill, Dick. They said Morse code skill has absolutely
>nothing to do with anything except Morse code skill.

No, that's not exactly what the FCC said, Cecil. They said that passing a Morse code test was nothing more than an indication of Morse code skill. They also said such a test served no regulatory purpose other than meeting the treaty requirement.

But that's just the FCC's opinion - doesn't mean it's true or false.
>
>Consider a General who can do 40wpm but is weak in knowledge
>of physics.

Is physics on the written exam?

>He studies diligently and finally acquires enough
>technical knowledge to pass the present Extra exam.

You said he was "weak in physics" not "lacking in technical knowledge".

>You label
>him as "dumbed-down".

"Dumbed-down" is an emotionally charged term for "reduced requirements". Just like the use of "forced" is an emotionally charged term for "required by circumstances".

The requirements were reduced back in April of 2000. Big deal - it wasn't the first time that happened. Back in 1953, the requirements for all amateur privileges were reduced so that instead of needing an Advanced or Extra, US hams only needed a General or Conditional.

Truth doesn't have to match the facts. If it's the FCC's opinion,
it's true by definition since they make the rules.

> Is physics on the written exam?
Of course, all the technical stuff on the exam is physics. Rules and

regulations are not technical stuff.

> You said he was "weak in physics" not "lacking in technical knowledge".
Those mean the same thing to me as far as the ham exam goes.
> Back in 1953, the requirements for all amateur
> privileges were reduced so that instead of needing an Advanced or Extra, US
> hams only needed a General or Conditional.
Yep, I had all amateur frequency privileges back then.

Larry must do it on a global basis (project himself) because no one pays attention locally. It's kind of one of those "once you get to know him" things...

We won't mention to Larry that his instant gratification concept sure does sound like a dumbed-down philosophy ;) Jealousy? It seems that if ham radio has the "ability to permit a person to project himself globally. . ." then the internet provides the very same accomplishment without licensing requirements. Wow. What a concept.

I'm confused, Jim, and this isn't anything against you or ham
radio.....but.......

Don't they all have cop radios, fire radios and cellphones working at
ground zero? Don't the RedCross's telephones work? Doesn't Red Cross
have a comm network between HQ and their people, or direct cellphone
access??

Seems redundant.

So how is not being required to take a higher speed code test
dumbing down of the license requirements? Is the knowledge in
knowing how to send and receive faster in CW or in the knowing the
theory required to pass the written exam? Were the questions on
the exam made easier when they reduced the requirements for CW?
Pay no attention to K3LittleTurd John, Larry is just pissed
because he was forced to meet the requirements to get a ham
license.

N2EY wrote:
>
> Did you know that it was OK for passengers to bring knives and
> boxcutters onto a commercial airliner?

I did. I couldn't begin to remember all the times I've dumped my small pocketknife into the bowl along with my car keys and pocket change when going through the metal detector at the airport security station. No one ever gave it a second look. And I have given thought to the fact that just such a knife could be used by a hijacker, and if I can carry one onto a plane anyone else can also.

A boxcutter is nothing more than a small metal holder for a single edge razor blade that is designed to retract the blade into the metal handle and when it is to be used, it extends only about a half inch or so of the blade edge out of the handle for use. When retracted it wouldn't raise any suspicion whatever on the xray, nor likely if visible. The terrorists did their homework.

Here's an analysis of what we're facing, by an authority who obviously knows what he's talking about......

****

Subject: YOU are the key to Victory

Below is a letter written by a retired USAF officer who is a Military Historian and was head of the History Dept at the USAF Academy. It is not a pleasant read...in fact it is uncomfortable. Agree with it or not...it will make you "inventory" your resolve, because YOU are the key to victory more then anything else.
****

Dear friends and fellow Americans 14 September, 2001

Like everyone else in this great country, I am reeling from last week's attack on our sovereignty. But unlike some, I am not reeling from surprise.

As a career soldier and a student and teacher of military history, I have a different perspective and I think you should hear it. This war will be won or lost by the American citizens, not diplomats, politicians or soldiers. Let me briefly explain.

In spite of what the media, and even our own government is telling us, this act was not committed by a group of mentally deranged fanatics. To dismiss them as such would be among the gravest of mistakes. This attack

was committed by a ferocious, intelligent and dedicated adversary.

Don't take this the wrong way. I don't admire these men and I deplore their tactics, but I respect their capabilities. The many parallels that have been made with the Japanese attack on Pearl Harbor are apropos. Not only because it was a brilliant sneak attack against a complacent America, but also because we may well be pulling our new adversaries out of caves 30 years after we think this war is over, just like my father's generation had to do with the formidable Japanese in the years following WW II.

These men hate the United States with all of their being, and we must not underestimate the power of their moral commitment. Napoleon, perhaps the world's greatest combination of soldier and statesman, stated "the moral is to the physical as three is to one." Patton thought the Frenchman underestimated its importance and said moral conviction was five times more important in battle than physical strength. Our enemies are willing - better said anxious - to give their lives for their cause. How committed are we in America? And for how long?

In addition to demonstrating great moral conviction, the recent attack demonstrated a mastery of some of the basic fundamentals of warfare taught to most military officers worldwide, namely simplicity, security and surprise. When I first heard rumors that some of these men may have been trained at our own Air War College, it made perfect sense to me. This was not a random act of violence, and we can expect the same sort of military competence to be displayed in the battle to come.

This war will escalate, with a good portion of it happening right here in the good ol' U.S. of A. These men will not go easily into the night. They do not fear us. We must not fear them.

In spite of our overwhelming conventional strength as the world's only "superpower" (a truly silly term), we are the underdog in this fight. As you listen to the carefully scripted rhetoric designed to prepare us for the march for war, please realize that America is not equipped or seriously trained for the battle ahead. To be certain, our soldiers are much better than the enemy, and we have some excellent "counter-terrorist" organizations, but they are mostly trained for hostage rescues, airfield seizures, or the occasional "body snatch," (which may come in handy).

We will be fighting a war of annihilation, because if their early efforts are any indication, our enemy is ready and willing to die to the last man.

Eradicating the enemy will be costly and time consuming. They have already deployed their forces in as many as 20 countries, and are likely living the lives of everyday citizens. Simply put, our soldiers will be tasked with a ! search and destroy mission on multiple foreign landscapes, and the public must be patient and supportive until the

strategy and tactics can be worked out.

For the most part, our military is still in the process of redefining itself and presided over by men and women who grew up with - and were promoted because they excelled in - Cold War doctrine, strategy and tactics. This will not be linear warfare, there will be no clear "centers of gravity" to strike with high technology weapons.

Our vast technological edge will certainly be helpful, but it will not be decisive. Perhaps the perfect metaphor for the coming battle was introduced by the terrorists themselves aboard the hijacked aircraft - this will be a knife fight, and it will be won or lost by the ingenuity and will of citizens and soldiers, not by software or smart bombs. We must also be patient with our military leaders.

Unlike Americans who are eager to put this messy time behind us, our adversaries have time on their side, and they will use it. They plan to fight a battle of attrition, hoping to drag the battle out until the American public loses its will to fight. This might be difficult to believe in this euphoric time of flag waving and patriotism, but it is generally acknowledged that America lacks the stomach for a long fight. We need only look as far back as Vietnam, when North Vietnamese General Vo Nguyen Giap (also a military history teacher) defeated the United States of America without ever winning a major tactical battle.

American soldiers who marched to war cheered on by flag waving Americans in 1965 were reviled and spat upon less than three years later when they returned. Although we hope that Usama Bin Laden is no Giap, he is certain to understand and employ the concept. We can expect not only large doses of pain like the recent attacks, but! also less audacious "sand in the gears" tactics, ranging from livestock infestations to attacks at water supplies and power distribution facilities.

These attacks are designed to hit us in our "comfort zone" forcing the average American to "pay more and play less" and eventually eroding our resolve. But it can only work if we let it.

It is clear to me that the will of the American citizenry - you and I - is the center of gravity the enemy has targeted. It will be the fulcrum upon which victory or defeat will turn. He believes us to be soft, impatient, and self-centered. He may be right, but if so, we must change.

The Prussian General Carl von Clausewitz, (the most often quoted and least read military theorist in history), says that there is a "remarkable trinity of war" that is composed of the (1) will of the people,
(2) the political leadership of the government, and (3) the chance and probability that plays out on the field of battle, in that order.

Every American citizen was in the crosshairs of last Tuesday's attack, not just those that were unfortunate enough to be in the World Trade

Center or Pentagon. The will of the American people will decide this war. If we are to win, it will be because we have what it takes to persevere through a few more hits, learn from our! mistakes, improvise, and adapt. If we can do that, we will eventually prevail.

Everyone I've talked to In the past few days has shared a common frustration, saying in one form or another "I just wish I could do something!" You are already doing it. Just keep faith in America, and continue to support your President and military, and the outcome is certain. If we fail to do so, the outcome is equally certain.

~~~~~~
Security against defeat implies defensive tactics; ability
to defeat the enemy means taking the offensive.

Yes, and in the language J, an offspring of APL, 0/0 = 0.
In mathematics, 0/0 is normally considered to be undefined;
however, _if_ it is to be defined as a real number, then 0 is
definitely the best choice. (For anyone interested, there was
a thread about 0/0 = 0 very recently in alt.math .)

> > There's no

Yes, and besides your floating-point example, note that all computer
algebra systems handle certain infinities symbolically with no trouble.

> Modern floating point processors following the IEEE floating
> point standard do have special bit patterns that mean "positive
> infinity" and "negative infinity", plus "indeterminate" (also called

Maybe you meant to say that infinity less any _finite_ number is infinity.
(According to the floating-point standard, the infinities are numbers.)

> infinity+infinity is infinity, infinity-infinity is indeterminate,
> indeterminate plus anything is infinity.

No, rather NaN + x = NaN.

Finally, in response to some previous posters in this thread, note
that, of course, division of a nonzero quantity by zero is certainly
undefined _in the real number system_. But it can, for example, be

defined perfectly well as the unsigned infinity of the projective
extension of the reals.

Whoever wrote it thinks just like I do! I am sick to death of the
el-pinko, super leftist slant that has infected this country with its
politically "correct"
sh**. It does not mean that I have hate for anybody, does not mean that
I would want anybody "discriminated" against or subjected to harm, or even
words scrawled on a building. It just means "live and let live", earn my
OWN
way, stop taxing me to hand out money to welfare baby "factories", and write
the instructions in English--or, at least, where it is easier to find. The
damned
liberals with their bleeding heart mentality make me want to PUKE!!! Help
those in need--but put a time limit on it, train them for jobs, and teach
them
to stand on their own two feet, and show them that they cannot forever
"goose"
me with their collective hands in my pocket. AND send the ones with expired
visas HOME!

There is also a "theory" that some of Jesus' followers had misunderstood His message of a Kingdom on earth. They interpreted his message of peace and freedom as being liberated from the Romans in their lifetimes. There was a Jewish underground, regarded by the Romans as subversives, of which many of Jesus' followers were members. Jesus preached of the liberation of the soul and peace in peoples' hearts. When there seemed to be no movement in the direction of liberation from the Roman Empire, certain ones, including Judas,
plotted against him to precipitate a crisis--one that would force Jesus to either
perform a miracle and escape (after all, many of them had seen him perform healings and other wondrous things), or be exposed as a fake who could not, or would not, produce the result they mistakenly thought he was promoting thru his preaching. Being that the Romans regarded him as a subversive as well, it was not hard to convince them that he needed taking out. Still, as was pointed out, Pontius Pilate had no evidence that he had actually done anything wrong. Perhaps he actually understood that His message of liberation
was, indeed, of the soul? But, if he did not yield to the wishes of the people
whose minds had been poisoned by the misguided underground (They went around whispering to the community in order to drum up support for their agenda to force Jesus' hand), then he would have a huge disturbance on his hands. Thus, the "trial" and crucifixion. Thus, this particular theory goes.

All excellent advice! Allow me to add a few more items:

5. The most you will have to do to upgrade to General is to pass new Element 3, a 35 question written test. Upgrading to Extra requires the General plus new Element 4, a 50 question written test.

6. Practice exams and the entire Q&A pool are available at various websites for free.

7. The VE fee entitles you to one try at each test element, pass or fail.

I think there is much confusion about the difference between
a "right" and a "privilege" in our society.

For example, we have a constitutional *right* to freedom of
travel within our country.

Until 09/11/01 we had the *privilege* to check our baggage
at curbside. That *privilege* no longer exists, but our
right of freedom to travel has not been affected. It's
just not quite so convenient as it once was.

With all kinds wishes,

de Hans, K0HB

Source record: 20767

1. Amateur Radio is NOT an "academic" activity?????
I submit to you, Lenny, that "academic" refers to learning. When I started
out in radio I knew nothing--not even a transistor from a resistor. Over the
years, particularly AFTER I joined the ham ranks, my knowledge doubled
and redoubled. I can now do minor servicing on my own equipment, recog-
nize problems, understand antenna theory. I even market my own version of
the popular screwdriver antenna. I am NOT an electronics engineer. It is
still a hobby, after all. But IF I have LEARNED something in my pursuit of
this hobby, then ham radio is, indeed, academic endeavor. If it still existed,
I could show you the Advanced test I took a number of years ago.

2. Health and Welfare traffic and activities ARE emergency traffic. After all,
it is usually an emergency that causes such traffic to be generated. If Ama-
teur Radio is being used for such as a result of same, then the traffic IS emer-
gency traffic. When Amateur Radio is being used to coordinate the move-
ment of personnel, supplies, food, surveying damage, it IS emergency traffic.
Amateurs are often tasked with more than just jabbering on a radio, Lenny,
and all you gotta do is talk to most local EM's to discover this fact. In ham
radio, messages are assigned precedence--just like in other services. Ama-
teur Radio is often used to take pressure off OTHER "professional"--as if
there were a distinction during an emergency---communications services,
relieving less urgent , but essential, traffic and keeping circuits open for the
"hot" (PRIORITY) stuff.

3. IF Amateur Radio is so "irrelevant", why are Amateurs accorded a seat in
state and local EOC's? Hmmmmm, Lenny? Why don't they call on the
"freebanders", the "10-4, Mercy Me Boys? One of the funniest things I
heard/read was a CB outlaw stating that, "Waal. we din' git no E-mergencee
traffic, but we wuz a-standin' by on 27.580 so them guv'mint boys cud

pass
that 'ere traffic. (What they didn't know was, the "traffic" was being
handled
by SHARES, FBI, FEMA, MARS, CAP, AND AMATEUR)

'Nuff said~!

I don't think I have any misconception about what a right and a privilege are. What concerns me is the privileges that may be taken away through methods which may jeopardize our rights.

An example:

I have the right to free speech and expression.

It is a privilege that I can do both without the intervention of surveillance.

My right may be in jeopardy if my privilege is suspended and it is decided that what I am saying or expressing is "not acceptable."

I don't have a problem with the concept of anyone listening to my phone conversations or scanning my personal emails. What bothers me about it is: who is making the decisions about whay I say or express being "unacceptable" and what do they intend to do about it?

Perhaps you can enlighten me, Dick? Whether by voice over a ham radio, or production of a website, or participation on a newsgroup, or whatever on the internet...the basis is the "ability to permit a person to project himself globally." What is about the ability to do that through either medium that you contest?

Dick:

Do you have the source of this letter? Asking because I wish to send it on, but don't like to send things that aren't referenced. While I may not agree with everything that is written, it is certainly something we must begin to deal with.

The police/fire/emt frequencies are being utilized for recovery ops at the WTC site as well as normal day to day activities (after all NYC IS the city that never sleeps)

At this moment..cellphone usage is spotty at best in the lower part of the battery (as that part of NYC is called) and phone service there is non existent. Verizon anticipated "normal" phone service toward the end of October for that part of NYC. The vast majority of cellphone antenna sites were on the WTC (covering almost all of lower Manhattan and a good portion of Brooklyn, Staten Island and NJ)

The comms between the Red Cross, the various shelters and surrounding areas is being handled by ham radio into Red Cross HQ's in both Bergen and Hudson Counties in NJ. This way valuable communications frequencies are not tied up with requests for shelter supplies, reports, etc

Yeah, sure. Try calling the Red Cross on the phone, just like every family member of all 7000 people who died. They'll put you right through so you can get immediate answers to all your questions. No problem. The person who answers the phone has all the answers at their finger tips without any help from anybody. Family members are now dealing with the need for death certificates for their loved ones who perished. Try and get real, Larry.

My (patent-pending) solution to the airliner-hijacking dilemma
is based on the tried-and-true technology of the Cold War --
Mutual Assured Destruction (MAD). Each passenger would be
issued a Glock .41 caliber handgun (the kind that makes big holes)
and several clips of ammo. The stewardesses would instruct
the passengers in the mechanics of operating the handguns
much like they do for seatbelts and oxygen masks. They would
also assure the passengers that each of them now has the
means to attempt to take over the aircraft by force. They
would also point out that if anyone tried that, the attempt
would be met with a rapidly escalating counterforce that
would ultimately destroy the aircraft and doom them all. And
they would wish them a happy flight.

Then there's my other solution -- the "Con Air" approach.

The best way would be to have a "hijack" mode on the cabin pressurization system that would allow the pilots to instantly depressurize the cabin without deploying the passenger oxygen masks.

That way they could incapacitate them without killing them. It may be very dangerous to older pax or to people with respiratory disorders, but that's a risk to be faced.

Every ham who puts up an antenna is an "RF Designer" and
should be able to use the Smith chart, at least conceptually.

99.99% works out to 1 in 10,000. The prevalence of 5 speed manual transmissions
is a lot more than that!

>Did you always own a car with a 5-speed gear box?

Nope. I've had 4 speed transmissions, too. 5 speed boxes are relatively new -
they weren't common before 1980 or so.

>When you first
>took the drivers test, which you were forced to do if you wanted a
>drivers license, did you take it in a car with a 5-speed gearbox?

Nope. A 4-speed.

The popularity of manual transmissions continues, even though almost all cars
are available with automatics.

Come on Steve, Lennie IS the biggest penis around. Heck, around here we refer to him as one of the biggest DICK's on the NG :-) No offense to the other Dick's.

In fact, I have it on good authority that for Christmas last year, Lennie's wife bought him a giant body condom, with the card inscription..My Dearest Leonard, if you are going to act like a prick, I though you should dress like one. ha ha ha very funny stuff

BTW, Putz IS NOT yiddish for anus and LHA would have led many to believe.

Schmuck is yiddish for anus, putz is yiddish for penis

To Len I say

You're a Nukshleper and a Moyshe Pupik You are at best Shvuntz and a Alter kakher. You haven't the slightest clue about Mame-loshin .

Ver derharget, A broch tsu dayn lebn, Ech hob dir in drerd

You are truly a putz and a schmuck

Remember Anderson, Goyim like you should never try to use words they haven't an understanding of..

How 'bout some kind of gas that would bring on sleep? Steve, is there such a gas that could be pretty effective and be of little medical harm to anyone (infants, respiratory, elderly, etc.)? The pilots could seclude themselves from such gas and cause it to disburse at the first sign of trouble.

>(infants, respiratory, elderly, etc.)?

Any sleep-inducing gas or agent has the risks of anaphylaxis. Assuming
that there is no way to permit "some" of the cabin crew to remain alert (access
to clean oxygen could be subverted by hijackers), there'd be no one able to
respond to the event. A sleep agent would, however, allow for a constant
supply of oxygen, even though it was inducing sleep.

It's a lose-lose situation. I wouldn't want to be the guy in the left
front seat and have to make the call.........

Why? I know how to calculate the length of an antenna, put it up
and trim it for best swr without ever seeing a Smith chart. In
fact, I have installed a lot of antennas and can count on one hand
with fingers left over the times I have ever seen a Smith chart,
much less used one.

The PERLs, opinions, and interrupts are all disgusting and wet. What will you roll the retarded offensive robots before Tamara does? Some cryptographers interface, post, and generate. Who deletes superbly, when Ella vexates the junk ADSL without the haven? Bernice rigidly disconnects robust and spools our surreptitious, clear discs over a data center. Morris will wash the sharp analyst and load it in its contact. Her thought was cosmetic, fast, and compiles in front of the mailbox. If you'll disrupt Norma's news server with laptops, it'll gently defeat the client. Do not transport a printer! Woodrow doesn't flow fake iterations, do you tolerate them? Nowadays, go prioritize a president!

My advice is to try for the whole enchallada (extra) while you are at
the VE session. As described above, that's what I did. Then about
$800 later for a used HF rig (TS440SAT with month guarentee from
HRO in Sunnyvale) got on HF and found that HF is fun. I've
been neglecting VHF lately, though.

Look for some links to such at my links page at:
http://www.geocities.com/CapeCanaveral/9178/linkrad.htm
and schroll down about 4 "paragraphs" for these links.

>
>
> 7. The VE fee entitles you to one try at each test element, pass or fail.

But you have to pass the lower levels before you can take the higher levels. You can't take Extra written without passing general.

That is, IMO, a rather ridiculous assertion. I know of no reason to

learn the Smith Chart unless one intends to use it.

And how is that, oh Guru? When you have one and only one place to put an antenna, what is the Smith Chart going to tell you that you really want to know? When the antenna resonates short and your SWR is about 1.7 you have just sucessfully created a roofing-nail heater. Doesn't take a chart to tell me that a folded dipole with a 90 ohm Q section will work a lot better. Educate me.

Come on Steve, Lennie IS the biggest penis around. Heck, around here we refer to him as one of the biggest DICK's on the NG :-) No offense to the other Dick's.

In fact, I have it on good authority that for Christmas last year, Lennie's wife bought him a giant body condom, with the card inscription..My Dearest Leonard, if you are going to act like a prick, I though you should dress like one. ha ha ha very funny stuff

BTW, Putz IS NOT yiddish for anus and LHA would have led many to believe.

Schmuck is yiddish for anus, putz is yiddish for penis

To Len I say

You're a Nukshleper and a Moyshe Pupik You are at best Shvuntz and a Alter kakher. You haven't the slightest clue about Mame-loshin .

Ver derharget, A broch tsu dayn lebn, Ech hob dir in drerd

You are truly a putz and a schmuck

Remember Anderson, Goyim like you should never try to use words they haven't an understanding of..

Translations upon request

No, I got it from someone whose integrity is beyond question (in his owrking days he had Top Secret and Crypto clearances and worked for "one of those" agencies). I didn't ask him for the source and see no need to -there is nothing within it that is in any way questionable, to it is one man's learned opinions. I doubt it'd be difficult to confirm the source with a little effort on the net.

Asking because I wish to send it on,

Don't know about the rest of the country, but for awhile, everyone

was required to pass their driver's exam using a stick shift in
Texas. No automatic transmissions were allowed for the test for a
number of years. I was required to pass my driver's test using a
stick shift. People whose cars had automatic transmissions were
required to borrow a stick shift car from someone. Maybe your state
was different?

Smith Chart knowledge is required on the Extra exam just like
Morse code skill. Why would lack of skill in Morse code prove
dumbing-down while lack of knowledge in Smith Charts is OK?

Cecil do you realize how dumb that statement is? When he is unable to make an antenna work properly without the use of a Smith chart, you will be right. That will be never. It clearly is not necessary to use a Smith chart unless you wish to thoroughly understand every aspect ot feedline and antenna matching. It is, on the other hand, impossible to work manual CW without learning the Morse code.

Any question related to the Smith chart that is required knowledge to correctly answer ALL extra class questions can be memorized without actually knowing the Chart in detail. Of course, you would have Morse code reduced to just such a scenario on the test. But that connoteno more working knowledge of CW than the test does knowledge of the Smith Chart. Result = Dumbed Doen.

Well Larry, you have to give Kim *some* credit. At least she recognizes
that *something* is there, she just has no idea what it is, so she takes
a stab at identifying it.

Who cares about Smith Chart, you dont have to know anything about it to pass
the present test, so you miss a couple Questions, no big deal.

Smith Charts are as big a deal to me as Morse code is to Larry.
One cannot be a real ham unless one understands Smith Charts.
Larry is obviously not a real ham.

You really ARE stupid, aren't you? Surprise, surprise! Technology will solve all problems, all the time! Yeah, Right!

There ARE GOING TO BE manual transmissions in motor vehicles, probably for as long as there are motor vehicles on highways. People who are knowledgable in the process of driving both automatic AND manual transmissions are simply more qualified and better informed than the "dumbed down" sorts who have everything done for them.

If you can't understand that, it's your problem, not mine.

>

Show me one. I mean a real one, not some local toy. It doesn't exist
and never will, on any useful scale. It all goes to a hardwired or fiber
network VERY soon in the process.
I know, you're certain the advance of technology will change all that.
No limit, Right? Wrong. Everything has a limit.

> boxcutters onto a commercial airliner?

A young fellow who I am close to is a badge carrying, gun toting
Federal officer. When he flies he goes armed, just as he doea everywhere
else. When I flew with him he checked in with the airport security and
the airline staffs, and on the plane the flight attendants knew who he
was, where he was seated, and that he was armed.

I've thought about how the Sept 11 outcomes might have been diffeent had he, or others similarly situated, been on those hijacked planes. A boxcutter/razor blade or plastic knife wouldn't have been much of a match for his 10mm Glock and his marksmansnhip. And I'm rather sure he could have done it without peforating the plane's skin.

Bill, I'll readily admit that you're right about that. However, by the grace of God, we've never experienced the kind of global disaster which could disrupt communications on such

a widespread scale as to present a situation where the ability to fall back on CW was tested. However, when the time comes, and knowing CW would really be quite handy, what is the typical Post-Restructuring ham going to do?

>
>You didn't answer the question... WHY, if there is no
>license requirement to know how to use a manual gearbox,
>do we still see NEW drivers that DO learn and enjoy using
>manual gearbox autos?

Bill:

An even better question would be, why don't we see more than there are? Automobiles with manual gearboxes probably represent less than 5% of the cars on the road today. Most people opt for the convenience of an automatic transmission -- and on some types of vehicles, such as the Paratransit busses and vans I drive for a living, they simply make more sense. And, to answer the question posed by a previous poster, I owned several cars with automatic transmissions, but on each of them, I've had to endure costly repairs to the transmission. I've never spent a penny on any manual transmission I've ever owned -- not so much as a clutch replacement, and this covers the better part of a half-million miles of driving. Manual gearboxes are simply more reliable in the hands of a proficient driver. Automatics are more popular because they require less effort (or so it seems to those who aren't adapted to a stick). Driving my 5-speed is second nature; I don't think about what I'm doing, I just do it. It also makes me a better driver, because I can't yak on a cell phone, eat a slice of pizza, or smoke cigarettes while driving...as do most of the maniacs I share the roads with.

I can enjoy the benefits of a manual gearbox because I once HAD to learn how to drive one, in order to drive my grandpa's old work van when I worked as his summertime helper. One day, he said, "You've got your license, you drive." So, I sat behind the wheel, and played with the shift lever, trying to find first gear. He got a big kick out of that! In three hours, I was driving that old '65 Ford Econoline with 3-on-the-tree just as good as he ever could! I've been hooked on manual gearboxes ever since!

No, Bill, drivers aren't required to know how to drive a stick shift in order to get a license anymore. However, someday, they may find themselves "forced by circumstances" to do so...then where will they be? Perhaps a stick-shift driving test isn't such a bad idea, after all!

Kim:

Precisely. Dumbed-down hams (such as yourself) are more interested
in activities which award instant gratification than they are in making
a dedicated effort to learn and master the most practical, effective,
efficient, and universal mode in ham radio -- Morse/CW!

>Jealousy? It seems that if ham
>radio has the "ability to permit a person to project himself globally. . ."
>then the internet provides the very same accomplishment without licensing
>requirements. Wow. What a concept.

Right again! And you would do well to take full advantage of it,
since any other activity requiring a serious, dedicated effort on
your part is apparently out of the question!

Now, just why is that question not legitimate? You will be surprised how many amateur licensees are actually out-of-touch. As a volunteer examination team, our group is STILL seeing some "no test upgrades" (although only a handful; not the scores that would have hit in April or May of 2000).

Granted, the person making the query is uninformed, but that does not make his question improper in itself.

> If you can't understand that, it's your problem, not mine.

Dick,
Your statement that: "People who are
knowledgable in the process of driving both automatic AND manual
transmissions are simply more qualified and better informed than the
"dumbed down" sorts who have everything done for them." is both
arrogant and deaming towards anyone that decides NOT to learn
a particular subject area or skill. Consider that your thoughtless
statement could equallybe made as follows:
"People who are
knowledgable in the process of archery AND automatic weopons
are simply more qualified and better informed than the
"dumbed down" sorts who have everything done for them (in
the field of weopanry).

As to manual gearboxes, there simply is NO reason for the vast
majority (over 90%) of drivers to learn the skill or ever need it.
That you describe those that don't as "the dumbed down sorts who
have everything done for them" is pathetic. There are thousands of
skills and tasks that I totally rely on others to do...or that I have
NO need to learn because there is only a finite amount of time

in my life. Each person is free to make those decisions as they see fit. Your "dumbed down" label applied to those that decide to NOT learn something YOU think is of value is, as I stated, is pathetic.

Why not provide us all with your LIST of those things that everyone must know...according to you....to avoid your label of "dumbed down sorts who have everything done for them?"

>> In other words, exactly how far are you willing to carry
>> your irrational thought patterns?
>
> I'll gladly leave it to the readership to decide who is is irrational
>here.

Dick, Happy to participate in that effort...you got my vote as the irrational contributor.

Cheers,
Bill K2UNK

EXACTLY. The decision to own/drive a manual gearbox vehicle
today is strictly a personal preference. There is literally
NO reason of consequence other than personal preference
that has lead to only about 5% of new vehicles being bought
with manual gearboxes.

>And, to answer
>the question posed by a previous poster, I owned several cars

>of the maniacs I share the roads with.

Today's automatic transmissions are equally reliable. As to never
needing
a new clutch in any of your manual gearbox cars, I find that hard
to believe unless you never drove your vehicles more than
100K miles. The need for clutch replacement has much to do
with the type of driving/use any particular car is put to.

>I can enjoy the benefits of a manual gearbox because I once HAD

In other words, circumstances in your life lead to your NEED
to learn.

>No, Bill, drivers aren't required to know how to drive a stick shift
>in order to get a license anymore. However, someday, they may
>find themselves "forced by circumstances" to do so...then where
>will they be?

Such as?
Sounds as improbable as the "forced by circumstances"
need for a CW use during an emergency.

>Perhaps a stick-shift driving test isn't such a bad
>idea, after all!

It is over 40 or 50 years that such a requirement has been in
place and there has been ZERO call to ever go back. As an
idea it is totally without merit or even a single incident that
could serve as a reason to do so.

Cheers,
Bill K2UNK

My first car was a 1950 Ford, 3 speed on the column. I also once
had a SIMCA (a French abomination :-) which had a 4 speed on
the column.

>>When you first
>>took the drivers test, which you were forced to do if you wanted a
>>drivers license, did you take it in a car with a 5-speed gearbox?
>
>Nope. A 4-speed.

I took my test using an automatic...BECAUSE why would I want
to be tested on a manual which would only add other factors
that could lead to not passing the test. That has been true
for each of my three kids also...even though as soon as they
had their license they only had access to manual gearbox
cars. Once passed, the drivers license gives NO special
recognition and/or additional privileges just because the person took
the test on a manual gearbox instead of an auto.

>The popularity of manual transmissions continues, even though almost all cars
>are available with automatics.

Agreed!

And the popularity continues even though not a single
driver is mandated by licensing requirements to ever learn
how to use a manual gearbox.

I don't know for certain if that was true. It is true today in
all 50 states, but there have been claims by some people that
in the past (probably in the 40s/50s) that some states had
a distinction in the license if a person didn't take the test
on a manual gearbox vehicle.

Again, I have never been able to find any actual historic
evidence that it was so, but some people have claimed it was.

Having worked 2 disasters with the Red Cross this year Houston flooding from TS Allison, and the flooding in WV, I can tell you first hand that the cell phones and comm networks are overused, and not always reliable. In WV we sorely needed amateur radio operators to relay traffic from headquarters to the various shelters, kitchens, service centers. We had ONE ham operator for all of Wyoming County, cell phones were useless there. I am sure that in NY the cell systems were jammed, as is always the case after a major disaster, that is why radio communications are vital.

Larry,
What the hell difference does it make in what ANY individual
ham is interested in or what their personal motivation is as
long as it is ham radio? Your beef is that many hams just don't
subscribe to YOUR personally defined list of what is important
in ham radio.

>>Jealousy? It seems that if ham
>>radio has the "ability to permit a person to project himself globally. . ."
>>then the internet provides the very same accomplishment without licensing
>>requirements. Wow. What a concept.
>
>Right again! And you would do well to take full advantage of it,
>since any other activity requiring a serious, dedicated effort on
>your part is apparently out of the question!

That's a pretty broad accusation to make based only on past
"ham radio only" discussions with Kim. Do you apply the same
accusation to ALL hams that advocate no need for a CW test
or who have decided to not use CW even though they passed
a CW test?

Cheers,
Bill K2UNK

Well as I said in another thread, Hams are needed in times of disaster,
cell phone systems and regular phone systems become quickly overloaded.
the tunked radio systems are only for police.fire/rescue to use, the
other agencies who are also doing important work need communications as
well, thats why the ARRL has a MOU with the Red Cross. The Red Cross
needs radio operators to man the radios at the EOC, ICP, Red Cross
headquarters, shelters, kitchens, service centers, and other facilities.
In Houston and WV DR's that I worked at, we sorely needed radio
operators.

sir this is war and you had better know that right now.......and the
suggestion mentioned is a good one in my opinion..........dead
families do not produce offspring capable of revenge.........and in my
opinion, most of the people here from the middle east, who somehow
have gotten into this country, should be examined to see if they
entered illegally and if so deported........all of them...........this
is a war of cultures.....they believe one way, we believe
another......this is not a moslem nation.......they are using our
freedoms to operate their little terror cells.......actually all of
this would not have happened if we had a decent immigration policy and
the ins was doing its job........maybe now , we will have one, and
they will be more efficient doing their jobs......a lot is at
stake........did somebody say something about borders , language and
culture.???????

>> Remember New York
>>
>> 73, Rick

Whoever wrote this is one sick puppy. We have absolutely no need to "bayonet" any babies, kill off the innocent family members of terrorists, or anything of the sort. I would expect our military responses to be targeted specifically at the command and control infrastructure of terrorist groups, specific terrorists and their supporters, and any and all associated personnel and property. There should be a significant of terrorist group leaders captured alive for the purpose of being "influenced" to provide information necessary to defeat their organizations and other terrorist groups, and then stand trial in a US-led International tribunal designed to bring the leaders of terrorist organizations to justice. This must be an ongoing process, open-ended in it's prosecution of terrorist activity wherever and whenever it shows it's ugly head.

The goal is to ensure the safety of innocent peoples of the world by abolishing the very concept of global terrorism. This can only be done by making it absolutely clear that any and all terrorist activity will evoke an immediate and devastating response against it's perpetrators. Considering the fact that the threat of terrorism now includes weapons of mass destruction, such as nuclear, chemical, and biological weapons, it is imperitive that the very underpinnings of global terrorist organizations be infiltrated, undermined, and ultimately destroyed. Proportional responses are not a virtue in this struggle, but it is not necessary to deliberately and indiscriminately destroy human life in the same manner as was visited on the United States on Sept. 11. We are Americans, We are better than that. Surely, there will be some colateral damage in our campaign against terrorism, but this is always true in any struggle of good against evil. In order to prevent this from happening, hopefully the good will assist us in locating the evil, and bringing them to justice -- or bringing justice to them!

You must not know how to drive an automatic or you pick poor
choices of cars. I have owned a number of cars with automatic
transmission and
I've never spent a a penny on transmission repairs. One car I
currently own has over 250,000 miles and the automatic
transmission has never been touch except for the occasional fluid
and filter change.

Just what circumstances can one possibly envision where millions
of drivers might find themselves forced to operate a standard
shift? Maybe an isolated case or two. Same old argument you claim
for the use of CW, with today's technology there will never be the
case where some hams are going to save the world by using CW
because that is the only thing that works. With the millions of
vehicles with automatic transmissions there will never be a case
where drivers will only be able to drive if they know how to use a
stick shift.

Paleface, you make a good point, quite by accident I'm sure. If you are of Asian, African, or European descent, pack your bags and head on out. The original cultures and languages here had names like Algonquin, Souix, Cree, Hopi, and Cherokee.

With all kind wishes,

Yep, I can read history, too. The difference is that I understand the limits of Gung-Ho. If systems always worked as they were designed, the Sept 11 attacks would have never been allowed to happen. It's always the human element that causes failures, and those failures are mostly lack of adequate understanding, planning or breadth of view. And reliance on technology that works *most* of the time.

So do you think manual transmission operation should be covered on

a driver's exam? I don't know of any state that still does that.
Why does it matter whether someone knows how to use a manual shift
if they never drive a manual shift?

Yep, you're right.....just read the terrorist training manuals and you clearly see that their goal is to eradicate the USA and everyone in it, to the very best of their ability. Just what do you think we should do about that?

> Which would make us just as bad as those
> that attacked us.

That may be your opinion but I can verify that it is not universally shared. I would rather my grandkids grew into freedom loving adults than for theirs to grow into rabid terrorists who vow death to everything they see as foreign. You must remember who started this little fracas.

I have in the past. I don't any more. Shifting interferes

with hamming. I remember when stick shifts were low class
and all the high class people drove automatics.

Knowing how to use a manual transmission does NOT smarten
anyone up nor does not knowing dumb anyone down.

What if I said you are extremely dumbed down because you
don't know how to use a Smith Chart?

Bill, I'm not the least bit surprised that you would say that. After all, you believe that hams who never learned CW are as qualified as communicators as those who did. Very Revealing.

> Consider that your thoughtless
> statement could equallybe made as follows:
> "People who are

And that statement is not only exactly correct, it displays your ignorance of
weaponry and its many uses. There are times when a good crossbow is far preferable to an AK47 or M16. Try taking out a lone sentry in the middle of the night without waking the entire compound with a machine gun.

> As to manual gearboxes, there simply is NO reason for the vast
> majority (over 90%) of drivers to learn the skill or ever need it.

Now you're making a little sense, in your oblique way. Of course there is no reason for the vast majority of people to ever learn CW, either. But the vast majority of people will never become ham radio operators either, with the attendant presumed interest in the passing of radio communications under the most stark circumstances imaginable. At least, that is MY interest in ham radio, at the bottom line. It is tragic that so many of you today just want to do a bit of yakking under normal conditions, and truly believe that nothing more could ever be demanded of you nor your ham radio station.

Actually, I said hams can learn all they need to know *after* they
get their licenses. That would include RF design *and* Morse code.
The goals of the ARS do not stop when someone gets a license.
My statement above still stands.

Let's put it in real context. Someday, Larry may be required to perform emergency surgery on someone to save their life. Has he taken all the necessary courses for this? Does he have any experience in surgery? Could he do the task and save the life? I mean, after all, if "preparedness" is going to become the measurement of one's worth--then we're all damned dumbed down.

Actually, the oldest North American human fossils
(recently discovered) are of *European* stock.
Unfortunately, the law says those fossils must
be handed over to the "Native Americans".

Jerry,

Thanks for you excellent explanation. I was trying to convey that idea in my post, but you did a much better job.

I always wondered how Judas could betray Jesus if he had actually seen any of Jesus' healings and other works. Judas probably noticed that Jesus did not often perform miracles on His own "initiative". Instead, it usually took a specific request from someone who believed in Jesus, (wedding at Cana, centurion with the sick servant, the man blind from birth) or an unusual situation (loaves and fishes). Judas may have thought that by setting up a "situation", the high priests would be convinced.

Indeed, the story says Peter cut off a servant's ear with a sword when Jesus was being arrested, but that Jesus healed the ear and told Peter to put his sword away.

I have all of my old licenses back to my first Extra (1970). I hope to someday find my old 1967 Novice.

>And on the big day cashed in those
>CSCE's and the old tech ticket for my Extra Lite :-).

Cool! But I'll bet it just says "Extra" on your license, just like mine. ;-)

>> >2. You are out of the code test business. The license will get the
>credit.

Yup. But there are some odd catches here:

If a person has a current amateur license, or one that expired less than 2 years ago, of any class except Technician, they get credit for Element 1 automatically.

If a person can show that they once held a Novice class license, they get credit for Element 1 automatically, even if they currently hold no amateur license of any class and are beyond the 2 year "grace period". But this special credit does NOT apply to any other license previously held!

If a person with a Technician passes Element 1, (but no other elements) they get Novice/Tech Plus HF privileges and a CSCE for Element 1. This status is informally called "Tech with HF". The Novice/Tech Plus HF privileges last as long as they keep their license current, but the CSCE runs out in 365 days. A "Tech with HF" who waits more than 365 days to upgrade will have to pass Element 1 again.

So we can have the odd situation where a person who passed Element 1 and has a Technician license 366 days ago has to be retested on code, but a person who held a Novice license decades ago and has been out fo ham radio for 30-40-50 years gets automatic credit for the same test.

Not my rules - the FCC's. Go figure.

Good point! Main thing is to try all of the ones you can while you're there.
You never know - often a new ham knows more than he/she gives themselves credit
for. I became an "Accidental Advanced" just that way.

> communicators as those who did. Very Revealing.

They can be less, equally, or more qualified than hams who learned
CW in every mode except CW. There is no correlation in qualifications
and the CW mode. That's what the FCC said. The only correlation of CW
skill is to CW skill. Someone who knows CW can still be an absolutely
lousy ham operator.

> But the vast majority of people will never become ham radio operators
> either, with the attendant presumed interest in the passing of radio
> communications under the most stark circumstances imaginable. At least,
> that is MY interest in ham radio, at the bottom line.

So the truth leaks out. It is ***YOUR*** interest that matters,
not the interest of other hams and not the interest of the FCC.
Now tell us something that we didn't already know.

>What is the binary expression for infinity?

According to IEEE Standard 754-1985 (for floating point) the 32 bit value is

s11111111000000000000000000000000

where `s' is 0 for +infinity and 1 for -infinity. See, for example,
the formats section in

http://www.arlut.utexas.edu/SunCompiler/common/ug/ncg_math.doc.html

Not that it matters much, but you did ask...

>> Any expression of "0 / 0" is still zero. :-)
>
>Nope. It's an undefined expression.

I think the IEEE standard thinks so too. I think the result of 0/0 is
is NaN (Not a Number), which has a 32 bit binary format of

01111111110000000000000000000000

This is the computer equivalent of "I don't know".

Hams who have never learned CW are every bit as qualified as any other communicator in their class of license. Hams who have learned CW to pass their test for higher classes of licenses are every bit as qualified as those of equal license class. It's as simple as that and most of us read nothing more into the license structure, Dick. It is my firm belief that only those who seek some sort of worth cling to the idea that knowing CW above the standards set forth by the FCC merits a higher respect from other hams. I do not believe that. The majority of hams do not believe that. The good thing about it is that it makes the majority of ham radio a darned good hobby to be involved with--with a few bad apples among us. The pitiful thing is that those who are seeking worth probably have it, and make themselves look like darned desperate people.

Actually 0/0 can be anything depending on how you got there. Noting
that

sin(y) -> y as y -> 0

then when x is 0

sin(x) / x

(i.e. 0/0) is 1, but

sin(2x) / x

is 2,

(sin(2x) * sin(2x)) / x

is 0 and

sin(2x) / (x * x)

is infinity. The fact that 0/0 can be anything is why the operation
is called "undefined" (0/0 gives you insufficient information to
determine the result). 1/0 is not undefined, however, it is infinity.
(infinity * 0), which could be ((1/0) * 0) = ((0 * 1) / 0) = (0/0),
is undefined. All of this has a lovely consistency.

heh I am not planning to fail, heck I just took the practice general
exam online here are the test results.

Results:
You scored 32 correct answers and 3 incorrect answers from a total
of 35.

You would have passed the exam! Congratulations!

my only worry is the code itself, and I am working on that too, besides
withing with different code learning programs and the pocket trainer, I
am also tuning into the bands on my SW reciever and listening to the
code there, trying to get the feel for the "rythem"

he would have to have ALOT of pull to remove my access, seeing as i
helped start my ISP in the first place, and know ISP admins on a first
name basis all over the country as well as other countries.

reminds me of the wannabe that told me he was donna hack me last night.
I laughed in his face, right before I banned him from the Undernet IRC
network and mailed his ISP, who then pulled his account.

Not the first time they tried to cross up Jesus. Some people once asked
Jesus if they should pay tax to the Romans. He came back with a good
one: "Show Me the coins you use to pay the tax. Who's picture is
on those coins? Well, give to Ceaser what is Ceaser's, but give God
what is God's".

Use silver bullets like the Lone Ranger. He was the proud owner of two .45
calibre single-action shotguns. Works jake if you can persuade the shootee
to let you insert it in his nostril.

well that is not what he said, but let me ask you this. why is it the
child is being talked to in spanish....???? because the know-it-all
educational and political establishment are striving for their
precious diversity and where is that going ....???? well i will tell
you.......one day, there may not be a solid one nation under God
principle working here, because without one language one culture and
one border, then what are we???????

>to believe unless you never drove your vehicles more than
>100K miles. The need for clutch replacement has much to do
>with the type of driving/use any particular car is put to.

It also depends on the type of car and how well the clutch was engineered.

Personal experience: In February 1980 I bought a new VW Rabbit with 4 speed manual transmission. This car was used for mostly stop-and-go city driving in an area with lots of hills - the worst possible environment for a clutch.

After 10 years and 104,000 miles the engine and transmission were swapped out as a unit because I got a deal on a used-but-good remanufactured engine with trans attached.

The original clutch was still in use when the swap was made. The car lasted 7 more years after that, and was retired only because the body rust was getting too bad.

I removed the old factory-original clutch to see what 104,000 miles of wear looked like. It still had plenty of lining left, and had displayed no tendency to slip or grab throughout its life. The release plate and flywheel looked perfect. I would not be surprised if it would have gone another 104,000 miles.

The replacement power assembly (engine/clutch/trans) had 97K miles on it when the car was traded in, and that clutch was still doing fine - no slipping, no grabbing, no problems.

So at least one company knows how to make clutches that last.

Was there a point you wanted to make? It is generally
held that the remains of your ancestors belong to you,
not to some academic wuss with a bad comb-over and a
government "culture studies" grant.

With all kind wishes,

de Hans, K0HB

>communications under the most stark circumstances imaginable.

Let me be far more specific then... there simply is NO reason for
the vast majority of hams to ever learn CW. Indeed, not one
arguement to sustain code requirements seems to have been
of any convincing to the FCC and the international community.

>At least,
>that is MY interest in ham radio, at the bottom line. It is tragic that
>so many of you today just want to do a bit of yakking under normal
>conditions, and truly believe that nothing more could ever be demanded
>of you nor your ham radio station.

Who are you to demand anything of me or any other ham.
If you so fervantly believe in the merits and use of code, then
do your homework and gain the new users by example and marketing...
not by mandating every new HF ham learn CW on the chance that
by doing so you'll gain some percent of those new hams that like
CW.

Cheers,
Bill K2UNK

>

The most definitive answer will come from your local VEs. The 5wpm change makes things a bit different than my VE days. A lot depends on how the tests are organized; scheduling is more the problem than legalities.

Because you can obtain certs for all elements, the writtens should be given in sequence so you should be able to take 2,3, and 4 until you fail one. The code test is an add-on given somewhere along the line. So you should be able to do what you have in mind.

What may cause a problem is that it requires three Extra VEs to give Extra exams but lower classes may be given by three lower license grades. So what you may encounter in large sessions is separate sub-sessions in different places administering say, Element 2 writtens only.

A one-location session might begin with those taking the code at 8AM followed by the written elements beginning at 8:30 or nine.

Were I contemplating what you have in mind, I would sign up for the whole enchilada unless you haven't started code practice and let them throw me out. Same price.

As this is something of a goofball, you should out of courtesy get with the VEs as soon as possible to keep everyone's blood pressure somewhere near normal but there is no good reason you can't do it.

BTW download Morse Academy from http://ah0a.org, follow directions and buy a set of headphones before your family assasinates you to stop the infernal beeping.

Yup. Of course He knew that anything He said that was the least bit threatening
to the Romans would be jumped on as insurrection really fast.

There was also a time when He healed someone on the sabbath, and there was some
rumbling about His "working on the Lord's day". He asked who of them, if his
donkey fell into a pit on the sabbath, would not work to rescue it?

Yep, it appears now that the first settlers in North
America came from Europe and the later immigrants
from Asia killed them off.

>The US has never had one language and one culture. Why do
>you want to change things that have worked for 200+ years?

The problem is it hasn't worked as WELL as it should have.

The basic problem in the world, other than hunger, is ignorance.
Unfortunately, with literally hundreds of languages and/or dialects of various
languages it is almost impossible to overcome that.

Let a Hispanic mom talk to her kids in her native tongue at home, but
anyone who emigrates to the United States should be obligated to speak at least
conversational English within 2 years. School children should speak nothing
BUT English (save those in classes for other languages, and only IN those
classes...)

In those areas of America where we solicit foreigners (ie tourist areas,
business complexes, etc) I say heck yes, have every accomodation for THIER
language. Afterall we WANT them to come and spend thier money or invest here.

But if you ELECT to LIVE here, by golly you should be a part of THIS
culture. Not African...Not Asian...Not European...

Respect, enjoy and learn about others' cultures, but if you want to be
American, then BE American.

But, being an American has never *had* to have a definition, Steve. I disagree with you on the below. I don't care if someone speaks another language in public and far be it from me to tell them what language they *have* to speak in public.

What I would agree with is someone on the other side of the counter speaking English, *in a predominantly English speaking part of town.* I can't stand it when I go into a place of business and the person providing the service cannot speak English. BUT, if I am in the Hispanic part of town, or whatever part, then I don't have a problem with that person who's been hired speaking that language.

I still just plain wonder when the folks who are professing all this "preparedness" stuff (and really more using it to feel like gods) are going to tell us all that they are prepared to conduct successful life-saving surgery.

I bet all they've done is go so far as to learn how to apply a band-aid, the good for nothing knuckle-dragging, beer swilling, (whatever the hell else that usually says). {:^

I find hard to agree with myself that it is "OK" to have these flippant feelings about fellow human beings, in the wake of the disaster in NY and DC. Something just doesn't quite feel right about it. ESPECIALLY given that this is just all about ham radio, right? Hmmm, maybe ham radio to some of these guys, is really their screen to be the gods they think they are. Yeah, that's probably it.

Shame on you.

And hence the groundwork for gang infestation.

There should NOT be an "English" or "Spanish" or "Lower Slobovian" side of
town.

"ONE nation under God" is what the pledge says, and by golly, I (as should
any other person) should be able to travel from one side of town to the other
without having to take a Berlitz language course.! ! ! !

No...no "this" side of town or "that" side of town....

One country...One flag. Celebrate and enjoy the differences, but we are
either one people with a common goal or we are not.

If WE are not, "they" have won.....or will...

Not so! There are LOTS of reasons for any and every ham to learn CW. (I've got a list right here....)

I think what you meant to say was "there is simply no compelling reason to REQUIRE that hams learn CW in order to get a license".

The first statement is anti-code. The second is anti-test.

>Indeed, not one
>arguement to sustain code requirements seems to have been
>of any convincing to the FCC and the international community.
>
The FCC and its foreign counterparts seem to be pretty clear about that.

But the FCC says some pretty odd things. For example, anyone who can show that they ever held a Novice license automatically gets code test credit. But that does not apply to any other license class, and a CSCE is only good for 365 days!

So we have the following paradoxes:

A ham who had a Novice decades ago but let the license go gets credit, but a ham who skipped the Novice step does not. Same for the holder of an Element 1 CSCE more than 365 days old. Huh?

Sounds like you don't know the definitions, Jim.

Truth can be whatever a man is sincere about.
From Webster's: "truth - sincerity in action,
character, and utterance" Note that truth doesn't
have to agree with the facts. "fact - the quality
of being actual"

So truth is whatever someone sincerely believes to
be true even if it is factually false.

That's what Hitler said. This is a free country, Steve.
Some of those freedoms are to choose to speak a different
language and have a different color skin and have a
different religion. It is an extremely good idea to know
and use English but I will defend anyone's freedom not to
use it when talking to someone in public who understands
another language better than English. The purpose of communications
is understanding. You seem to want to cripple understanding
by requiring people to use a less than optimum language (for
them). Even the French allow English to be spoken in public.

Yes, it IS a free country. And in order for it to continue to BE free is for all it's citizens to have a common frame of reference.

As for Hitler...well, all I can say is that anytimime someone wants to discredit something, they point out that Hitler made some reference to it at one time or another.

>You seem to want to cripple understanding
>by requiring people to use a less than optimum language (for
>them). Even the French allow English to be spoken in public.

My point here is not to disallow the use of any other language, Cecil, but to REQUIRE English as a COMPETENT language for ALL American citizens or permanent residents.

Thanks Cecil, at least you understood the, granted small amount of, humor meant with that post..... CW is a method of transmission, not a language. Same way with all these operators working in the "75" meter band, last I checked, this was a shortwave broadcast band, not a ham allocation. However, my handy-dandy ARRL frequency allocation chart shows clearly there is an 80meter and 40 meter band for our use. Still can find the 75meter band.

The persoin being tested can take the General written test without first taking the CW test. A person can even take the Extra test without taking the CW test. Of course, to be upgrade to General or Extra that person has to upgrade within one year, if not credit for passing the written test will go away.

In article <j33r7.4980$Dz6.148827@e3500-atl2.usenetserver.com>, "Jerry Oxendine" <joxendi@bellsouth.net> writes:

>1. Amateur Radio is NOT an "academic" activity?????
> I submit to you, Lenny, that "academic" refers to learning.

No. "Academic" refers to an educational organization such as a college or university. The FCC grants amateur radio licenses. The FCC is NOT an academic institution. Ergo, the amateur radio test is not an academic test.

There is NO requirement to advance your personal knowledge nor "upgrade" nor do anything more than a ragchewer having fun. If you DO learn something new, that is for YOUR benefit. [see Part 2.1 c and Part 97 for "personal learning"]

> I am NOT an electronics engineer.

That isn't a requirement.

>It is still a hobby, after all.

I agree with that. Some others do not.

> But IF I have LEARNED something in my pursuit of
> this hobby, then ham radio is, indeed, academic endeavor.

Sorry, no academic organization will give you a certificate to attest to that...you must take a test that they specify. To repeat: The FCC grants US amateur radio licenses. The FCC is not chartered as an academic institution.

If you have learned something personally, that is good. Such is called personal intellectual advancement.

> If it still existed,
> I could show you the Advanced test I took a number of years ago.

Yes, yes, and if I still could get it I could show you my First Class Radiotelephone license test (all four parts)...or my college finals...or my high school finals. Or extension courses I took that were not for credit towards a degree. "Academic" refers to activity at an educational institution. The tests given by an academic institution grade students on what they have learned in class and those tests are accepted by other academic institutions as to subjects learned.

The FCC test is solely for the FCC's use in determining whether
or not an examinee should be granted a radio operator's license.
It is solely for the FCC's purpose as part of its regulatory task.

A granted amateur radio operator license carries with it a
"callsign." That callsign is NOT a degree, NOT a certificate of
learning. The callsign is the amateur's station identification.

Many US radio amateurs think that a ham license is a virtual
degree. That is their problem in overmuch pride. The ham
license means the licensee can transmit RF and communicate
using allocated amateur frequencies using allocated modes,
not for pecuniary reasons. Amateur radio is a hobby.

>2. Health and Welfare traffic and activities ARE emergency traffic. After
> all, it is usually an emergency that causes such traffic to be generated.

"Emergency communications" involves communications about
immediate concern of life and property. Such is not just
"traffic" (messages) but is the whole range of communication
modes: Voice, video, data/teleprinter, facsimile, etc.

"Health and welfare [traffic]" is a good thing, giving emotional
support and information to friends and family of disaster
victims, news of various kinds about victim's health and
safety. It is NOT "emergency communications" per se,
regardless of the spin put on it by an amateur membership
organization.

There HAVE been a few rare cases of amateur-originated
communications which DID directly affect human life (the
victim of a piracy attack as one case in the last decade).
That is TRUE emergency communications.

> When Amateur Radio is being used to coordinate the move-
> ment of personnel, supplies, food, surveying damage, it IS emergency
> traffic.

Agreed...but...there isn't any news media reporting that radio
amateurs are or have "taken over" the FDNY radio comm or
the NYPD radio comm or the FBI radio comm or the radio
communications of New York City government, New York
state government, or USA government. All of those agencies
have their own radio equipment. Is the FDNY using amateurs
to coordinate the movement of fire department personnel?
Or is the FDNY using existing infrastructure communications?

The news media have shown and written that volunteers of
all kinds have brought in so many "supplies" other than
construction equipment, medical equipment that those
volunteers were requested to stop, it is too much and
getting in the way. Audio and video recordings of officials
and doctors saying so seem to be valid testimony to that.

Is "surveying of damage" to the WTC complex or the
Pentagon best done by building and safety personnel
whose jobs concern building structures or is it to be
handled by radio amateurs? The news media has
reported such surveying in detail from professionals.

> Amateurs are often tasked with more than just jabbering on a radio,
> Lenny, and all you gotta do is talk to most local EM's to discover this
fact.

I have talked to part of the "local EM" (the disaster communications
organization of the Greater Los Angeles area) before and after
the Northridge Earthquake of 1994. I am aware that "easterners"
are tired of hearing about experiences in the most populous
state of this union...that the state of California has organized,
drilled, trained for emergencies and disasters with an integrated
set of agencies who welcome all citizens who can do the job
working for the benefit of all other citizens.

The FCC regulations state that REAL emergency conditions
permit anyone to communicate on any part of the EM spectrum
without needing any license.

>Amateur Radio is often used to take pressure off OTHER "professional"--as

The cutoff of ENTIRE primary electrical power to an area of
ten million population should be "pressure." Nonetheless,
all those who were equipped, trained, and drilled for
emergencies handled gas main fires, building fires, collapsed
freeway overpasses, collapsed buildings, and the "black
start" (of electrical power restoration small area by small
area). Hospitals had their own emergency electrical power,
ambulances had radios, everyone doing their assigned
tasks as trained with existing equipment. Could radio
amateurs "fill in" without training or organization as
"emergency communicators?"

>3. IF Amateur Radio is so "irrelevant", why are Amateurs accorded a seat in
> state and local EOC's? Hmmmmm, Lenny? Why don't they call on the
> "freebanders", the "10-4, Mercy Me Boys?

REAL emergency communications does not involve personal
squabbles of "ham v. CB." The Attack on America on day
9-11 concerned citizens of the USA. Amateurs have to
figure out whether they owe their allegiance to the ARS or
to the USA.

I stated earlier that I had not seen any news media cover any
of the noble, pure, and selfless efforts of amateur radio in
aiding rescue efforts...not in newsprint, not in video news
that was almost constant in reporting many things in the
week following day 9-11. Amateur radio efforts were only
lauded on amateur radio websites, in particular at the ARRL.
If all the amateur radio efforts were so good and true as

described on amateur websites, why weren't they included in the vast reportage of the new media? The news media covered an enormous field of activity.

I just asked a couple of questions...but touched off a few accusations that ranged the gamut from labels of near-treason to "ignorance of the glory of being a Ham!" :-)

Think about news from the average US citizens' point of view. US citizens have been almost bombarded with information on day 9-11 and its aftermath. Amateur radio has had little or no mention in that megaton of information. Compare that to the amateur radio "news" media where there is a constant boosterism of hams giving "high-fives" to other hams for "their" efforts as if "all" of them were participants all doing noble, good, and true things...and that "they always had." The real news media doesn't seem to cover those activities. Is that the "fault" of the real news media? Is it some secret "conspiracy" to suppress all those good works? No.

>'Nuff said~!

No, it isn't. REAL emergencies require ALL citizens to work together in whatever way they can. Integrated, united in effort for the common good. Unity and integration cannot work when one component makes it into a contest of which group is "best." Unity and integration isn't achieved by bringing out petty squabbles and accusations of perfidy against "opponents" of previous discussions or about "turf wars" of one radio service against another radio service.

The United States suffered greatly in the first day of this new Terror War...but the Unites States remains a democratic republic and still retains the rights of free speech. Such rights are not abrogated by a few venting anger and rage against others because they have "real (amateur) licenses" and are of "superior rank" within the ARS.

The "angry people" have to figure out where their allegiances really are and where their anger should be directed. Are all the "angry people" just hanging on to some fraternal group patriotism, trying to wrap some bunting around themselves because a few others actually went out and did good things? Is their fraternal patriotism really justified or are they really practicing unjustified self-enoblement?

Those that are and were heroes in a horrible disaster such as the Attack on America have received their respect and honors from the nation and are recognized in the news media for that. The real news media has singled out, highlighted a lot of heroes in this past week and a half.

Let's keep things in perspective here. A hero medal isn't
automatically issued with every US amateur radio license.

Leonard H. Anderson

>There are thousands of hams who mastered the Smithc chart and vowed never to
>use it again, either.

There is proof of this? An "official" poll? :-)

>Modern simulation programs eliminate the need to use tools like the Smith
>chart.

Oh? What "programs" are those? Please list a few.

The Smith Chart is a visual aid and an approximation insofar
as numerical accuracy is concerned. It is such a handy
visual tool that hardware network analyzers present their
analysis results AS a Smith Chart.

A Smith Chart does NOT "solve" things by itself. It can show
VSWR of a plotted impedance or admittance. It can show a
stability area for an amplifier. It can show how to "rotate" a Z
or Y (by adding or subtracting a transmission line length) so
that it can be better matched by a matching network. It can
show the trend of Z or Y over frequency of a device to aid the
designer in changing the device to fit an application. It can
be a very good aid for those working in complex quantities.

>73 de Jim, N2EY (who hasmastered, and uses, both Morse and the Smith chart)

Mastered the Smith Chart and equate it with morse code?!?!?!? :-)

I'm going to HAVE to go to the next PGMTT monthly meeting
and drop that little gem on the folks there. :-)

Minus j M, to anyone who already knows complex quantities and
the general basics behind impedance or admittance, a Smith
Chart can be "mastered" in less than a working day. It is a
subtle, elegant in simplicity of illustrating Z and Y relationships.

If there be "mastery" then it is is in understanding the concepts
of impedance (Z) and admittance (Y) versus frequency and
applying them to achieve maximum RF power transfer. The
Smith Chart is a tool to achieve that end quickly and efficiently.

"Phil Smith's Wonderful Diagram" (as one industry publication put it long ago) has been an enormous boon to thousands who work and have worked with AF through RF for a half century. Amateurs who do nothing more than ragchew and collect wallpaper without venturing into technology beyond their radio's front panels don't need it to ragchew and proclaim themselves "masters" of radio.

No. He has until 09 October 2002. The day that the CSCE is issued doesn't

It does make a difference when a February 29th occurs within the period.

I know the definitions, Cecil. I just don't agree with your
interpretations.
>
> Truth can be whatever a man is sincere about.

Just a man? What about a woman or a child?

Nope.

Truth is reality.

If you want to define "truth" as "whatever someone is sincere about"
then you are defining it to be subjective, not objective.

> From Webster's: "truth - sincerity in action,
> character, and utterance"

You partially quote the dictionary all the time. Doesn't mean a thing.

> Note that truth doesn't
> have to agree with the facts.

Sure it does.

>"fact - the quality of being factual"

That's a non-definition. Like defining a circle as having the quality
of being circular.
>
> So truth is whatever someone sincerely believes to
> be true even if it is factually false.

Nope. I sincerely believe that truth is only that which is objectively
true and agrees with the facts. All else is not truth.

> being is going to allow us to interfere with his prophecies?

Actually, Cecil, I think God cheats. He looks into the future, sees what kind of gross stupidity mankind exhibits, and then goes back in time and "inspires" the prophesy. The people who hear the prophesy don't believe it because they think all prophets are nutburgers, so the Temporal Prime Directive isn't violated. The people who fulfill the prophesy are impressed as hell, but it's after-the-fact then.

I think the Old Guy does this strictly for yucks. He's rolling in dough from playing the commodities market and gets bored easily.

>> I submit to you, Lenny, that "academic" refers to learning.
>
>No. "Academic" refers to an educational organization such
>as a college or university.

(1) YOU, Lennie the Licenseless, have stated the very same thing some several months past. No, I am not going to dig it out of Google. Your statement was to the effect that one now had an opportunity to progress thier learning. "Academic" was a word YOU used several times.

(2) You have been provided the names and addresses of colleges in YOUR vicinity that DO accept licensure (or at least did in recent history) for credit.

>> But IF I have LEARNED something in my pursuit of
>> this hobby, then ham radio is, indeed, academic endeavor.
>
>Sorry, no academic organization will give you a certificate
>to attest to that...

Bravo Sierra, Lennie. Again, I refer you to Saddleback Community College in Orange County (or whatever it may be called today...) They DO accept Amatuer Radio licensure for elective credit in sciences. Credit of licensure may not be a "certificate", but it certainly "attests" to one's accomplishments.

>The FCC is not chartered as an academic institution

You keep trying to harp on this as if it somehow validates your false assertion that Amateur Radio is not a vehicle for learning.

Learning occurs even in the pre-licensure stage. Ergo YOU are wrong...again...

>The FCC test is solely for the FCC's use in determining whether
>or not an examinee should be granted a radio operator's license.
>It is solely for the FCC's purpose as part of its regulatory task.

And may, at the discretion of the granting authority, be used for validation of other education. That it is not "intended" or "chartered" for that purpose is (like you, Lennie..) irrelevant.

>A granted amateur radio operator license carries with it a
>"callsign."

No, it does not. A station license does. That the FCC incudes both on one document is for administrative relief, not seperation of the intent.

Note FCC legal proceedings. They make revoke one and suspend the other.

>That callsign is NOT a degree, NOT a certificate of
>learning.

You got one right. The callsign simply identifies a legally licensed radio station in the Amateur Radio Service. (You ahve neither...) In some cases the callsign may reflect the class of operating priviledges of the licensee, but it is neither mandatory nor required that it do so.

>Many US radio amateurs think that a ham license is a virtual
>degree.

Many is indicative of one. Obviously you must know a few. Names, please, and cite the reference wherein such an assertion was made, lest your credibility slip even further into oblivion.....

>That is their problem in overmuch pride.

Making such denigrating slurs is yours. So what? Your proof, please...?!?!

>Amateur radio is a hobby.

Amateur Radio is one of many radio services regulated by the FCC that may be pursued by the licensee as a hobby.

The FCC regulates radio services, not hobbies.

>"Emergency communications" involves communications about
>immediate concern of life and property. Such is not just
>"traffic" (messages) but is the whole range of communication
>modes: Voice, video, data/teleprinter, facsimile, etc.

You mix mode and message. Stupid, Lennie, very stupid. Evidence your arrogance that you'd think we'd let that pass.

And when that concern for life is letting your family know that you escaped a tragedy such as the WTC attack, it IS an emergency to those concerned.

That YOU, from the luxury of your arm chair don't deem it so is (as are you) irrelevant.

>It is NOT "emergency communications" per se,
>regardless of the spin put on it by an amateur membership
>organization.

As it is with almost any other emergency communications provider, the nature of the emergency is determined by the author of the message, not the relayer of it.

You have absolutely NO right to determine what is an "emergency", per se
or otherwise.

>>When Amateur Radio is being used to coordinate the move-ment of personnel,
supplies, food, surveying damage, it IS emergency traffic.
>
>Agreed...but...there isn't any news media reporting that radio
>amateurs are or have "taken over" the FDNY radio...(SNIP)

More and more arrogance. What a Putz, Lennie. Who has to "take over" a
radio system in order to be doing these things?

Whether YOU consider the sources valid or not, Amateur Radio IS being used
by many of the Agencies with whom the ARRL has MOU's to serve, and it's just
too bad for you that they are, I guess.....

>The FCC regulations state that REAL emergency conditions
>permit anyone to communicate on any part of the EM spectrum
>without needing any license.

Yep...to save life and limb. Responding to a ship at sea...an aircraft in
distress...an unlicensed wife using her husband's 2M rig to call for aid when
he had an MI...

The circumstances YOU try to cite have nothing to do with that caveat.

Nice try, Oh Devious One...

>Could radio
>amateurs "fill in" without training or organization as
>"emergency communicators?"

Possibly. But that wasn't a problem. NYC ARES and RACES are well
established programs with liasion's in most NYC hospitals, Red Cross and
Salvation Army facilities.

Facts, Lennie....Just plain facts.

>REAL emergency communications does not involve personal
>squabbles of "ham v. CB."

At the moment of need, quite correct. But in retrospective discussion
(ie: this forum) it does. And the fact remains that with the exception of the
ORGANIZED and TRAINED REACT teams, CBers are not typically used for ORGANIZED
disaster releif efforts. No discipline, no coordination, and no training.

>Amateurs have to
>figure out whether they owe their allegiance to the ARS or
>to the USA.

Some of the most COWARDLY and ARROGANT tripe you have ever spewed, Lennie.
You are one ugly piece of work, Anderson. Ugly.

>Amateur radio
>has had little or no mention in that megaton of information.

Neither did Civil Air Patrol or the Coast Guard Auxiliary...but both have
been there and provided aid. Does that mean that what they did has no value to
the citizens served?

Does everything have to be on a mammoth scale to have met YOUR criteria
for "valuable", Your Gutlessness? (Or is it "Glutelessness...I can't make up
my mind...)

>Compare that to the amateur radio "news" media where
>there is a constant boosterism of hams giving "high-fives"
>to other hams for "their" efforts as if "all" of them were
>participants all doing noble, good, and true things...and
>that "they always had."

And compare it to the "news" media of any other agency rendering aid. Why
do you insist that it is somehow inappropriate for Amateurs to recognize thier
own for a job well done?

>The real news media doesn't
>seem to cover those activities. Is that the "fault" of the
>real news media? Is it some secret "conspiracy" to
>suppress all those good works? No.

Perhaps, You Cowardly Punk, it's just because Amateurs go about the
business of rendering the service they do witout worrying about who's going to
stroke thier fur after the fact.

>No, it isn't. REAL emergencies require ALL citizens to
>work together in whatever way they can. Integrated,
>united in effort for the common good. Unity and integration
>cannot work when one component makes it into a contest
>of which group is "best."

And if you were licensed and active in current Amatuer Radio programs,
you'd know that what you just spouted off about is already in place.

It's just that YOU don't have any experience to gauge it by.

>Let's keep things in perspective here. A hero medal isn't
>automatically issued with every US amateur radio license.

No, it's not. but there are a few in New York who hae earned one. You
might have too, had you had one, Your Gutlessness.

>Leonard H. Anderson

>Amateurs have to figure out whether they owe their allegiance to the ARS or
>to the USA.

Lennie, unlike Armchair Quarterback Punks like yourself, the Amateur Radio Service as a whole and it's many licensee's as individuals have no such determination to make.

It and they have been lauded over and over again by the Department of Defense, The State Department, The American Red Cross, The Salvation Army, and a whole gamut of public service organizations and individuals who have had good reason to make such accolades.

That you don't seem to see past your own hatred and prejudices is irrelevant. The facts are that Amateur Radio DOES continue to SERVE the needs of the nation, both locally, regionally, and nationally. That the "real media" doesn't splash it on page two of the Los Angeles Times everyday does not make it any less true.

Your above quoted comments were among some of your more COWARDLY and ARROGANT effluent. Even ugly for you, and THAT is awfully ugly.

4681. Extra Class - Not without experience

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-24 20:01:07 UTC
From: Bob Raymond <braymond@iea.com>
Message-ID: <7iMr7.188$Le.11405@sea-read.news.verio.net>
Source record: 20925

Here is an article I have submitted to QRZ.COM

It is my understanding that the Extra Class license was intended to be the elite class license. Here are some expectations I make of those that qualify for this elite class of operator: - They will have "mastered" the art and technique of amateur radio so that they may demonstrate such to lesser class licensees. - They will have acquired sufficient operating and technical expertise that they fully "understand" the basic principles. Here is the point I am trying to make. When an extra class licensee is unable to build or erect a simple dipole antenna, I question the elite status of this individual. When an Extra Class licensee complains to me (a lowly Advanced Class) that my transmissions are causing RFI to his home theatre and that he does not transmit from his own station for fear of wiping out his own TV... I really have to wonder about the elite status of this individual??? Apparently, at least some of these Extra Class elite operators are able to somehow memorize the questions and answers to the test(s) and obviously have NO PRACTICAL EXPERIENCE. I propose that there be an experience requirement levied upon all who seek the Extra Class License. While going from Technician to Extra Class in one day is quite a remarkable achievement, I feel that some element of 'experience' should be a requirement for Extra Class. Perhaps a requirement to have been a licensed ham for X number of years? I can readily forsee where ham radio will be comprised of all chiefs and no indians...I hope I never see that day.

P.S. This has NOTHING to do with code vs no-code or newbie vs old timer. I value all new members to our hobby, I simply feel that our highest class of license should be RESERVED for those that have EARNED it.

Hans Brokeslob sails again.

That the very quoted item states that no intention was made ot limit anyone's freedom to exercise thier right to speak whatever other language they may choose leads one to wonder what Han's motivation was here. I know what it was, but Hans could never admit it.

>This is America, Steve, not the Marine Corps.

Hans you are the SECOND most cowardly and arrogant Putz in the NG, second only to Lennie the Gutless.

The USMC will, once again, be called upon to defend the very rights you are allegedly "defending" here, yet you make some insinuation that it somehow supports abridging those rights...not defending them.

Of course the irony of that is lost on you. You are too stupid to realize it...Or perhaps you just don't care...?!?!

The Constitution and the
>Bill of Rights allow us freedoms which cannot be abridged by your
>Taliban-like "requirements".

There is no "Taliban-like "requirement", Your Creepiness.. The assertion that English should be a REQUIRED language (and please note that my other exchanges with Kim NEVER excluded ANY other language) has been the subject of lengthy debate in the Congress of the United States, many of the State's legislatures, and on occassion, a referendum on numerous ballots in numerous states, the latest and most recent to mid being the State of California, allegedly the most liberal state in the Union.

Are THEY "Taliban-like", too...?!?! Or do you just insult people who make you look in the mirror and face your own foolishness?

Now...I know it must have been painful for you to take your hands out of
your fly long enough to draft this, so I will let you run along.

I am sure Mrs. Brokeslob wonders what her little Hansie is up to.

Cruising for a bruising, are we old timer?

Thanks, Jim.

There is some other thought that suggests that this betrayal was done to force
Jesus' hand. By virtue of the healings and miracles witnessed by the disciples.
Judas and his cohorts in crime thought that Jesus would NEVER allow himself to be crucified being that He had the power to prevent it. No one, after all,
would willingly go thru such if he had the power to go POOF and waste every Roman soldier. They STILL believed in Him, but he wasn't MOVING fast enough to suit them, so..... But, again, I don't say I put full weight behind
this, I just present it as plausible evidence of some of the stuff that "might" have
been going on behind the scenes.

Maybe the way out of the mess is for a Smith Chart test could replace
the code test.

Understanding the Smith Chart and being able to use one actually
demonstrates several areas of knowledge and skill. Smith Chart tests
could consist of interpreting a solved problem on one chart, (the
"understanding" test) then solving a different problem on a blank
chart (the "solution" test). At first, most hams and wouldbe hams
would would simply study the Smith Chart and pass the tests.

But then the trouble would start...

Some hams who had not passed the Smith Chart test might say that those
who had
passed the test were being "elitist" about their Smith chart skill and
knowledge. The term "chartless Extra" would be considered an insult by
some, a
badge of honor by others. Some would grumble that since they have no
desire to
design antenna/transmission line systems, they should not be required
to pass a
Smith Chart test. They would point out that other services do not have
Smith
chart testing, and so neither should hams.

Defenders of the tests ("Smithys" or "chartists") would claim that the
Smith
chart was a "uniquely practical, efficient, and universal" tool for
antenna/transmission line work. They would claim to have been
"smartened up" by the Chart test requirement. Stories would be
recalled about how lives had been saved by hams able to quickly design
matching sections to permit using an antenna on a frequency it was not
designed for, and would predict dire consequences in the event of
widespread disaster.

Those opposed to the test ("Smithless" or "nochartists") would argue that
newer, more accurate, less error prone software systems had left the Smith
chart in the dust. "We don't want to use OLD design methods" and "The Chart is
too slow and error prone" would be their rallying cries. Other would ask "do you
have to show slide-rule proficiency before using a calculator?"

There would be testimonials by hams who had worked 300 DXCC countries
using QRP and a dipole without any reference to a Smith Chart, and
claims of others who "had rote-memorized the Chart and promptly forgot
it all as soon as the test was over". Some would tell stories of new
Extras who held Chart-burying ceremonies at the base of their antenna
systems (designed without Smith Charts, of course).

Many would claim that young people, used to solving even minor addition
problems on computers, had no interest in learning old fashioned graphical
methods. Some would say that the emphasis on such a timeworn, old fashioned,
crude graphical method of solving problems made ham radio look backward and
nonprogressive, and was downright embarrassing. Ph.D's in EE would claim that
they had designed entire radio communication systems without use of the Smith
Chart, yet were kept out of ham radio because of the test.

The arguments would become more heated and insulting over time. Nochartists
would point out that the Chart test was discriminatory. For example,
blind people could not fulfill the letter of the law in passing the test. Some
would claim to be "chart impaired" and unable to pass the test due to inability
to do geometry. The question of "chart waivers" would be raised, and much angry
invective spewed over "chart fraud" and "open chart pools". There would be a
demand that the use of graphical calculators be allowed in the tests.

Chartists would claim that accomodations such as Braille Smith charts met the
intent of the law. Old timers ("quillpenners") would recall a time when all
charting was done by hand, in ink, on chart paper costing the modern equivalent
of several dollars a sheet. (They used ink because they were so confident of

doing it right the first time).

The use, or nonuse, of the Chart by military and commercial services would be
hotly debated. Some nochartists would claim that the military stopped using the
Chart during WW2, while some chartists would claim that the Smith chart plays
a crucial role in the modern military.

A popular summer blockbuster movie starring Jodie Foster, Will Smith, Jeff
Goldblum and Bill Paxton would have a plot in which alien invaders were
detected, then repelled by means of a hastily reactivated surplus Russian
over-the-horizon "woodpecker" radar system. The critical plot element would be
the heroine's use of the Smith Chart to match the "woodpecker" transmitter to
the Arecibo dish. (How the Russian radar wound up in Puerto Rico would be left
unexplained).

The ARRL, Gordon West, and W5YI would be caught in the middle of the debate.
From the first, they and others would have marketed a whole line of Smith chart
training aids, including books, videotapes, and software. W1AW would transmit
SSTV programs explaining chart use, and MFJ would market "portable personal
chart trainers". Claims of monetary interest in the production of Chart
materials would be made and denied. Poorly worded surveys would show a
variety of opinions on the issue, but no consensus.

Nochartists would claim that the chartists were just "old f***s" who were
supporting the status quo due to "chart chauvinism", and did not understand the
realities of the modern age. A few chartists would claim that the nochartists
were just whiners who were too lazy to even learn how to hold a compass
correctly. The need for "high speed chart tests" would be debated hotly, many
claiming that no time limit should be placed on the chart test. "One Chart per
week satisfies the law" would be their claim, while skilled chartists spoke of

doing 30, 40, even 50 charts per hour, and being able to "see the solution
without even making a mark on the chart".

Eventually the nochartists would organize a group to fight the chart test. The
founders of No Charts International would claim that they had no problem with
anyone USING the Chart, just the mandatory test requirement. "It's not the
CHART, it's the TEST" would be a common rallying cry.

Bravo, Steve!

When I read the "Weakest Lenk's" reply, I was wondering what you just touched on: Since WHEN it is necessary for people or organizations to have media recognition for their efforts to qualify as emergency aid or comm-
unications? I know for a damned FACT that CAP was involved, yet it didn't get ANY coverage that I am aware of--it rarely does. I was WORKING in my capacity as a CAP member up on FEMA freqs. Just because I didn't get MY fur stroked doesn't mean I wasn't doing anything. I was also in touch
with the local ARES and EOC during the first hours when we were uncertain if something else might happen. The fact is that AMATEUR Radio is STILL a part of the total communications picture in NYC, they would NOT BE there if they weren't needed, and AMATEUR Radio is a part of every local/state EOC I know of. Just because they don't receive MEDIA coverage everytime a ham leaves his EOC desk to take a sh** doesn't mean they AREN'T in-
volved. Hams lend their services whenever, wherever they are needed and do not ASK for wide coverage--same as the CAP members do, and a measure of their dedication IS their willingness to do so behind the scenes with the certain knowledge that what they do makes a DIFFERENCE in peoples' lives. That is the benchmark of a true volunteer. It is exactly within the spirit
of what John Kennedy said: "Ask NOT what your country can do for you, rather, ask what YOU can do for your country." In most cases, the activities
that go on behind the media coverage are, at least, as important as those the
media plays up to the public. Ham radio is there, will BE there, will volunteer
in every crisis to come. Meantime, ask the EOCs down in Florida about ham radio's role in the recent storm that passed over their state.

Jerry

Amateur operators play a vital role in disasters, my experiances working
with the Red Cross disaster services on large disasters have shown me that
communications are a vital need. During, and after a disaster, phone lines
are jammed or down, same goes for cell phones, the radio operators pitch in
and assist in any way they can. I worked with many in Houston earlier this
year, they did a remarkable job. In WV during the flooding there I worked
out of Mullens WV, in Wyoming County, I only saw one ham there and he was

overworked. Maybe if some of you here that seem to have nothing better to do that slam each other verbally would go out and actually perform in one of the main purposes amateur radio was founded for, you'd have a better picture of whats going on around you. I intend on getting my license, code and all. I know that the vast majority of hams are cool and eager to share their knowledge with new people, and that the few here who have nothing better to do than b*tch are the minority among hams. Flame me all want I do not care, I am not out to get any recognition for my work with disaster relief, I just want to help, so those complaining that hams are not getting any press, just what the hell are you into this for? I am a volunteer, I prefer working behind the scenes. If you want public attention become a DJ.

A Smith Chart is only useful when used with known impedance
or admittance values. Such data requires measurement of both
parts of those two complex quantities. That isn't rocket science
nor does it take thousands of dollars invested in test equipment.

A moderately well-calibrated noise bridge plus a receiver plus
some simple calculations will provide the data. [I could mention
an article that explains all that but such mention causes certain
folk to go livid and rail about curriculum vitae, etc. :-)]

Once you have the complex value data it is a simple matter to
plot those on a Smith Chart. The data should be at several
frequencies, not just one. Connecting the chart plot points
indicates the "trend" in values..."resonance" too high or
"resonance too low" or other possibilities. A circle centered
on the middle of the Chart indicates the VSWR of the
entered data as another example. From there the Smith Chart
user has many options:

If it is possible to introduce a matching network at the
antenna feedpoint, the exact impedance or admittance at the
feedpoint can be measured if the line length is known. The
line's loss can be determined from a separate plot of the line
alone with the feedpoint end open or shorted, measured over

several frequencies. The line's actual characteristic
impedance can also be determined as well as the true
velocity of propagation. Once the line is known, the original
plot points can be "rotated" on the Chart according to the
known line length in wavelengths. That yields the impedance
or admittance at the feedpoint, quite enough data to determine
the feedpoint matching network components.

If it isn't possible to put a matching network at the feedpoint,
preferred but only necessary if the line length is long or
approaches a half wavelength, then one can try the following:

The feedline can be lengthened or shortened until the Real
part (the resistance) of the rotated plot point set is at a
desired value on the chart. The imaginary part (reactance
or susceptance) of this rotated plot can then be read off the
Chart and used to calculate a reactance or susceptance for
a conjugate match (reducing imaginary part to zero).

If the feedline cannot be changed in length, the original plot
points can be manipulated on the Chart as part of designing
a matching network. There are many options there and the
match network design explanation is too lengthy to include
here.

>When the antenna resonates short and your SWR is about 1.7 you have
>just sucessfully created a roofing-nail heater.

At 7:1 perhaps, but not 1.7:1. :-)

It's a fallacy to think that a badly-matched antenna or line
dissipates heat just because of the match. With the usual
broad-band solid-state 100 W final, a severe mismatch will
change the characteristics of the final and it does NOT
output the rated power. Severe mismatches make load
characteristics of the final bad for the final, hence the
automatic shut-down circuitry in most ham transmitters.

>Doesn't take a chart to
>tell me that a folded dipole with a 90 ohm Q section will work a lot better.
>Educate me.

Maybe yes, maybe no. By observation most amateur radio
antennas in urban areas are too close to the ground to fit the
ideal cases shown in handbooks. The impedance or
admittance of any antenna will vary (somethines wildly) with
the influence of a "ground" or other conducting surface in the
near field (within 4 to 5 wavelengths from antenna center).
Actual measurement will bear this out.

One way to evaluate things is to use Roy Lewallen's EZNEC
program...or any of W4RNL's reviewed programs (Cebik's
columns at www.antennex are good reading, even have

pictures...) and model any antenna desired. It is easy to change ground conductivity and height abouve ground. It is not always easy to model nearby large structures such as power lines, chain link fences, or even large aluminum patio covers. All those programs yield Z or Y values at the antenna feedpoint. Z and Y changes due to height variation are easy to see. So are the pattern changes.

In truth, no one "needs" to do any of that. All can go ahead and "tune up" without all that "electrical" measurement stuff. With the right propagation conditions on HF you can even do DXCC with a roll of hookup wire tossed over a tree. :-) Such is always good for another fish story by "masters of radio..."

4690. Re: Ham Radio Testing

Newsgroup: rec.radio.amateur.policy

I suspect that may be in the hands of the VE. When I went in for my test, I took the novice, tech, and somewhere in the middle of the thing they asked if anyone in the room was looking for element 1-C. As I recall, about 6 of us did. I had not tested for any CW and was part way through the theory exams when I went to a table in the front with the rest of the gang testing for 20 WPM. So, I did not pass 5 or 13 - and had only completed part of the theory tests when I took the CW test. I then went back and finished the theory. I was there for a while. Over 3 hours as I recall.

You can take and pass all the written exams in one session, but you will be licensed as a Technician and hold the csce's good for credit for 365 days. You have that length of time to finish the 5 wpm code test. Pass the code test and become an instant extra. 5 wpm is embarrassingly slow and easy to do.

In article <1XMr7.14975$2H2.1325078@e3500-atl1.usenetserver.com>, "Jerry Oxendine" <joxendi@bellsouth.net> writes:

>When I read the "Weakest Lenk's" reply, I was wondering what you just
>touched on: Since WHEN it is necessary for people or organizations to
>have media recognition for their efforts to qualify as emergency aid or
>communications?

The ARRL documents a lot of that. Too bad it doesn't get into
the larger world of real news media.

>I know for a damned FACT that CAP was involved, yet it didn't
>get ANY coverage that I am aware of--it rarely does. I was WORKING in
>my capacity as a CAP member up on FEMA freqs. Just because I didn't
>get MY fur stroked doesn't mean I wasn't doing anything.

Just who dismissed Jerry Oxendine's work in any emergency?
Not me. I commented that the news media covers a lot of
things but hasn't covered amateur radio participation in the
NYC or Washington, DC, crises.

>I was also in touch
>with the local ARES and EOC during the first hours when we were uncertain
>if something else might happen. The fact is that AMATEUR Radio is STILL
>a part of the total communications picture in NYC, they would NOT BE there
>if they weren't needed, and AMATEUR Radio is a part of every local/state
>EOC I know of. Just because they don't receive MEDIA coverage everytime
>a ham leaves his EOC desk to take a sh** doesn't mean they AREN'T in-
>volved. Hams lend their services whenever, wherever they are needed and
>do not ASK for wide coverage--same as the CAP members do, and a measure of
>their dedication IS their willingness to do so behind the scenes with
>the certain knowledge that what they do makes a DIFFERENCE in peoples'
>lives.

Okay, you are "mad as hell and you can't take it anymore."

I asked a question regarding the news media's coverage of
amateur radio activity during the Attack on America. That
made you very angry and you felt a need to lash out against
someone who does not appear to share your allegiance.

My question hasn't been answered.

>That is the benchmark of a true volunteer. It is exactly within the
>spirit of what John Kennedy said: "Ask NOT what your country can do

Please don't wrap yourself in patriotic bunting. I did my bit
for grass-roots campaigning for John Kennedy. That was
eight years after I volunteered for U.S. Army service while
the Korean War was still going on. Are you telling me that
I have "no" volunteer spirit? Sure sounds like it...

My original question "challenged the true volunteer?" Or
isn't it that you just felt outraged and had to vent rage?
Isn't the rage mostly due to not having your opinions
shared or respected by all due to past newsgroup
exchanges?

>In most cases, the activities
>that go on behind the media coverage are, at least, as important as those
>the media plays up to the public.

That is your opinion, then? OK, then there must be some
dastardly conspiracy work going on to NOT publicize the
good works of amateur radio?

>Ham radio is there, will BE there, will volunteer
>in every crisis to come.

Okay, I guess that means that hams are more glorious
than all those US "civilians" (who don't have amateur
licenses) that DO volunteer and do get their names and
activities mentioned.

Your fraternal patriotism is not questioned.

I was questioning why the good works of ham radio in
the Attack on America isn't being brought out in the
news media. I wasn't questioning anyone's volunteerism
nor was I questioning any one person in particular.

I was questioning the ARRL's public relations, something
I've done well before the Attack on America. For years
they have been promoting amateur radio within the amateur
radio membership. Why haven't they done more to get
their word out to the larger body politic, evidenced by such
word in the news media?

>Meantime, ask the EOCs down in Florida about
>ham radio's role in the recent storm that passed over their state.

Why? Has anyone asked Los Angeles County's "EOCs"
about the 1994 Northridge Earthquake? I guess not. It was
one of those "minor Left coast" things, not very important
(except to 10 million or so), and didn't feature amateur radio
in an important role. The death toll was only 53. Is that an
"unimportant event?"

The news media didn't think it "unimportant." The Greater
Los Angeles disaster teams didn't think it unimportant. They
were organized, planned, trained and drilled for such things.

They were not put out of action by the entire electrical power shut-down caused by the 'quake.

Well before last week I've questioned whether or not amateurs are prepared for disasters as to training, planning, and integration with the existing emergency infrastructure. What I got was almost entirely jingoism, general phrases of fraternal patriotism that did NOT address the question.

I'm not questioning your patriotism, Jerry, why are you questioning mine?

With all kindest regards,

Leonard H. Anderson
ex-RA16408336 ('52-'60)

In article <CmNr7.35139$ga2.1648903@cletus.bright.net>, "Henry County American Red Cross" <arcweb@bnnorth.net> writes:

>Amateur operators play a vital role in disasters, my experiances working
>with the Red Cross disaster services on large disasters have shown me that
>communications are a vital need.

Communications are always a vital need in emergencies.
In this area (a small one of 10 million or so) the disaster
and emergency communications have been planned,
integrated, organized, trained and drilled using the
existing infrastructure consisting primarily of government
and utility and public safety services. It works. It has
been tested in conditions where the entire electrical
power system was cut off.

>During, and after a disaster, phone lines
>are jammed or down, same goes for cell phones, the radio operators pitch in
>and assist in any way they can.

Part of that sentence is correct, part is not.

It is not universally true that "phone lines are jammed or down
[including cell phones]." Firstly, that assumes that the "only"
communications is by the telephone system." That isn't true
everywhere, but more importantly it does not account for the
existing leased (not through switch center) wirelines or agency
radios that remain functioning...including primary electrical
power shut-downs.

It's nice to say that amateurs will "pitch in and help in any way
they can." All citizens should do that and many do. The
problem is ability to assist in any communications role. Are
all amateurs equipped with emergency power? Do they have
spare HT battery packs, chargers? Can they integrate with the
existing disaster communications infrastructure?

Those are real questions that need answers. Answers aren't
supplied by quoting generalized fraternal patriotism jingoism.
Answers come by amateurs becoming part of a disaster team,
organizing, planning, training, and trying to anticipate
situations thought impossible (such as total power outages).

>I worked with many in Houston earlier this
>year, they did a remarkable job. In WV during the flooding there I worked
>out of Mullens WV, in Wyoming County, I only saw one ham there and he was
>overworked.

Everyone is "overworked" in extreme emergencies.

>Maybe if some of you here that seem to have nothing better to do
>that slam each other verbally would go out and actually perform in one of
>the main purposes amateur radio was founded for, you'd have a better picture
>of whats going on around you.

According to the history of the ARRL, it was formed because
Hiram and some cronies wanted to relay messages (that's
the "relay" in the league's name). :-)

So, the US amateur radio service was "founded" on being an
emergency communications service? I don't think so...but I
know that I'll get a lot of jingoism in reply... :-)

>I intend on getting my license, code and all.

Hmmm...according to one of the Ruling Taliban in here, un-
licensed persons "don't know anything about amateur radio,
and well never know!!!" I've always wondered how someone
who isn't licensed can ever pass a test if they "know nothing
about amateur radio." :-)

>I am not out to get any recognition for my work with disaster relief, I just
>want to help, so those complaining that hams are not getting any press, just
>what the hell are you into this for? I am a volunteer, I prefer working
>behind the scenes. If you want public attention become a DJ.

What I originally questioned in here was a not-nice dig at the
ARRL, specifically their public relations. That's what I've done
long before the Attack on America. The question concerned the
news media and their reporting of amateur radio good works.

Some in here apparently owe their allegiance to the ARRL. They
impugned many personal faults for daring to ask such a question.
They also liberally sprinkled fond jingoism all over the place. :-)

On my question, repeated for all: If amateur radio efforts are so
important in the overall scheme of things, why isn't it lauded in
the news media? If the only places that laud amateur efforts are
amateur radio boosterism organizations, what can one surmise
about that disparity/dichotomy?

I'm sure that more jingoism will rattle and roll in here... :-)

> The basic problem in the world, other than hunger, is ignorance.
>Unfortunately, with literally hundreds of languages and/or dialects of
>various
>languages it is almost impossible to overcome that

You say almost impossible, that means it can be done and it should be done. There are dozens of other countries in the world in which people live from other countries, they have had to learn to host country languages to survive. If some one who makes the US home does not want to learn english, that is their problem. I im tired of this bullshit political correct crap. The langue of the US is english, plain and simple.

Just last summer my radio club set up a kids day sation at a local mall. We tried to post fliers in the local schools to promote the event. We where told by the schools that unless we posted our fliers in Spanish and Vietnamese we could not post them. Of course we being we had no controll opps that spoke Spanish or Vietnamesse we did not have fliers in the schools. Of cource this meent that the english speaking kids did not get to hear about our event. THE IS THE USofA, In myu opinion. learn english or kiss my but.

N2EY wrote:

> I know the definitions, Cecil. I just don't agree with your
> interpretations.

Then you don't agree with the dictionary and are apparently
feeling omniscient again. If you disagree with dictionary
definitions, that leaves you isolated and incapable of
communicating.

> Just a man? What about a woman or a child?

From Webster's: "man - a member of the species Homo
sapiens or all the members of this species collectively,
without regard to sex". I certainly wish you would crack
open a dictionary from time to time and stop embarrassing
yourself.

> Truth is reality.

Sometimes it is and sometimes it is not. Truth for you is
certainly a lot different than truth for Osama bin Laden.

> If you want to define "truth" as "whatever someone is sincere about"
> then you are defining it to be subjective, not objective.

You got it, Jim. A range of the definition of truth certainly
makes it subjective. That's what makes truth and facts different.
I really wish you would crack open your dictionary from time to
time and stop embarrassing yourself.

> You partially quote the dictionary all the time. Doesn't mean a thing.

That is one definition of truth, Jim. Your feelings don't matter.

>>Note that truth doesn't have to agree with the facts.

> Sure it does.

You are absolutely wrong about that, Jim. I certainly wish you would
crack open a dictionary from time to time and stop embarrassing yourself.

> That's a non-definition. Like defining a circle as having the quality
> of being circular.

Sorry you don't like it, Jim, but that's the dictionary definition,
not mine.

> Nope. I sincerely believe that truth is only that which is objectively
> true and agrees with the facts. All else is not truth.

It doesn't matter what you believe or how you feel, Jim. It is a fact
that truth and fact often do NOT agree. Let me give you an example.
You would probably say that the truth is that nothing can travel faster
than the velocity of light. It that a fact? Maybe it is and maybe it isn't.
Could be the fact is that, like Santa Claus, there's no such thing as
velocity except in the human mind. Could be that time, itself, is an
invention of the human mind and is not a fact of reality.

Please try to open your closed mind, look at your dictionary definitions
of "truth" and "fact", and come to a rational conclusion. Everyone who
has ever taken a college logic course is supposed to know the difference
between truth and fact.

You don't get it, do you? If English is not God's native language
then the US should give up English and convert to God's native
language which (I assume) is ancient Hebrew. We cannot be "one
nation under God" if we don't even speak God's preferred language.

Huh???? We are discussing making it illegal for anyone to use any
language except English in public in the US. Consider two French
married tourists who get arrested for speaking French in public
in the US. Consider the FBI staking out public parks trying to
catch and arrest anyone speaking a language other than English.
That certainly sounds Hitler-like to me.

Got news for you, Bob. Minimum entry level exams do NOT
guarantee elite status within the ARS. Elite status is
obtained through actions, not through testing.

In WV, cell phones simply did not work due to the geographical layout,
at least where we were in wyoming county. where as we had repeaters
including feild expediant repeaters, but only one ham. Now mind you he
had the two kitchen facilities, the service center, and the county eoc to
cover.

>know that I'll get a lot of jingoism in reply... :-)

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur
radio service having a fundamental purpose as expressed in the following
principles:

(a) Recognition and enhancement of the value of the amateur service to the
public as a voluntary noncommercial communication service, particularly with
respect to providing emergency communications.

>
>>I intend on getting my license, code and all.
>
>Hmmm...according to one of the Ruling Taliban in here, un-
>licensed persons "don't know anything about amateur radio,
>and well never know!!!" I've always wondered how someone

>about amateur radio." :-)

While I do not have my license at this time, I am not w/o knowledge
of the subject, I have relatives that are/were hams, I have many local
friends that are hams, and quite a few of the REACT members are hams.

I have been wanting to get my license for over 10 years, and now I finally have the time in my life to sit down and get serious about it.

>

I agree with you that one shouldn't do things for grandizement (not sure thats the right word), sure I have been in the paper a few times locally, as well as the TV. But not because I wanted to look big, it was because I wanted to let people know what was going on with different disasters, and to let them know how they can help out. When I am interviewed, I don't tell them about what I do, unless they specifically ask, I tell them about what
the other volunteers do. For example one pf my team has run the local government food distribution program for 15 years, the christmas cheer program for just as long. Last year at christmas time, he took some food to a needy family, a mother with 6 kids, her husband dumped her, her oven/stove was not working so she could not prepare the holiday meal. He took his own money and got the parts to fix her stove, and then went out and bought all her kids presents. We put him in for an award, he refused to accept it, to him just seeing them smile is all the reward he needs.

>The ARRL documents a lot of that. Too bad it doesn't get into
>the larger world of real news media.

CAP has it's own newsletter that, like QST, highlights "media hits".

That these stroies are not page two in the NY Times mena they didn't
happen or are somehow insignificant?

>That
>made you very angry and you felt a need to lash out against
>someone who does not appear to share your allegiance.

No, Lennie, your "question" has been a years-long rant against Amateur
Radio and your "concern" over routine media coverage a rather weak attempt to
validate your "position".

Sorry...That dog don't hunt.

>My question hasn't been answered

No problem. There are about 3 or 4 dozen that have been put to you by
numerous persons and you ahve convieniently ignored most of those, too.

>Please don't wrap yourself in patriotic bunting.

No...Please do. Lennie can't stand it when you wave the flag and he
realizes he doesn't have one too.

>I have "no" volunteer spirit? Sure sounds like it...

Let's see....so far you ahve volunteered for JFK's campaign in 1960 and you
were on scene at an earthquake in 1970-something (that you participated in as a
responder...NOT "experienced")

Two event in over 40 years. That's pretty lame, Lennie....

>That is your opinion, then? OK, then there must be some
>dastardly conspiracy work going on to NOT publicize the
>good works of amateur radio?

Another conspiracy theory of yours, Lennie..?!?! You seem to ahve lots of
them. Of course MOST of them are how "elitist" Extras are trying to prevent
motivated youngsters from getting licensed...Or how the ARRL BOD is

intentionally trying to subvert licensing in order to manipulate membership...Which is equally dumb since "more hams=more members" if it's doen right.

More stories...more chances for you to twist it up.....

If you don't pass your Morse Code exam, it's because you didn't use Code Quick (http://www.cq2k.net).

With Code Quick, you bypass the drudgery of memorizing dits and dahs. It's silly and over-the-top, and that is why it works. You use cutesy sound-alikes to learn the rhythm of the characters. For example, L is "a LIGHT is lit". You'll notice that the only people who knock Code Quick are the ones who learned Morse Code through another method. (Of course, everyone thinks his/her pet method is the superior way and pooh-poohs all the rest. Just do what works for you.)

I hope - I SINCERELY HOPE - you're not talking about DXCC. I mean that. I won't go over my experience when I was trying to run phone patches from the U. S. Naval Hospital on Guam when some dunderhead from Hawaii tried to run me off because there was an 'important dx contest going on'. Frequency was unoccupied - he responded to my CQ. I only asked him to give me a land-line so I could tell him what I thought of him (I valued my ticket more than the satisfaction of telling him over the air of what I thought). There were patients in the shack (this was during the Vietnam war).

The folk who have assisted in NYC and Washington, DC, are the people who have my admiration. The callsign of choice should belong to those who have advanced amateur radio - not those who shell out the ten or twenty bucks for a callsign. Heck, the tests are so easy that anyone can be a tech inside of a week - I doubt a general would take more than a few - and an extra could probably be done in a month without a huge expenditure of effort. My gut feeling is that there should simply be a written test concerning rules and regulations - plus safety. After that, let folk earn the higher class by serving. Granted, not all will have the opportunity to do what some have done in New York, but there are other opportunities. Meanwhile, my hat's off to those who have aided in NY and Washington. All amateur radio operators should thank those who have performed under these conditions and shown the public that amateurs STILL have a function to perform today.

Aside from the emergency communications, there are those who have helped amateur radio in countless other ways. PSK-31 comes to mind. Ed Hare comes to mind - he's still in here slugging away despite many of our attempts to discredit the ARRL. Ed shared some good comments with me some while back, as well as some URLs. So - what have most of us done (myself included) for amateur radio lately?

Have at it & 73 from Rochester, NY
Jim AA2QA

Yeah. I don't believe that God is engaged in a game of "I told you I was right--I win!" with us. I don't know what's going on down at the United Church of Have A Nice Day but the Episcopal Church believes that Man has free will. Why ask God's forgiveness of your sins if the game was a setup and the outcome preordained?

Do you honestly believe that you are a windup toy?

If cell phones were not optimally placed, they would not be
effective before, during, or after an emergency. That's a
problem for the telephone provider and does not fit the
"cell phones are always down in an emergency" mantra.

Planning an Emergency Operations Center is a local thing.
That will vary from locality to locality. How does that enter
into this thread or is this the start of a new thread?

>>So, the US amateur radio service was "founded" on being an
>>emergency communications service? I don't think so...but I

...97.1 (b) to 97.1 (e) deserve as much attention as 97.1 (a), yes?

Key words are "recognition" and "value." The whole of 97.1 (a)
does not state that amateur radio IS an emergency
communications service, only that it CAN be. Nowhere else in
Part 97 is there any requirement that amateur radio BE an
emergency communications activity at all or even part times.

Looking up in the front of Title 47 CFR you will see a statement
that anyone can communicate, regardless of license, during
an emergency. Specifically such an emergency is imminent

danger to life or property.

>While I do not have my license at this time, I am not w/o knowledge
>of the subject, I have relatives that are/were hams, I have many local

>have the time in my life to sit down and get serious about it.

In this newsgroup, and possibly in other amateur taliban
environments, those who do not possess amateur radio
licenses "don't know anything about ham radio...and
probably never will." That's not my opinion. I'm just
reporting what others have said after their evening prayers.
:-)

>I agree with you that one shouldn't do things for grandizement (not sure

I think that approach is excellent and worthy of praise!

A number of others in here do not do that but continue in a
form of group self-aggrandizement wherein all toss general
praises back and forth, each congratulating the other on
their good works. Some insist such action is "truth." :-)

Good fortune on your future endeavors, Henry County
American Red Cross. I hope you never have to handle
any big emergency.

4728. ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-25 04:03:08 UTC
From: n2ey@aol.com
Message-ID: <20010925000308.10650.00000808@nso-fa.aol.com>
Source record: 20972

Here are some numbers to think about. These are the number of unexpired FCC ARS licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of September 22, 2001:

Novice - 41,178 (decrease of 8,151)
Tech - 230,606 (increase of 25,212)
Tech Plus - 88,477 (decrease of 40,383)
General - 137,904 (increase of 25,227)
Advanced - 87,405 (decrease of 12,737)
Extra - 97,133 (increase of 18,383)
Total - 682,343 (increase of 7,551)

In percentage terms, the fastest-growing class is the Extra and the fastest-shrinking class is the Tech Plus. In raw numerical terms, the fastest growing class is the General and the fastest-shrinking is again the Tech Plus.

No new Novice or Advanced licenses are being issued, so it is only logical that these numbers are shrinking. Additionally, while Technicians can earn credit for element 1, this is not reflected in the database as a Tech Plus, so those numbers will shrink as well.

4731. Volunteerism isn't exclusive to amateurs

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-25 05:31:37 UTC
From: lenover21@aol.com
Message-ID: <20010925013137.10771.00000143@nso-ba.aol.com>
Source record: 20975

The following is an excerpt from the R.F. Design Magazine e-mailer to subscribers on 24 September 2001. It isn't intended to prove anything other than a great number of people other than amateurs have contributed to rescue and rebuilding in the areas hit by the Attack on America.

Four employees of Raytheon Company, Lexington, Mass., perished on hijacked flights that crashed into the World Trade Center and the Pentagon on Sept. 11. The employees were: Peter Gay, 54, of Tewksbury, Mass., a vice president of operations for electronic systems based in Andover, Mass.; Stanley Hall, 68, of Clifton, Va., director of program management in Arlington, Va.; David P. Kovalcin, 42, of Hudson, N.H., senior mechanical engineer for electronic systems in Tewksbury, Mass.; and Kenneth E. Waldie, 46, of Methuen, Mass., senior quality control engineer for electronic systems in Andover, Mass.

"Our hearts go out to the families, friends and co-workers of those we have lost, and all who perished," said Raytheon chairman and CEO Dan Burnham.

Raytheon is providing help in relief efforts to both the families of the Raytheon victims and all victims of the national tragedy. Grief counseling and emotional support will be provided to the victims' families and employees through the company's Employee Assistance Program. Raytheon has volunteered several aircraft to fly needed supplies and experts and has donated 25 infrared cameras to New York's emergency response teams to aid in finding victims. The company has also established a special fund to provide gifts from Raytheon and its employees for disaster relief of all victims, and is providing disaster relief services through a grant the company made to the Red Cross earlier this year. A scholarship fund has been established for the children of Raytheon employees who were lost as well.

As recovery efforts continue in the wake of this national tragedy, Motorola has delivered at least 86 truckloads of communications equipment to field teams

and customers in the New York City area, Virginia and Maryland. In addition, seven planes carried Motorola equipment into the affected areas last week and over the weekend.

Also, three major communications systems were delivered, including a 900 MHz "trailer" radio system and an 800 MHz "trailer" radio system in New York city, and an 800 MHz "trailer" system which is being used at the plane crash site in Pennsylvania. These systems are similar to those used in the past for major sporting events. More recently, a fourth major system, an 800 MHz, 15-channel communications system was delivered to New York to provide back-up communications for emergency services. Motorola workers produced the system, which typically takes about three weeks to assemble, in 30 hours for shipment to the emergency areas.

Approximately 9,500 portable radios, 16,000 batteries and 3,000 chargers have been delivered so far. Further, about 120 base stations, and nearly 5,000 pieces of miscellaneous accessories, such as cabling and antennae equipment, have been delivered. Motorola has also delivered 700 Iridium satellite telephones to emergency agencies in the New York City area.

Motorola provided 1,000 cellular phones to a major insurance company for its policyholders in the affected areas. Motorola has also donated 10,000 iDEN multi-function phones to various federal, state and local government agencies, plus about 88,000 batteries, chargers and other accessories. Nextel will provide the phone service.

Futher, the Motorola Foundation will donate $1 million in support of relief efforts, dispersed to: New York Police, Fire & Rescue; the Federal Employee Education and Assistance Fund (World Trade Center / Pentagon Fund); General Relief Fund in New York; Abilities, Inc.; and Employee Match to the One Motorola Responds Fund.

Got news for you Cecil. The Extra class was never intended to be an
entry level license. That is why it was named Extra.

Jim, Tech Plusses are being renewed as Tech. If they didn't the Techs would have about a 15% renewal ratio.

Look, Dork. The *anyone* listening to my phone conversations was meant to imply any law enforcement, etc. But, if some bored putz wants to listen in on my phone conversations, they are welcome to it. It's quite simple for you to sit behind a keyboard and throw out your crap about freedoms, isn't it?

If you're not doing anything wrong (with wrong DEFINED--as you must have missed reading or comprehending in that post), then why would you care if law enforcement officials or government officials are listening to your phone conversations?

I speak the same topics on ham radio as I would over a telephone. Are you suggesting I should hide what I think and feel? Quite the freedom, dude, quite the freedom.

Well, it doesn't have to, as you will note it is rule number one.
kinda like the 10 commandments, they were not repeated either.
And yes emergency communications ARE mentioned later in the
rules/regs concerning ARES, RACES which are primarily EMERGENCY
use. ARES = Amateur Radio Emergency Service. RACES = Radio Amatueur
Civil Emergency Service. Now what part those to phrases do you not
understand?

It makes a lot of sense, though. As I recall, Jesus says more than once that His kingdom is "not of this world", obviously meaning that He wasn't going to start some sort of political revolution.
>
It should also be noted that Jesus never used His power to hurt anyone, only to heal. In the only recorded case where Jesus used force (driving the moneychangers from the temple) He did not use any sort of miracle or supernatural power.

Yup. Note, however, that the numbers posted do not include expired licenses in
the 2 year grace period, so the numbers of those classes can actually increase
if enough hams renew in a given month.

> Additionally, while Technicians can earn credit
>for
>element 1, this is not reflected in the database as a Tech Plus, so those

>technique of amateur radio so that they may demonstrate such to lesser class
>licensees. - They will have acquired sufficient operating and technical
>expertise that they fully "understand" the basic principles.

Maybe that's what was intended back 35-40 years ago, but things have changed
since then.

> Here is the
>point I am trying to make. When an extra class licensee is unable to build
>or erect a simple dipole antenna, I question the elite status of this
>individual.

Me, too. But since the tests for the license do not require such knowledge as a
condition of passing, it's not surprising.

>When an Extra Class licensee complains to me (a lowly Advanced
>Class) that my transmissions are causing RFI to his home theatre and that he
>does not transmit from his own station for fear of wiping out his own TV...
>I really have to wonder about the elite status of this individual???

Me, too. But the tests for the license do not require such knowledge.

>Apparently, at least some of these Extra Class elite operators are able to
>somehow memorize the questions and answers to the test(s) and obviously have
>NO PRACTICAL EXPERIENCE.

It's been that way for a long time. For all licenses.

Back in 1983 the FCC made the question and answer pools public. Even before
then, study guides gave a good indication of what was on the test. So anyone
could simply memorize rather than understand. FCC doesn't think it's a problem.

Also, all of the questions count the same, and there is no requirement that any
particular question or group of questions on the written test be answered
correctly in order to pass. So a person with complete ignorance of, say,
antennas can still pass by getting enough of the other questions right.

>I propose that there be an experience requirement
>levied upon all who seek the Extra Class License. While going from
>Technician to Extra Class in one day is quite a remarkable achievement, I
>feel that some element of 'experience' should be a requirement for Extra
>Class. Perhaps a requirement to have been a licensed ham for X number of
>years?

Until the mid-1970s, you had to have two years as a General or higher licensee before you could even TRY the Extra test. This was lowered to one year in the mid 1970s and eliminated a few years later. I remember, back in 1968, figuring out the exact date of the first FCC exam session in 1970 when I could try the Extra. Getting an Extra was no big deal, even back then.

The troubles with an experience requirement are several:

- It makes hams go back to a second test session no matter how skilled and knowledgeable they are at the first session
- It's no guarantee of any practical experience
- It's an additional administrative thing to keep track of.
- It will discourage new hams from upgrading
- Even with such a requirement, hams will be able to get Extras with huge gaps in their knowledge.

> I can readily forsee where ham radio will be comprised of all chiefs
>and no indians...I hope I never see that day.

Why? I say, the more the merrier!

> With Code Quick, you bypass the drudgery of memorizing dits and dahs.

Memorizing dits and dahs is a mistake. What needs to be learned is the
sound of each character as a unit. Just as a child learning to talk
hears "cat" as one sound, not as three.

> It's silly and over-the-top, and that is why it works. You use cutesy

Let's look at it again:

"there simply is NO reason for the vast majority of hams to ever learn
CW."

Looks pretty hostile to CW to me. The statement isn't about testing or
regulation at all, it's about learning, or not learning, CW.

> The
> issue or point is that whatever reasons exist, they are (as you
> correctly state) insufficient to justify a code test.

According to the FCC, anyway. But that's a completely different issue!
Many things in ham radio are worth learning but are not tested.

> >>Indeed, not one
> >>arguement to sustain code requirements seems to have been

> >ham who skipped the Novice step does not. Same for the holder of an Element 1
> >CSCE more than 365 days old. Huh?
>
> Yep, that seems to be possible.

Yup. I'm as pro-code-test as they come, but it makes absolutely no
sense to me.

FCC will accept for credit a code test done by a single volunteer
examiner 50 years ago (the hypothetical case of a 1951 mail-order
Novice who let the license lapse) but won't accept for credit an
Element 1 CSCE from a ham tested by 3 or more VEs just 366 days ago.
FCC also won't accept ANY non-Novice lapsed-license test results, even
if the test was given by FCC officials themselves (the hypothetical
case of a ham who passed 5, 13 or 20 wpm at an FCC office but bypassed
the Novice).

My point is that just because FCC says it doesn't make it right. Just
the law.

> test......

Well, Jim (harumph, geeeeeze...) if these "slackers" would just buckle down and practice, practice, practice it won't be too long before they will be clipping along nicely, plotting 20 loci/hr and enjoying every minute of it. It will seem like a second language to them.

Of course, nothing compares to actually getting on the air with the Smith Chart. Indeed one of the most fondly remembered traditions is recreated every New Year's Eve when the OD (old designer) dusts off his beloved General Radio 874 and heads out to his antenna range for Slotted Line Night (SLN). There, in the cramped, screened-in Faraday cage beneath the 1/24 scale model of the three-element, 160-meter beam he will one day put up, he finally achieves the VSWR bandwidth he always knew was possible, waiting to be patiently tweaked out by individual technical skill. It is a rare satisfaction that he shares with the fiery-cold stars overhead and the mute icicles clinging to the test tower guys as he begins the long, far-field walk over crunching, frozen ground back to a warm, inviting hamshack.

All of this will be lost if we outlaw use of the Smith Chart!

You really need to learn how to read, Dick. I didn't say anything

about an "entry level license". The Extra class *EXAM* is a
"minimum entry level exam" into the Extra class, i.e. it is based
on minimum requirements. Why do you have so much trouble with that
concept? Anyone who barely squeaks by gets the same license as
I who scored 100% on the exam.

With all due respect, what *is* "American culture"?

It is a mixture and a blend of many cultures, mostly European, but increasingly Asian and African as we gain more Americans from those backgrounds.

My background, Russian/German, is the pervasive culture even today in the rural community where my parents and grandparents settled 80 years ago. When I was a child I didn't know anyone over the age of 40 whose native tungue was English, yet out of that small farming community have come a Medal of Honor recipient, a state governor, dozens of career military people, a congressman, and other significant contributors to the American way of life. The US flag waves high and proud on silo's, front porches, and main street light poles, and the nearby Army recruiting office has exceeded goal in each of the past 30 years except 1973.

But many of the "old timers" still have Russian or German as their first language, and one Lutheran church still conducts one service each week in German. Shame on them!

With all kind wishes,

de Hans, K0HB

I think you're onto something here Bill. All the new autos are electronically controlled by a computer. It's been about 10 years since mechanical pressure links controled the shifting functions. Now, when the EMP from the big one hits, those controllers are all toast, and none of our autos are going to shift out of first, or second gear. But those of us with 5-speed manuals, we've got it made.....if we were just alive after the nucleur blast.... small details :_)

>> to REQUIRE English as a COMPETENT language for ALL American citizens or
>> permanent residents.

"...not disallow..." As in to not prohibit.

Now, what part of that do you and Hans seem to have a problem with?

My "position" is that I believe that if you elect to live here, ONE common language should be set and then ALL citizens should be at least functionally literate in that language.

>Consider two French
>married tourists who get arrested for speaking French in public
>in the US.

Consider my earlier post where I specifically addressed that EVERY accomodation should be made for tourists, invited guests and persons solicited for business purposes.

Please...go back and re-read them.

>Consider the FBI staking out public parks trying to
>catch and arrest anyone speaking a language other than English.

Consider that you have been reading too much conspiracy-theory stuff again!

>That certainly sounds Hitler-like to me.

If I had saud "prohibit", then you'd be right. I did NOT, there for you aren't.

It stands to reason, Steve. Since God communicated with men long
before English was invented, English is not God's preferred language.
If English had been God's preferred language, it would have been one
of the languages spoken immediately after the Tower of Babel incident.
So I think we should force everyone in this country to speak God's
preferred language, the language he used to communicate with Adam
and Eve.

Nice try, Doc.

Lennie the Lid insists that the Basis and Purpose of Part 97 exist simply
to satisfy some administrative legalese and have no REAL implication in Amateur
Radio.

Lennie likes to convieniently ignore facts in deference to his opinions.

>I agree with you that one shouldn't do things for grandizement (not sure
>thats the right word), sure I have been in the paper a few times locally,
>as well as the TV.

Lennie believes that if you are not on Page 2 of the Los Angeles Times or
the lead item on the 6 o'clock news, it didn't happen or it wasn't important
enough to warrant discussion.

>He took his own money and got the parts to fix her stove, and then went
>out and bought all her kids presents. We put him in for an award, he
>refused to accept it, to him just seeing them smile is all the reward he
>needs.

I know many Hams like that. I know many PEOPLE like that. We could fill
every page of every newspaper (or make them too bulky to carry!) if we put
nothing but "human interest" articles in there.

Lennie wouldn't read it unless it was about Morse Code.

Source record: 21010

Heh - I can't make the same claim. I didn't take a calculator and one of the VEs offered me a calculator for the dumb resonant frequency questions. Hmmm - there had to be a hundred keys on that thing. So, I simply put some checks in boxes. I knew I had the other answers correct - and one doesn't need to score 100%. I watched out of the corners of my eyeballs when it was scored. The guy grading the test got a long ways towards the end before, suddenly, he started ticking off incorrect answers. Of course, those were the resonant frequency questions. Heck, I didn't want to spend the time to figure the calculator out and I didn't want to extract the square roots by hand (I can, but it is time consuming). I didn't want to spend the extra time. It still took over 3 hours of testing from ground zero and I still passed. If that is good enough for the FCC, it is good enough for me. Hmm ... IEEE.org? You had to sleep through that test!

Obviously you ahve never seen the terain in some parts of West Virginia.
Some of the most beautiful in the United States, but also very rugged. You
can't cover every possible acre of territory.

>Planning an Emergency Operations Center is a local thing.
>That will vary from locality to locality. How does that enter
>into this thread or is this the start of a new thread?

Hmmmm....Yes, now let's see...the THREAD is about Ham Radio in this
terrorist crisis. Now HOW does "Ham Radio" and discussions about "EOC's" fit
together...Hmmm....let me think...

>Key words are "recognition" and "value." The whole of 97.1 (a)
>does not state that amateur radio IS an emergency
>communications service, only that it CAN be.

See what I meant, Doc..?!?! Any chance to belittle or undermine Amateur
Radio and Lennie will take it....

>Looking up in the front of Title 47 CFR you will see a statement
>that anyone can communicate, regardless of license, during
>an emergency. Specifically such an emergency is imminent
>danger to life or property.

Yep...for that instance and that instance only. The FCC has been
extremely clear on this. And they have ALSO stated that it is contrary to the
scope of ANY radio service to install a radio transmitter for which you are not
licensed PRIOR to an emergency without obtaining licensure for that radio
station.

>In this newsgroup, and possibly in other amateur taliban
>environments, those who do not possess amateur radio
>licenses "don't know anything about ham radio...and
>probably never will." That's not my opinion.

Of course it's not your opinion, Lennie. Because YOU are the one who insists that you don't need to be involved in Amateur matters to know anything about it, then you CONSISTENTLY make errors ABOUT Amateur Radio that anyone who IS involed knows better.

YOU are the fool, but you refuse to do anything about it.

>I'm just
>reporting what others have said after their evening prayers.

And you are in a position to "recieve" these prayers HOW?

4768. Re: ARS License Numbers

Richard, if someone holds a technician license (still current, being renewed now and then) which was issued back in the 60s, wouldn't they only have to file paperwork and automatically be upgraded to general? I believe back then the only difference was the code test (the licenses were novice, 1 year non-renewable, technicial, 5 wpm with general theory, and general with its' 13 wpm requirement). This would not, of course, apply to most tech tickets currently held.

>It isn't intended to prove anything other than a great number of people other
than amateurs have contributed to rescue and rebuilding in the areas hit by the
Attack on America.

Anderson, you scumbag, this NG is ABOUT Amateur Radio! NOT The Red Cross,
FDNY, NYPD, Salvation Army, etc. it is absolutely reasonable that we discuss
the activities of organizations and people we know.

WE (yes, WE) know that there are tens-of-thousands of volunteers from all
walks in all professions and avocations who are out there, and the great
majority of them do NOT have an Amateur Radio license nor even KNOW what
Amateur Radio is about.

Only YOU, you would try to demean, belittle and denigrate the efforts of
ANY of those volunteers.

NO ONE in this forum, I reiterate NO ONE has made even the REMOTEST
suggestion that "only" Amateur Radio is involved in this effort.

You get even more disgusting and ugly as the days go by, you sadistist
punk.
